Index

Page numbers followed by f and t indicate figures and tables, respectively.

A
Access control
administration of, with metadata, 151
identity management for, 55–56
policies for, 56
provisioning services for, 55–56
search results and, 144
single sign-on for, 55–56
standards for, 56–57
techniques for, 168
Active references navigation pattern, 11
Active Server Pages (ASP), 30, 49
Ad hoc collaboration tools. See Informal collaboration
Ad hoc query tools, for data warehouse reporting, 126
Adapters, in messaging architecture, 54
Adaptive content services, in application server, 37–38
Adoption
best practices for, 63–71
in design process, 178
grass-roots, 74–78
poor, root causes of, 71–74
Amazon.com
personalization used by, 103–104
rapid transaction execution of, 107
transparency used by, 102
Analytic services
characteristics of, 128–129
need for, 120
portal-based, 128, 129–132
structured data in, 134
Anchor applications
design of, users in, 70
mandated use of, 73
in portal adoption, 69–70
Applets, for content rendering, 31
Application components, 44
Application integration. See Enterprise application integration
Application layer, in EAI system architecture, 59
Application metadata, 148–149, 179
Application server
bypassing, 34
multiple, 33–34
scalability of, 167
workflow management with, 36, 36f
Application server layer, 33–40
data integration with, 34–36, 35f
deep integration in, 166
role of, 33–34
Architecture. See also specific architectures
decisions about, 177
for EAI systems, 51–54
layered, 59–61
ASP (Active Server Pages), 30, 49
Assertions, for access control, 57
Assets, physical vs. digital, categorizing, 14
Asynchronous messaging, vs. synchronous, 54
Audit trail database, 54
Auditing, in identity management, 56
Authentication, 60, 176. See also Access control
Automatic clustering, 15

B
Backup, in design process, 179
BrainEKP (TheBrain Technologies Corporation), 18–19, 19f
Brand, customer trust in, 102
Brokered search system. See Federated search system
Browsing, taxonomies for, 13–14, 155–156
Business component layer, in EAI system architecture, 59
Business drivers, for portals, 171–175
Business, information technology in, 81–82
Business intelligence, 119–121
Business logic, in multichannel integration, 110
Business processes. See also Process-oriented portals
in federated knowledge management architecture, 154
implementation of, 175

