Index

A
Abstract message operations, 205–206
Abstraction, of WSDL, 204, 216, 219
AcceptSocket method, 136
AcceptTcpClient method, 136
<Ack> element, 286
action element, 243
actor attribute, 178, 198
and routing, 239
AddressType attribute, 150
AES (Advanced Encryption Standard), 255
<all> element, 168
Apache Axis, 300
Apache SOAP, 7
Application object, 34
Architecture, 4–5
Web service, 12–13
Arrays
partially transmitted and sparse, 183
wrapper for, 183
with XML serialization, 101–104
ASP.NET
extension mechanisms in, 38–39
procedures for using, 34–38
ASP.NET Web Services, 29, 296
building, 34
caching by, 311
cookies in, 279–280
and HTTP sessions, 276–277
interoperability issues, 300
roadmap to, 33–34
ASP’s (Active Server Pages), 276
Asymmetric encryption, 257–258
AsymmetricAlgorithm class, 257
Asynchronous methods, 53–54
caveats regarding, 53
clients using, 79–81
implementation of, 54–60
SOAP headers and, 197–199
AsyncResult object, 80
Attachments, DIME and, 247–249
Attributes
adding description through, 203–204
namespaces of, 101
qualifying of, 151
searching for, 163
types of, 100
XML, 100–101
of XML document element, 149
in XML schema, 202–203
Audience–centered design, 299–301
Authentication, 177
components of, 254
defined, 254
Authentication headers, 55–56
Authorization, defined, 254
authorizedName, in tModel, 226
Axis (Apache), 300

B
Bare parameter style, 42–43
element of, 44–45
SOAP request-response for, 43
BeginInvoke method, 80
Binary security token, 268, 269
BinarySecurityToken, 270
attributes of, 270–271
sample of, 271
Binding, 52
using, 53
.binding> section, of WSDL document, 29, 206
element of, 211
example of, 211
policy information in, 216–217
use of, 210–211
bindingTemplate type, 224
bindingTemplates, in businessService, 225
.Body> element, 23, 176
and routing, 238–239
Bridges, 178
Browser-based computing, xiv
importance of, xv
Browsing operations, 227
Business logic, using, 309–310
businessEntity type, 224
businessService type, 224, 225
businessServices, 224

C
CacheDuration property, 310–311
Caching, 310
by ASP.NET, 311
CanDeserialize method, 94–95
Canonicalization, in signature, 265
Capitalism, xiii
categoryBag type, 224
in businessEntity, 224
in businessService, 225
in tModel, 226
ChainStream method, 121
CheckUserAgentModule_BeginRequest
method, 128–129
Child tag, 22
.choice> element, 168
Claim, defined, 266
Classes
creating from schemas, 106–108
wrapper for, 183
Client error code, 181
Clients
creating using .NET Framework SDK, 65–71
creating using Visual Studio .NET, 72–74
document-encoded, 76–77
document-literal, 74–76
exception handling on, 81–83
extending and customizing, 83–85
manual creation of, 74–81
one-way, 78–79
RPC-encoded, 77–78
that use asynchronous methods, 79–81
code element, 242
COM (Component Object Model), 3
CompleteRequest method, 129
Create method, of WebRequest class, 142
Create(String Url), 144
CryptoStream object, 255

D
Data types, 20
defining, 166–167
implicitly defining, 167
interoperability issues, 301–302
versioning of, 305, 307–309
DataSet object, 301
DCOM (Distributed Component Object Model), 3, 295–296
Decrypt method, 258
Delphi 6, 7
description, in tModel, 226
Description formatter, 121–122
**Deserialize** method, 89, 94
Design
  business logic in, 309–310
  caching, 310–311
  for interoperability, 299–305
  for performance, 295–299
  versioning in, 305–309
**<detail>**, of fault, 180
Dialogues, 289
  defined, 291
  use of, 291–293
**DidUnderstand** property, 58
**Digest** method, 264
Digital signature, 262
  creating, 263
  using with SOAP, 268
  verifying, 263
  with WS-Security, 272
DIME (Direct Internet Message Encapsulation), 247
  anatomy of message in, 248
  and SOAP, 248–250
DISCO (Web Services Discovery Language), 33, 38, 65–67
disco.exe, 65
  using, 66–67
.discomap, 67, 68
Discovery, 221
  ad hoc, 221, 232
  context of, 222
  using UDDI, 222–229
  using WS-Inspection, 229–231
discoveryURLs, in **businessEntity**, 224
Distributed application development, 2–3
DNS (domain name system), 12
Document extensions, 203–204
Document passing, 24
Document-encoded clients, 76–77
  Web services, 45–47
Document-literal clients, building, 74–76
Document-literal services
  building, 40–45
  programming model for, 41
DOM (Document Object Model)-based programming, 154, 161–163
**DownloadData** method, 142
**DownloadFile** method, 142
**DTDs** (document type definitions), 153
disadvantages of, 164

