Authorities, 306
Authorization:
levels of, 306
tasks and required authorizations, 307–308
Autocommit option in DB2 CLP, 477
AUTOCONFIGURE command, 517
Automatic Summary Tables, 402
Availability enhancements, 280–288
incremental maintenance of materialized query tables
during load append, 283–285
online index reorganization, 285–288
online table load, 280–283
online table reorganization, 285
Available disk space, and data placement, 68
AVG_APPLS, 581–582
background, 581
configuring, 581
monitoring, 581–582
AWE, 80, 87
Backup, checking, DB utility for, 656–658
Backup domain controllers (BDCs), 338–339
installing DB2 on, 347–348
using with DB2, 345
BACKUP parameter, LIST HISTORY utility, 663
Backup and recovery strategy, 169–201
active logs, 171
backup frequency, 170–172, 175–180
crash recovery, 171, 183
disaster recovery, 171, 183
incremental backup and recovery, 186–201
keeping related data together, 175
operating system, 175
recovery history file, 172–173
rollforward recovery, 171, 184–186
storage, 174–175
version recovery, 183–184
Backups, 201–210
authorities required to use backup, 204
backing up to named pipes, 206–207
backing up to tape, 206
backup database examples, 207–209
BACKUP command, 210
BACKUP DATABASE command, 201
backup information, displaying, 204
backup performance, optimizing, 209–210
offline vs. online backup, 210
running the backup utility, 204–206
Base distinguished name (baseDN), 700
Basic Local Alignment Search Tool (BLAST), 442
BDCs, See Backup domain controllers (BDCs)
BEGIN NEW STRIPE SET option, ALTER TABLESPACE command, 30–31, 34–37, 52–53
BETWEEN sn1 AND sn2 parameter, db2adutl, 654
Binary large objects (BLOBs), 478
BIND, 307
BINDADD, 307, 690
BLAST (Basic Local Alignment Search Tool), 442
Block dimension index, 368
BLOCK predicates, 427
Block-based buffer pools:
altering, 82
limitations of, 80–81
and sequential prefetching, 91–92
Blocking factor, 352
BLOCKSIZE option:
ALTER BUFFERPOOL statement, 90
CREATE BUFFERPOOL statement, 79–80
Broadcast table joins, 397–400
Buffer pool hit ratio, 84, 104–105
Buffer pools, 10, 77–112
ALTER BUFFERPOOL statement, 79, 82, 89–90
altering, 89–91
block-based buffer pools:
altering, 82
limitations of, 80–81
and sequential prefetching, 91–92
CREATE BUFFERPOOL statement, 79–80
creating, 79–83
hidden, 88–90
monitoring activity, 100–102
multiple, 84–85
number to configure for database, 83–84
overhead, 85
page cleaning, 99–100
changed page threshold tuning, 100
dirty page steals, 100
LSN gap, 99–100
page cleaners
choosing the number of, 100
triggering, 99, 110–111
prefetching, 94–99
defined, 94
example, 97–98
how it works, 95–99
list prefetching, 96
optimal prefetch size, choosing, 96–97
prefetch queue, 96
prefetchers, 95, 97, 98–99
range prefetching, 95
system catalog views relating to, 92–94
SYSCAT BUFFERPOOLDBPARTITIONS view, 92–93
SYSCAT BUFFERPOOLS view, 92–93
32- and 64-bit considerations, 85–88
maximizing buffer pool size on Windows, 87–88
shared memories/buffer pool limits, 85–87
tuning, 102–112
asynchronous pages per write, 111–112
asynchronous read ratio, 106–108
buffer pool hit ratio, 104–105
data hit ratio, 105–106
index hit ratio, 105
page cleaner triggers, 110–111
physical read rate, 108
read time, 108–109
usage, 78–79
bufferno-pool-name option:
  ALTER BUFFERPOOL statement, 89–90
  CREATE BUFFERPOOL statement, 79
BUFFPAGE, 82, 551–552, 624, 634, 647, 703
  background, 551
  configuring, 552
  monitoring, 552