C
Call centers, in multichannel integration, 107–108
Capital expenditures, analysis of, 83–88
CARE Canada, knowledge management in, 74–78, 75f, 76f
Cascading Style Sheets (CSS), for content rendering, 30
Categorization, with application server, 38–40
CCI (Common Client Interface), in J2EE Connector Architecture, 47, 48f
Center Partners, visualization used by, 17–20
Centralized search system, 140, 140f, 145
CGI (Common Gateway Interface), vs. Java servlets, 45–46
Change, resistance to, and portal adoption, 73–74
Clustering, automatic, for taxonomy development, 15
Collaboration in application server layer, 37
focus on, 172
formal, 66, 174
implementation of, 175
in implementation process, 180
indexing content of, 78
informal, 67, 174
for project management, 74
requirements for, 173–175
server for, in .NET, 49
support for, in EIPs, 66–68
tacit knowledge stored in, 136
Collaborative filtering, 38
Commerce Server (Microsoft), 49
Common Client Interface (CCI), in J2EE Connector Architecture, 47, 48f
Common Gateway Interface (CGI), vs. Java servlets, 45–46
Common Language Runtime (CLR), 49
Communities of practice, in customer portal, 114
Components, 44–46
Connection pooling, resource adapter for, 47
Connectors, 47–48, 48f
Consumer portals. See Customer portals
Containers, 44
Content in collaboration, indexing, 78
existing documentation as, 78
integrity of, and portal adoption, 72–73
navigation organization by, 5
in page-level structure, 5f, 6
rendering, in presentation layer, 26–33
unstructured, in .NET, 49
Content index, 78, 137
Content management with application server, 37
with metadata, 151
in .NET, 49
Oracle database for, 105
for self-service, 113
Content Management Server (Microsoft), 49
Content metadata, 146–148
Content repository. See also Data warehouse integration of, 176
metadata about, 159
portal as, 74–78, 75f, 76f
Controlled vocabularies
in labeling, 12
in metadata, 148, 151
Conversion factor
for sales estimates, 90–91
in staff time estimates, 90
Core services, in portal structure, 4
Cost, initial, in ROI calculation, 93t, 94
Cost, recurring
in net present value, 84
in ROI, 85, 93t, 94
Cost, total, estimating, 91–92
Crawling, 38, 39f, 141–142, 142f
CSS (Cascading Style Sheets), for content rendering, 30
Cube model, for data storage, 124–126, 125f
Customer portals, 28f, 58–61
Customer relationship management (CRM) systems, as data source, 34
Customer retention, with e-commerce portals, 112, 113–116
Customer trust, in e-commerce portals, 102–103
Customization, in application server, 38
Cyc knowledge base, 20–21
Dashboards, for data warehouse reporting, 127
Data cube model for, 124–126, 125f
in data warehouse, changes to, 122
from multiple sources, integration of, 34–36, 35f
in relational database, 124
structured, 134–135
unstructured, 135–136
Data exchange services, modeling of, 176
Data services layer. See Enterprise information services layer
Data Transformation Services (DTS) (Microsoft), in EAI solution, 109–110
Data validation, in presentation layer, 30
Data warehouse
characteristics of, 122
environment of, 122–128
integrated reporting with, 121, 121f
vs. OLTP systems, 122
structured data in, 134
Data warehouse repository, 124
Database
in adaptive content services, 38
in multichannel integration solution, 110–111
for password storage, 56
relational (See Relational database)
structured data in, 134
Database interface, 46
Database server, scalability of, 167
Decision making
about architecture, 177
distributed, 119
in EIP adoption, 65–66
Deep integration, vs. shallow, 166–167
Design
adapting, after implementation, 180–181
considerations in, 175–180
of ecommerce portals, 106–107
structure in, 3–13
in total cost estimates, 92
trends and technologies in, 20–22
users in, 58–61, 116, 164–166
Design patterns, 10–12, 165
Desktop applications, using multiple, 26–27
Digital assets, vs. physical assets, categorizing, 14
Digital signatures, for access control, 57
Dimensions. See Facets
Directory development, in governance models, 65
Discount rate, 83, 94t
Discussion groups, 67, 75, 76f
Documentation, existing, as core content, 78
Document-centric collaboration about, 66
as knowledge repository, 75, 75f
for project management, 74
DTS (Microsoft Data Transformation Services), in EAI solution, 109–110
Dublin Core standard, 146–147
Duplicated information, in multiple channels, 109
EAI. See Enterprise application integration
Ease of use. See also Usability of e-commerce portals, 103–107
emphasis on, 164–166
eBay, transparency used by, 102
E-commerce applications
server, 49
E-commerce portals
customer retention with, 112,
113–116
customer trust in, 102–103
design of, best practices for,
106–107, 116
ease of use of, 103–107
multichannel integration for,
107–111
navigation in, 104
self-service support in,
112–113
EIP. See Enterprise information
portals
EJB (Enterprise JavaBeans), 46
E-mail, 47
anchor applications for, 73
privacy and, 177
Empire Blue Cross Blue Shield,
enterprise application
integration used by, 57–61
Encryption, for access control, 57
Enterprise application integration
(EAI)
business reason for, 50
case study on, 57–61
deep vs. shallow, 166–167
in .NET, 49
Enterprise application integration
systems, 50–55
architectures for, 51–54,
59–61
characteristics of, 54–55
functions of, 51
layered architecture for,
59–61
loosely coupled vs. tightly
coupled, 54
for multichannel integration,
108–111
simplicity of, 111
Enterprise architecture, in
design process, 179–180
Enterprise directories, in portal
security, 168
Enterprise information portals
(EIPs), 29f
adapting, for user needs, 68
adoption of
best practices for, 63–71
grass-roots, 74–78
poor, root causes of, 71–74
anchor applications in, 69–70
for knowledge management,
case study on, 74–78
marketing of, 69
services in, uniqueness of, 74
sponsorship of, adoption
and, 73
usability of, poor adoption
and, 71–72
user needs and, 68, 78
Enterprise information services
layer, 41, 166
Enterprise JavaBeans (EJB), 46
Enterprise resource planning
(ERP) systems, as data
source, 34
Enterprise search. See Search
Enterprise structures, 14, 135
Entity enterprise beans, 46
ETL (Extraction, transformation,
and load) systems, in data
warehouse environment, 123–124
Exchange Server (Microsoft), 49
Expense tracking, anchor
applications for, 73
Expertise directories
for collaboration, 67–68
in customer portal, 114
definition of, 152
requirements for, 174–175
tacit knowledge in, 152–153,
157, 159
Explicit personalization, 104
Extraction process, 123, 125
Extraction, transformation, and
load (ETL) systems, in data
warehouse environment, 123–124
F
Facets
defining, 177
organizing by, 8–10, 9f
search by, 104, 165–166
in taxonomies, 16
in user-centric design,
165–166
Failover servers, 91, 179
FAQ (Frequently asked ques-
tions) databases, 113
Federated dynamic architecture,
for EAI, 52
Federated knowledge manage-
ment architecture,
153–159
Federated model, for EIPs,
adoption and, 65
Federated search, 38, 39f
Federated search system,
140–141, 141f, 145
Federated static architecture,
for EAI, 52
Financial impact analysis,
81–82, 95–96
Focus+context, 16
Foreign key, 125
Formal collaboration, 66, 174
Framework layer, in EAI system
architecture, 59
Frequently asked questions
(FAQ) databases, 113
Function, in design process,
175–176
G
Gateway, in search architecture,
137, 143–144
Global area, in page-level
structure, 5, 5f
Google, 137, 155
Index