**E**
Element
  adding description through, 203–204
  of XML document, 149
Element name, 18
**ElementName** property, 102
Encoded SOAP, 25
  interoperability issues, 303
Encoded XML, 95
  and remote method calls, 181–184
  serialization of, 95–97
**encodingStyle** attribute, 187
**encodingType** attribute, of
  **BinarySecurityToken**, 270, 271
Encrypt method, 257
**EncryptedData** element, 260–261
Encryption
  private key, 254–257
  public key, 254, 257–258
  symmetric, 255
  in WS-Security, 272
XML, 258–261
**EndInvoke** method, 80
**Envelope** class, 190–194
  using, 196–197
Enveloping, 176–180
EOF (end-of-file), 154
Error handling, 10
  on client, 81–83
  in SOAP, 11, 40, 60–62, 180–181
Eventing, 275
Exceptions, handling by SOAP, 40
Extensibility, of WSDL, 202–204
Extension class, creating, 116
Extension formatters, 122, 123
Extension reflectors, 122, 123

**<Fault>** element, 11, 180
**<faultcode>**, 180
**<faultfactor>**, 180
**<faultstring>**, 180
Federation, 12
Fell, Simon, 300
INDEX

Fields, serialization of, 100–101
Firewalls, 178
found element, 242
Freenet, 13
Fully qualified name (FQN), 151–152

G
GET verb, 16, 141
GetAttribute, 157
GetWebRequest method, 83
  overriding, 126
GLUE (The Mind Electric), 7
Gnutella, 13
GUID (Global Unique Identifier), 30, 223, 276

H
Hash
  creating, 261–262
  defined, 262
Header, session, 278, 279, 281–283
<Header> element, 177–178
  and routing, 238–239
Headers, 23
  authentication, 55–56
  defined, 17
  SOAP, 11, 54–60
Homing pigeons, 23
href attribute, 183
HTCPCP, 23
HTML (Hypertext Markup Language), 1
  convenience of, 213
  distinguished from XML, 148
HTTP (Hypertext Transport Protocol), 1, 13
  interoperability issues, 301
  resources about, 16
  SOAP and, 187–189, 197
  and TCP, 134–135, 140
  uses of, 16
  using, 141–144
HTTP Digest, 254
HTTP modules, 127–129
  drawbacks of, 129
HTTP properties, setting, 125–126
HTTP sessions, 276
  with ASP.NET Web services, 276–277
HttpApplication object, 128
HTTP-GET, 37
HTTP-POST, 37
HttpResponse, 40
HttpSoapContext class, 130
HttpWebRequest class, 34, 142, 144
HttpWebRequest object, 83

I
IAsyncResult object, 80
IBM, xiii
id attribute, 183
IdBag, in tModel, 226
identifierBag, 224
IHttpModule interface, 128
IIS, 39
Implementation versioning, 305
  loose coupling and, 306–307
ImportTypeMapping method, 95
Indentation property, 158
Inheritance, to override proxy class, 126–127
Initialization vector (IV), 254–255
Initiate class, 280, 282
Inquiry operations
  browsing operations, 227
  retrieval operations, 227–228
Inspection routines, 67
Integrity
  defined, 254
  implementation of, 261–265
  in WS-Security, 272
Interface versioning, 305, 307–309
Interoperability, 6, 299
  audience-centered design and, 299–301
  issues in, 301–304
  loose coupling and, 7–8
  problems of, 301–302
  SOAP platforms and, 300–304
  and WDSL, 304
  Web resources on, 300
  WS-I profiles and, 305
Invoke method, 71
IOCompletion ports, 53
IP (Internet Protocol), 133–134
IsEmptyElement, 157
K
Kafka, 7
Kerberos, 254, 266
and WS-Security, 271
keyedReference, 229
KeyInfo element, 264