CATALOG DATABASE command, 466
CATALOG LDAP DATABASE command, 324
Catalog statistics, 497
  updating, 515–516
Catalog table space, 9–10
CATALOG TCP/IP NODE command, 466
CATALOGCACHE_SZ, 578–579
  background, 578
  configuring, 578
  monitoring, 578–579
Character large objects (CLOBs), 478
  background, 579–581
  configuring, 579
  monitoring, 580–581
Circuit level proxy firewalls, 311
CLIENT, 301–302, 303, 320
  TRUST_ALLCLNTS, 301–303
  TRUST_CLNTAUTH, 302, 305
CLP commands, 662–665
  ARCHIVE LOG utility, 662–663
  LIST HISTORY utility, 663–665
  ONLINE utility, 665–666
  PRUNE HISTORY/LOGFILE utility, 665–666
  UPDATE HISTORY FILE utility, 666–667
Cluster friendly applications, 266
Collocated table joins, 385–390
Collocated tables, partitioning keys, 134–135
Column options, 453
  federated system, 453
Column-level encryption (CLE), 329–330
Columns, 2
Command line processor (CLP), 653
COMMENT new-command, UPDATE HISTORY FILE utility, 667
COMMIT statement, 476–477
Common job responsibilities, 307
Compensation, federated system, 445–446
Complete trust model, 342
Configurable online configuration parameters, 681–685
  DAS configuration parameters, 685
  Database Manager parameters, 683–684
  database parameters, 684–685
Configuration Assistant, 613, 617
Configuration parameter, cached information available by, 312
Configuration parameter performance impact, 518
Configuration parameter tuning, 516–550
  agent pool size (NUM_POOLAGENTS), 531–542
  background, 531–532
  configuring, 540
  DB2 connection concentrator, 532–540
  monitoring, 540–542
application support layer heap size (ASLHEAPSZ), 517–519
  background, 517–518
  configuring, 518–519
  monitoring, 519
configuration parameter performance impact, 518
database manager configuration parameter tuning and monitoring, 517
enable intra-partition parallelism (INTRA_PARALLEL), 526
  background, 526
  configuring, 526
  monitoring, 526
initial number of agents in agent pool (NUM_INITAGENTS), 542–544
  background, 542
  configuring, 542
  monitoring, 543–544
keep fenced process (KEEPFENCED), 548–549
  background, 548
  configuring, 549
maximum query degree of parallelism (MAX_QUERYDEGREE), 527–528
  background, 527
  configuring, 527
  monitoring, 527
maximum total of files open (MAXFILOP), 549–550
  background, 549
  configuring, 549–550
  monitoring, 550
number of FCM buffers (FCM_NUM_BUFFERS), 529–531
  background, 529–530
  configuring, 530
  monitoring, 530–531
priority of agents (AGENTPRI), 545–547
  background, 545
  configuring, 545–546
  monitoring, 546–547
query heap size (QUERY_HEAP_SZ), 528–529
  background, 528
  configuring, 528–529
  monitoring, 529
requester I/O block size (RQIOBLK), 519–520
  background, 519
  configuring, 520
  monitoring, 520
soft heap threshold (SHEAPTHRES), 520–525
  background, 520–522
  configuring, 523–524
  monitoring, 524–525
  overflowed vs. non-overflowed, 522
  piped vs. non-piped, 522–523
CONNECT, 307
CONNECT privilege, 307
Connections page, DB Configuration Advisor, 509–510
Consistency, across partitions, 306
Consult Line, DB2, 705
Container tag, 12, 17
Containers, 7
CONTAINING object_name, LIST HISTORY utility, 664
CONTAINING schema-object_name parameter, LIST HISTORY utility, 664
CONTROL privilege, 306, 475, 477–480
Coordinator partitions, 122–123
CPU SPEED, 595
Crash recovery, 170–172, 175–180
Crash tolerant applications, 266
CREATE ALIAS statement, 489
CREATE BUFFERPOOL statement, 79–80, 88
ALL DBPARTITIONNUMS option, 79
BLOCKSIZE option, 79–80
bufferpool-name option, 79
DEFERRED option, 79
NUMBLOCKPAGES option, 79–80
SIZE option, 79
CREATE DATABASE command, 3–5, 9
CREATE DATABASE PARTITION GROUP statement, 59–60, 64
CREATE FUNCTION MAPPING statement, 456
CREATE FUNCTION statement, 456
CREATE INDEX SPECIFICATION ONLY statement, 496
CREATE INDEX statement, 457, 496, 627, 629, 631
CREATE NICKNAME statement, 452, 471, 474, 488
CREATE SERVER statement, 467–468, 474, 487
CREATE statements, 308
CREATE TABLE statement, 10, 408
CREATE TABLESPACE parameter, LIST HISTORY utility, 663
CREATE TABLESPACE statement, 53
EXTENTSIZES parameter, 7
CREATE USER MAPPING statement, 451, 471, 487
CREATE WRAPPER statement, 486
CREATEIN privilege, 307, 476
CREATETAB, 307
Creating a view on a nickname, 475
CTLIB wrappers, 455
CURRENT DEGREE special register, 114
Customized partitioning maps, 129

D2LDAP_SEARCH_SCOPE, 322
d2ldcfg utility, 316
DAS configuration parameters, 685
dasict, 608
Data Encryption Standard (DES), 303
Data hit ratio, 105–106
Data manipulation, 77–135
buffer pools, 77–112
data objects, types of, 127–135
parallelism, 112–127
Data objects:
partition maps, 127–130
customized, 129
partitioning keys, 131–135
changing, 133
choosing, 131
collocated tables, 134–135
examples, 132–133
and indexes, 154
specifying, 131
tables, 127, 136
types of, 127–135
Data parallelism, 113
Data placement, 67–70
available disk space, 68
log placement, 69
number of physical disks available for the database, 68
rate of growth, 68–69
table-to-table space assignments, 69–70
workload, 67–68
DATA predicates, 427
Data protection, 349
Data storage, 1–76
Data type mappings, federated system, 454
Database administrator, 307
Database availability, 137–295
active log, 152, 171
archived log, 152
availability enhancements, 280–288
incremental maintenance of materialized query tables during load append, 283–285
online index reorganization, 285–288
online table load, 280–283
online table reorganization, 285
backup and recovery strategy, 169–201
active logs, 171
backup frequency, 173–174
crash recovery, 175–180
disaster recovery, 171, 183
incremental backup and recovery, 186–201
keeping related data together, 175
operating system, 175
point-in-time recovery, 185
recovery, 170–173
recovery history file, 172–173
rollforward recovery, 184–186
storage, 174–175
version recovery, 171, 183–184
backups, 201–210
authorities required to use backup, 204
backing up to named pipes, 206–207
backing up to tape, 206
backup database examples, 207–209
BACKUP command, 210
BACKUP DATABASE command, 201
backup information, displaying, 204
backup performance, optimizing, 209–210
offline vs. online backup, 210
running the backup utility, 204–206
db2dart, ability to use, 288–295
high-availability clustering, 227–280
on AIX, 239–254
clustered servers for high availability, 256–260
Index

