A

Administrative API, 130, 232

Context management APIs, 230–231, 230t
functional categories, 219–220, 229–230
additional APIs functions, 228t–229t
Application Preparation functions, 226t
Client-Server Directory Management functions, 222t–223t
Data Utilities functions, 225t
Database Control functions, 220t–221t
Database Directory Management functions, 221t–222t
Database Manager Control functions, 220t
Database Manager and Database Configuration functions, 221t
Database Monitoring functions, 224t
Database Partition Group Management functions, 228t
General Application Programming functions, 225t–226t
Health Monitoring functions, 224t–225t
Network Support functions, 223t
Node Management functions, 228t
Operational Utilities functions, 224t
Recovery functions, 223t–224t
Remote Server Utilities functions, 226t
Satellite functions, 228t
Table Space Management functions, 227t–228t
ADO (ActiveX Data Objects/Microsoft), 133, 162
ALL, 76, 84
ALLOW REVERSE SCANS, 62
ALTER DDL statement, 46
ALTER TABLE, 59–60
LOCKSIZE parameter, 124
ANY, 84
Application building steps (embedded SQL application), 204, 205f
binding applications, 209–210
dynamic SQL dynamic authorization considerations, 211–212
packages and timestamps examination, 212–214
static SQL authorization considerations, 210–211, 210t
binding utilities, 214–215
blocking, 215–216
embedded SQL file extensions, 204t
multiple database transactions connection, 208–209
package caching, 216
precompiling source modules, 205–208
Application Framework, 5

391
Application troubleshooting, 381A
  diagnostic error files, 382A–384A
  error location, 382A
  SQL error, 381A–382A
  tracing facilities, 384A–388A

Atomicity, 113

AUTOCOMMIT, 161

B

Base tables, 46

BIGINT, 48–49

Binding
  applications, 209
  case example, 209–214
  bind file, 206–207, 206f, 313
  column binding offsets, 265, 267
  parameters, 252–253, 266f
    column-wise array insert, 253–254, 254f
    row-wise array insert, 253, 254–255, 256f
  utilities, 214–215
  see also CLP

BLOB, 51
  in JDBC programming, 291

Blocking, 215–216

Bookmark, 257
  and scrollable cursors, 261–263

C

CA (Configuration Assistant), 35
  accessing servers, 35–36, 36f
CALL, 98–100

Call Level Interfaces see CLI/ODBC

Cartesian product, 91–93

CASE expressions, 87

Certification Test see DB2 UDB v8 Certification Test

CHAR, 49–50

CLI advanced programming features, 249
  catalog functions, 250–251, 251t
  cursor types supported, 249
    keyset-driven, 249–250
    static/read-only, 249
  decision factors on cursor type, 250
  executing statements, 252
  binding parameters, 252–253
  preparing, 252
  retrieving diagnostic information, 255–256
  retrieving results into an array, 263–267, 266f
  retrieving results (scrollable cursors), 256–259, 257f–258t, 258f
  trace, 385A–387A

CLI application basic program flow, 240–241
  diagnostics and error processing, 247–248
    case example, 248–249
    function return codes, 247t
  general tasks, 241
  initialization task, 241f
  initialization tasks
    connecting to data source/s, 242–243
    initializing handle types, 242
  termination tasks, 241f, 243
  transaction processing tasks, 243, 244f
    allocation statement handle/s, 243
    end transaction, 246–247
    prepare/execute SQL statements, 243–245
    process results, 245–246

CLI/ODBC, 132–133, 233, 234, 235f

CLI vs. embedded SQL, 234–237

CLI environment set up steps, 237
  bind files, 238–239, 238t
  configuring CLI, 239
  database cataloging, 238
  DB2 UDB installation, 237–238
  configuring for Perl environment, 313–314
  DB2 database access via ODBC, 239–240
  and DUOW, 164–165
  ODBC development considerations, 240
  transactional processing, 157–159
  scenarios, 159f–160t
  see also CLI application basic program flow

CLOB, 50
  in JDBC programming, 291

CLP, 214, 333

CONNECT RESET, 179–180

Context Management API, 130

CREATE DDL statement, 46

CREATE VIEW, 63
Index

Cursor types/scope, 145
  and application locking, 193
  multiple usage, 192–193
  positioning, 191–192
  scrollable cursor application, 259–260
    case example, 260–261
  types, 189–190, 269
    case example, 190–191
  usage, 188–189
see also CLI advanced programming features

data concurrency, 113, 125
  issues, 115
    lost update, 115–117
    nonrepeatable read, 117
    phantom read, 117–118
    scenario example, 114–115
    uncommitted read, 117
  levels of protection, 118
see also Locking strategies

Data retrieval see SQL

Data types, 46–47, 48f
  built-in categories, 47
  date and time, 51–52
    date, 52, 52t
    time, 51, 52, 52t
  timestamp, 51, 53
  default values, 55
  external file data, 53
  generated columns, 55
  identity columns, 55
  null value considerations, 54, 61
  numeric, 47
    big integer, 48–49
    decimal, 49
    double-precision floating point, 49
    integer, 47–48
    single-precision floating point, 49
    small integer, 47
  selection, 54, 54t
  string, 49
    binary large objects, 51
    character large object, 50
    double-byte character, 50–51
  double-byte character large objects, 51
  fixed-length character, 49–50
  varying-length character, 50
  varying-length long character, 50
  user-defined categories, 47
  distinct types (UDTs), 47, 53
  reference types, 47
  structured types, 47

Database objects
  case sensitivity in names of, 66–67
  create/change/delete tasks, 46
  types; see also Indexes; Schemas; Tables; Views

DATALINK, 53