L
Latency, message size and, 297–298
Literal message, 45
Local name, 18, 151
Logical name
   defined, 236
   functionality of, 236–238
Loose coupling, 7–8
   and implementation versioning, 306–307

M
MailAttachment class, 140
MailMessage object, creating, 140
maxOccurs, 169
MEP (Message Exchange Pattern), 197
Message passing, 9
   defined, 22
Message paths
   forward, 239
   reverse, 239, 241–242
<message> section, of WSDL document,
   29, 205
   use of, 208–209
Message-level sessions
   header of, 278–279
   initiation of, 280
   termination of, 280
<MessageNum> element, 286
Messages
   API to send, 195–196
   asynchronous, 10, 197–199, 235
   binary data in, 247–250
   as component of operations, 9, 29
   defined, 205
   enveloping of, 176–180
   flow of, 285, 287
   intermediaries and, 178
   literal, 45
   numbering of, 284–286
   paths of, 239–243
   with references, 48–49
   requirements for sending, 201–202
   routing of, 40–41, 238–247
   size of, 297–298
   SOAP and, 189–197
   and Web services, 235–251
   WSDL and, 205–209
Method calls
   encoded XML and, 181–184
   remote, 24–26, 184–187
Methods
   asynchronous, 53–60, 79–81, 197–199
   distinguished from operations, 9
   importance of, 26
Microsoft.Web.Services.SoapEnvelope, 190
MIME (Multipurpose Internet Mail
   Extension), 247
   multipart, 247–248
minOccurs, 169
Mixed content, 152
   alternatives to, 152
   disadvantages of, 152–153
Modularity, 8
   leveraging of, 9
Monologues, 289
   uses of, 290–291
mustUnderstand attribute, 57–58, 179–180,
   198

N
Name
   element, 18
   FQN, 151–152
   local, 18, 151
   logical, 236–238
name
   in businessService, 225
   in tModel, 226
Namespace property, 98, 99
Namespaces, 17–18
   advanced handling of, 304
   choosing, 278–279
   defined, 18
   programming using, 154–163
   resources about, 21
   in serialized XML, 97–99
Namespaces (cont.)
in XML, 150
using, 151
and versioning, 307–308
.NET Framework, 7, 33
and WSDL, 213–216
XML Serialization in, 87–114
SOAP APIs in, 190
.NET Framework SDK
components of, 65
disco.exe, 66–67
wsdl.exe, 68–71
.NET Remoting, 300
Network latency, message size and, 297–298
NetworkStream object, 135
NodeType, 157
Notification transmission type, 210
Numbering, of messages, 284–286

O
OASIS group, 30
Object references, 183
One-way clients, building, 78–79
One-way services, 49–50
example of, 50–51
One-way transmission type, 209
OOP (object-oriented programming), 26
Operations
defined, 29
distinguished from methods, 9
in WSDL, 205
operator, in tModel, 226

P
Packaging formats, 66
Parsing
stream-based, 94
XML, 148, 155
Partially transmitted arrays, 183
Password element, 270
Path property, of SoapContext, 243
Performance
and design, 295–296
measuring, 296
importance of, 299
writing code for, 296–297
PIs (processing instructions), 153
PocketSOAP, 7, 300
Policy, security, 266–267
Policy information, in WSDL document, 216–217
POP3 (Post Office Protocol), 138
Port 80, uses of, 16
Ports, within WSDL, 212
PortType element, 304
<portType> section, of WSDL document, 29, 205
example of, 210
use of, 209–210
POST verb, 16, 142
Prefix matching, 246
Private key encryption, 254
described, 254–255
sample of, 256–257
Public key encryption, 254
described, 257
and digital signatures, 261–262
sample of, 258