with DB2 ESE, 269–270

db2inidb tool, 230

on HP/UX, 276–280

idle standby, 228

multiple DB2 instances, configuration of, 275–276

mutual takeover, 228–229

sample configurations with Sun Cluster 3.x and DB2 UDB, 271–274

split mirror, 229

split mirror as a backup image, 237–239

split mirror to clone a database, 233–235

split mirror as a standby database, 235–237

Sun Cluster 3.0 DB2-HA Agent packages, 270–271

on Sun Solaris, 261–265

suspend I/O feature, 229–230

through log shipping, 231–232

through online split mirror and suspended I/O support, 232–233

on VERITAS cluster server, 265–269

on Windows, 254–256

logs, 137–169

archive logging, 138

archiving log files with a user exit program, 149–151

blocking transactions when log directory file is full, 154

circular logging, 137–138

declared global temporary tables (DGTTs), 147–148

example, 157–164

log buffer size (LOGBUFSZ), 142

log file allocation and removal, 152–153

log file size (LOGFILSZ), 141–142

log files, managing, 148

log files, preventing loss of, 157

log mirroring, 144–145

new log path (NEWLOGPATH), 143

NOT LOGGED INITIALL parameter, 146–147

number of commits to group (MINCOMMIT), 142–143

offline archival log files, 139

on demand log archive, 154–155

online archival log files, 139

overflow log path (OVERFLOWLOGPATH), 144

primary logs (LOGPRIMARY), 140

raw logs, 155–157

secondary logs (LOGSECOND), 140–141

truncated logs, 151–152

restore, 211–223

authorities required to use restore, 211–212

to a damaged partition, 223

of existing database, 218–219

incremental restore, using in a test and production environment, 212–215

to a new database, 219

optimizing restore performance, 222

RESTORE command considerations, 223

RESTORE DATABASE command, 211–212

restore examples, 219–222

table space containers, redefining during restore operation, 216–218

rollforward, 223–227

authorities required to use restore, 225

rollforward database examples, 226–227

using the utility, 225–226

Database backup, 201–210, 656–658

Database communications, 597–619

database partition configuration file (db2nodes.cfg), 597–599

and Windows, 599

DB2 client:

configuring in a three-tier environment, 616–617

configuring in a two-tier environment, 615–616

installing and configuring to DB2 host communications, 614

installing and configuring to DB2 server communications, 613

DB2 Connect Personal Edition, installing, 615

DB2 server, installing, 605–610

default port range, 599–602

FCM communication buffers, 617–619

overallocated, example of, 618–619

non-partitioned database environment, 603–605

partitioned database environment, 606–610

installing the DB2 server, 607–610

preparing for installation, 606–607

post-installation setup, 610–612

verifying the installation, 611–612

two-tier environment, configuring DB2 clients in, 615–616

Database configuration parameter tuning and monitoring, 550–582

application heap size (APPLHEAPSZ), 554–555

background, 554–555

configuring, 555

monitoring, 555

average number of active applications (AVG_APPLS), 581–582

background, 581

configuring, 581

monitoring, 581–582

catalog cache size (CATALOGCACHE_SZ), 578–579

background, 578

configuring, 578

monitoring, 578–579

changed pages threshold (CHNGPGS_THRESH), 579–581

background, 579–581

configuring, 579

monitoring, 580–581

default buffer pool size (BUFFPAGE), 551–552

background, 551

configuring, 552

monitoring, 552

locking (LOCKLIST, MAXLOCKS, LOCKTIMEOUT, DLCHKTIME), 559–565
log buffer size (LOGBUFSZ), 552–554
background, 552
configuring, 552
monitoring, 553–554
number of asynchronous page cleaners (NUM_IOCLEANERS), 566–570
asynchronous pages per write, 570
background, 566
configuring, 567
monitoring, 567–569
page cleaner triggering, 566–567
number of commits to group (MINCOMMIT), 576–577
background, 576
configuring, 576–577
monitoring, 577
number of I/O servers (NUM_IOSERVERS), 570–576
background, 570–571
configuring, 571
monitoring, 571–574
physical read rate, 574
read time, 575
security, 324–325
sorting (SORTHEAP, SHEAPTHRES_SHR), 555–559