Governance, 65–66, 177–178
Grass-roots adoption, of portal, 74–78

H
Halliburton, customer portal of, 113–116, 114f
Hard revenues, 90
Hard savings, 89
Harvesting, 38, 39f
Help, self-service, 112
Hierarchical organization models, 7, 7f
High Throughput Screening (HTS), 130
Host Integration (Microsoft), 49
ht://Dig, indexing by, 137
HTML, 30–31, 45
HTS (High Throughput Screening), 130
HTTP server (IBM), 59
HTTP/HTTPS, 46
Hub-and-spoke model alternatives to, 51–53
for EAI, 51, 52f
for multi-channel integration, 110
Hybrid architecture, for EAI, 53
Hyperlinking
nonhierarchical, 7, 7f
simple, for portal organization, 6, 6f

I
IBM WebSpace Portal, portlet support in, 33
Identifiers, for structured data, 134
Identity management systems, 55–56, 168
IIS (Internet Information Server), in CARE Canada Link system, 76
Implementation
incremental, 61, 180–181
in total cost estimates, 92
Increased revenues. See Revenues, increased
Index. See Content index
Indexing process, in search system, 141–142, 142f
Informal collaboration, 67, 174
Information access, for searches, 72
Information architecture, in design process, 178–179
Information, duplicated, in multiple channels, 109
Information retrieval, visualization for, 17–20
Information technology (IT), in business, 81–82
Information, types of, 134. See also Data
Initial costs, in ROI calculation, 93, 94
Insightful, 113, 131
Institute for Healthcare Improvement, multi-channel integration at, 108–111
Integration. See Enterprise application integration
Integrity, of content, and portal adoption, 72–73
Interest personalization, 103, 143
Interface design, for portals, 27–28
Internal rate of return (IRR), 86–87, 96
Internet Information Server (IIS), in CARE Canada Link system, 76
Internet security, 49
Internet Security and Acceleration Server (Microsoft), 49
Interviews, with users, 68
IRR (internal rate of return), 86–87, 96
iVisit (Eyematics), 76–77

J
J2EE Connector Architecture, 47–48, 48f
Java 2 Enterprise Edition (J2EE) framework, 43–48
Java applets, for content rendering, 31
Java Database Connectivity (JDBC), 46
Java Message Service, 47, 54
Java Naming and Directory Interface (JNDI), 46
Java Server Pages (JSP) components, 45, 45f
Java Transaction API (JTA and JTS), 47
Java Virtual Machine (JVM), for applets, 31
JavaBeans, for content rendering, 30
JavaMail, 47
JavaScript, for content rendering, 30
Johnson Controls, Inc., metadata used by, 149–152

K
Key performance indicators, in dashboards, 127
Keywords, for unstructured data search, 135
Knowledge management, EIP for, 74–78
Knowledge representation, technologies and trends in, 20–22

L
Labeling, 12–13, 65
Landmarks navigation pattern, 11
Languages, programming. See Programming languages
Languages, scripting. See Scripting languages
Layered architecture, for EAI systems, 59–61
Legacy systems, integration of, with single sign-on systems, 56
Lightweight Directory Access Protocol (LDAP) server, for authentication, 60
Livelink (Open Text), 75–76
Load process, 124
Log(s), 12, 150, 156
Logical restructuring, case study on, 17–20
Loosely coupled EAI systems, vs. tightly coupled, 54