Q
Qualified name (QName), 18

R
reason element, 242
referencedNamespace attribute, 230
References, in messages, 48–49
Referrals, 237
Reliability
components of, 275
session technology and, 284
Remington Rand, xiii
Remote method calls, 24–26, 184–187
with SOAP, 181–184
<RequestAck> element, 286
Request-response operation, 9–10
defined, 16
in HTTP, 16
Request-response transmission type, 209–210
RequestSoapContext property, 130
ResponseSoapContext property, 130
Retrieval operations, 227–228
retryAfter element, 242
RFC 2324, 23
RFC 2459, 23
Rijndael algorithm, 255
RMI (Remote Method Invocation), 3
Rollover, 13
Routing, 22–23, 40–41, 237–239
controlling of, 51–52
defined, 23
dynamic configuration of, 244–247
WS-Referral and, 245–247
WS-Routing and, 239–243
Rpc/Encoded SOAP, 26
interoperability issues, 302–303
RPC-encoded clients, building, 77–78
RPC-encoded services, building, 47–49
RPCs (remote procedure calls), 175
RSACryptoServiceProvider class, 257
Ruby, Sam, xv

S
Schema
defined, 18
example of, 19
importance of, 26
programming with, 169–173
using, 163–169
using different types in WSDL document, 206–207
Schema tags, 18
Security
protocols of, 265–272
technologies and standards of, 253–265
Security token, 265–266
signed, 266
types of, 268–269
unsigned, 266
using with SOAP, 268
in WS-Security, 269–272
Semiconductor industry, xiii–xiv
SendHashed, 270
<sequence> element, 168
Serialization, 89, 94
rules of, 182–184
Serialize method, 89, 94

Server error code, 181
Service element, of WSDL, 212
<Service> section, of WSDL document, 206
<Service> tag, 29
ServiceDescriptionFormatter, 121, 122
serviceKey, in businessService, 225
Session
defined, 276
HTTP, 276
initiation of, 280
message-level, 278–284
termination of, 280
Session header, 278–279, 281
acknowledgment request in, 286
example of, 287–289
with message numbers, 285
schema for, 282–284
Session object, 34, 276
Signature
digital, 262–264
XML, 264–265
Signature element, 264
SignatureMethod, 264
SignatureValue element, 264
SignData method, 263
Signed security token, 266
SignedInfo element, 264
SOAP (Simple Object Access Protocol), xiv, 5–6, 13
for ADA, 7
basics of, 21–23
basis of, 175–176
bindings in, 52–53
described, 3
DIME and, 248–250
document passing with, 24
encoded, 25, 303
enveloping with, 176–180
error handling in, 11, 40, 60–62, 180–181
and HTTP, 187–189, 197
and interoperability, 300–304
platforms for, 8, 300
purpose of, 175
remote method calls with, 24–26
routing issues with, 235–236
security and, 268
SMTP (Simple Mail Transport Protocol), 16
and TCP, 139
using, 138–140
SOAP (Simple Object Access Protocol) (cont.)
  sending messages with, 189–197, 238
  and sessions, 279–280
  and TCP/IP, 134–137
  transport independence of, 133–134,
  187–188
  versions of, 7, 176
SOAP BEA WebLogic, 7
SOAP extension
  described, 115–116
  example of, 116–121
SOAP fault, 11
  mechanism of, 60–62
SOAP header, 11
  modified, 56–57, 58–59
  using, 54–60
SOAP routers, dynamic configuration of,
  244–247
SOAP Toolkit (Microsoft), 7, 300
SOAP::LITE, 7, 300
SOAPAction header, 16, 23
  use of, 188–189
SoapBindingUse, 110
SOAPBuilders Yahoo! Group, 301
SoapDocumentMethod attribute, 71, 74
SoapDocumentMethodAttribute attribute, 42, 44
  and binding, 53
  OneWay property of, 50
  Use property of, 46
SoapDocumentService attribute, 52
SoapDocumentServiceAttribute attribute, 44
SoapException, 40, 60, 81, 82–83
SoapHeader class, 57
SoapHttpClientProtocol, 71, 75–76
  Invoke method of, 71
SoapReflectionImporter class, 95
SoapRpcMethod attribute, 77, 111
SoapRpcMethodAttribute attribute, 47, 48
  and binding, 53
  OneWay property of, 50
SoapRpcService attribute, 52
SoapRpcServiceAttribute attribute, 47, 48
SoapUnknownHeader class, 58, 59
SOAPx4, 7
Solicit-response transmission type, 210
Sparse arrays, 183
SSL (Secure Socket Layer), 253
Standards
  described, 5–6
  significance of, 5
  versioning of, 8
Stream-based programming, 154
  reading streams, 154–157
  sample of, 158–161
  writing streams, 157–158
Strings, behavior of, 182–183
Structures, wrapper for, 183
Subject, of security token, 266
SymmetricAlgorithm class, 255
System.Net.Sockets.Socket class, 135
System.Net.Sockets.TcpClient class, 135
System.Net.Sockets.TcpListener class, 135
System.Text.Encoding.ASCII object, 136
System.Threading.Thread, 137
System.Web.Mail namespace, 140
  SoapHeader class, 54
  SoapHttpClientProtocol base class, 75
System.Xml, stream-based parsers in, 94
System.Xml.Serialization namespace, 42, 47, 76, 109
System.Xml.XmlElement, 59

T
Tags, 17
  child, 22
targetNamespace attribute, 304
TCP/IP (Transmission Control
  Protocol/Internet Protocol), 16
  described, 133–134
  functions of, 134–135
  and HTTP, 134–135, 140
  and SMTP, 139
  and SOAP, 134–137
TcpClient class, 135
TcpListener class, 136
Terminate class, 280, 282
tModel type, 224, 225–226
  example of, 229
  structure of, 226

tModelKey, 226
Token, security, 265–266, 268–272
Transform, in signature, 265

Transmission
  notification, 210
  one-way, 209
  request-response, 209–210
  solicit-response, 210

Transport information
  exposed HTTP properties, 125–126

Transport protocols
  SMTP, 16, 138–140
  TCP/IP, 16, 133–137, 139, 140
  UDP, 23, 134, 137–138

Tree view, of XML schema, 171–172

Type information, and serialization, 92

Type Model (tModel), 30

Type object, creating, 94

<types> section, of WSDL document, 29, 205
  use of, 206–207, 212

Username security token, 268, 269
  adding, 269–270
  sample, 270

UsernameToken object, 270

V

ValueType attribute, of
  BinarySecurityToken, 270–271

Verbs, 16

VerifyData method, 263

Versioning, 8
  of data types, 305, 307–309
  decisions about, 305
  of implementation, 305, 306–307
  interface, 305, 307–309
  namespaces and, 307–309
  types of, 305–309

VersionMismatch, 181

Virtualization, 245

Visual Studio .NET
  adding Web reference in, 108
  creating clients using, 72–74

W

WASP (Systinet), 7, 300

Watson, Thomas, xiii

Web service architecture
  baseline specifications of, 13
  federation of designs in, 12–13
  vision for, 12

Web Service Behavior, 7

Web services, 1–2
  advanced messaging services, 275–293
  architecture for, 4–8, 12–13
  describing, 201–217
  designing, 295–311
  development of applications, 2–3
  discovery of, 221–233
  document-encoded, 45–47
  document-literal, 40–45
  error handling in, 10–11
  extensions to, 115–131
  interoperability issues, 301–304
  issues in, 2
  message passing in, 9–10
  messaging with, 235–251, 275–293
Web services (cont.)
  modular design of, 8–9
  one-way, 49–51
  policy regarding, 217–220
  popular technologies for, 7
  procedures for creating, 34–38
  routing control in, 51–52
  RPC-encoded, 47–49
  security for, 253–273
  standards for, 21–29
  structure and function of, 38–52
  transport protocols for, 133–145
  XML, xiv
  XML serialization and, 109–113

Web Services Enhancements for Microsoft .NET (WSE), 236
  attachments in, 249
  referrals in, 247
  routing in, 237–238, 243
  security in, 269–272

Web Services Interoperability organization (WS-I), 305

WebClient class, 141–142
  web.config, using, 159

WebControlProtocol method, 126

WebRequest class, 34, 142
  characteristics of, 144
  using, 143

WebRequest object, modifying use of, 126

WebService base class, 125

WebServiceBindingAttribute attribute, 53, 71

Whitespace, 156

Wire format, changing, 309–310

World Wide Web, xiv
  characteristics of, 4–5

Wrapper, 22

WriteAttribute method, 157

WriteAttributeValue method, 157, 158

WriteEndElement method, 157

WriteStartDocument method, 157, 158

WriteStartElement method, 157, 158

WriteString method, 157

WS-Inspection, 229
  anatomy of, 230–231
  characteristics of, 231
  UDDI and, 230

WS-Referral, 235
  functionality of, 245
  issues regarding, 246–247
  and prefix matching, 246
  sample statement in, 245–246

WS-Routing, 22, 235, 275
  building applications, 243–244
  described, 23
  design in, 237
  error handling in, 242
  and logical names, 236–237
  and message paths, 239–243
  sample message in, 240

WS-Security
  described, 267–268
  integrity and encryption in, 272
  and Kerberos, 271
  origin of, 265
  sample message of, 269
  security tokens in, 269–272
  signatures with, 272

WSDL (Web Services Description Language), xiv, 13
  abstraction in, 204, 216, 219
  anatomy of, 205–212
  binding in, 52–53
  described, 27, 219
  describing services with, 26–30
  documents in, 29–30
  extensibility of, 202–204, 216–217
  goals of, 202
  importance of, 6
  interoperability issues, 304
  reading of, 213–216
  sample document, 27–29
  structure of, 204–205
  tool support in, 219–220
  transmission types in, 209–210
  and UDDI, 228–229
  Web service policy and, 217–218
  writing of, 212–213
  and XML schemas, 218

WSDL First! movement, 218–219

wsdl.exe, 65
  creation of classes in, 108
  using, 68–71, 213

WSE (Web Services Enhancements for Microsoft .NET), 129–130

W3C (World Wide Web Consortium), 5
x.509 certificates, 266
  using, 271–272
X509Certificate object, 271
X509SecurityToken object, 271, 272
XML (eXtensible Markup Language), xiv, 1, 13
  characteristics of, 147–149
  described, 17
  encoded, 95–97, 181–184
  encryption of, 258–261
  distinguished from HTML, 148
  interoperability issues, 301
  namespaces in, 17, 150–151, 154–163
  parsers for, 148
  resources about, 21
  rules of, 17
  schemas in, 163–173
  specifications for, 149
  untyped, 104–106
  validity of, 170
  writing and reading, 94–97
XML document
  characteristics of, 149–150
  defined, 148
  sample, 148
XML encryption
  need for special techniques of, 258–259
  sample of, 259–260, 261
  scope of, 260
XML schema documents, 19–20
  data types in, 20
XML schemas, 18
  creating classes from, 106–108
  data types with, 166–168
  example of, 164–166
  manipulating documents in, 171–173
  purpose of, 164
  schemas and, 20
  and WSDL, 218
  to specify XML shape, 168–169
  tree view of, 171–172
XML Serialization, 33–34, 41, 154
  arrays with, 101–104
  customization of, 97–106
  described, 87–94
  of encoded XML, 95–97
  namespaces in, 97–99, 173
  properties and fields in, 99–101
  scope of, 89–94
  of untyped XML, 104–106
  and Web services, 109–113
XML serializer, 39–40
XML signature, 264–265
  sample, 264
XML Web services
  defined, xiv
  standards for, 21–22
XmlAnyAttribute attribute, 112
XmlAnyElement attribute, 112
XmlArray attribute, 102–103
XmlArrayItem attribute, 103–104
XmlAttributeAttribute attribute class, 42
XmlDocument class, 154
  DOM-based programming with, 161–163
XmlElement attribute, 104
XmlElementAttribute attribute class, 42
XmlNode[], 113
xmlns attribute, 151
XMLSerializer, 88–89, 109–113
  methods of, 94
XmlTextReader class, 154, 156
  properties and methods on, 157
  using, 160, 161
XmlTextWriter class, 95, 154, 157–158
  writing changes with, 160–161
XmlTypeMapping object, 95
XmlValidatingReader class, 170
XmlWriter, 95
XSD (XML Schema), 19, 20
  components of, 21
xsd.exe, 106, 108
Xsi:type attribute, 302