M
Main content area, in page-level structure, 5f, 6
Mainframe integration, 49
Medical Subject Headings (MESH), 21
Merck Research Laboratory, portal-based analytics used by, 129–132
Message queue, in messaging architecture, 54
Message server, 49
Message service, 47
Messaging model, for EAI about, 53–54, 53f
middleware in, 59, 60
synchronous vs. asynchronous, 54
Metadata
for applications, 148–149, 179
for content, 146–148
controlled vocabulary for, 148
defining, 177
in enterprise portal, 145–149
entry forms for, 146, 147f
extracting, 148
in facets, 8
in federated knowledge management architecture, 156–157
in governance models, 65
in implementation process, 180
indexing, 143
Oracle database for, 105
for repositories, 159
search results and, 149–152
searching, 106
for unstructured data search, 135–136
Metadata attributes, defining, 146–148
Metadata directory, in messaging architecture, 54
Metrics, for portal effectiveness, 68
Microsoft .NET architecture, 48–49
Microsoft Office, in CARE Canada Link system, 76
Microsoft Solutions Framework (MSF), for portal development and deployment, 115–116
Middle-tier content organization, 18, 18f
Middleware
in design process, 179
for EAI systems, 51
definition of, 51–54
for messaging, 59, 60
Mobil Information Server (Microsoft), 49
MQ Series (IBM), 54, 59–60
MSF (Microsoft Solutions Framework), for portal development and deployment, 115–116
Multichannel integration, for e-commerce portals, 107–111
MusicNet, ease of use of, 105–107
myHalliburton portal, 113–116, 114f

N
NASA JPL (National Aeronautics and Space Administration Jet Propulsion Laboratory), federated knowledge management architecture at, 153–159
Navigation
decision making about, portal adoption and, 65
definition of, 178
in implementation process, 180
intuitive, for e-commerce portals, 104
in page-level structure, 5, 5f
relational, for content visualization, 16
Navigation patterns, 10–12, 65, 165
Navigation sets, 10, 10f, 104
Neighborhood Auto Parts example, ROI calculation for, 92–95, 93f–94f
.NET architecture (Microsoft), 48–49
Net benefit
definition of, 85
estimating, 88
factors in, 96
in ROI calculation, 94f
Net present value (NPV), 84, 87, 96
Network infrastructure, 167–168, 179
News navigation pattern, 11
Nodes in context navigation pattern, 11

O
Office (Microsoft), in CARE Canada Link system, 76
Index

Online analytic processing (OLAP), 124
Online transaction processing (OLTP) systems, 121, 122
Ontologies, definition of, 21
Open Directory Project, taxonomy of, 133, 155
Operating system, 49
Operations (business), 120–121, 164
Oracle database, for content storage and management, 105
Oracle Portal, portlet support in, 33
Organization (enterprise), in design process, 176–178
Organization, portal design patterns for, 10–12
facets in, 8–10, 9
labeling in, 12–13
navigation sets for, 10
page grouping in, 6–8
taxonomies in, 13–16
visualization tools for, 16, 17–20

P
Pages
   grouping, 6–8
   structure for, 4–6, 5
Passwords, 55, 56
Payback period, 84–85, 96
Payment methods, availability of multiple, 107
Peer-to-peer architecture, 52–53
Personalization
   in application server, 38
   in design process, 178
   for e-commerce portals, 103–104, 115, 116
   in implementation process, 180
   search result quality and, 143
   in user-centric design, 165
PHP, for content rendering, 30
Physical assets, vs. digital assets, categorizing, 14
PKI (Public key infrastructure), for access control, 57
Plug-ins, for content rendering, 31
Plumtree Corporate Portal, portlet support in, 33
Point-to-point integration, 50
Policies, for access control, 56
Portal(s). See also Customer portals; E-commerce portals; Enterprise information portals

Soft revenues, 90–91
Systems, in federated knowledge management architecture, 154
Systems layer, in EAI system architecture, 59

Tacit knowledge, 136, 152–159
Tasks, navigation organization by, 5

Taxonomies
browsable, 13–14, 155–156
decision making about, 65
defining, 177
development of, 14–16, 155–156
in governance models, 65
users in, 15, 158
existing, 14
in implementation process, 180
multiple, 104
for portal organization, 13–16
search services integrated with, 40
on Web, 133

Technical questions database, 158

Technologies, in knowledge representation, 20–22

Terms, in labeling, 12–13

ThinkMap (Plumb Design), relational navigation in, 16

Third-party relationships, customer trust and, 102
Threaded discussion. See Discussion groups

Three-panel structure, 4–6, 5f

Three-tier architecture
application server layer of, 33–40
definition of, 25, 26f
topics, 15

Tightly coupled EAI systems, vs. loosely coupled, 54

Time tracking, anchor applications for, 73

TLS (Transport Layer Security) standard, for access control, 56–57

Topic maps, definition of, 21

Total cost, estimating, 91–92

Total savings, identifying, 88–90

Training, in total cost estimates, 92

Transaction personalization, 103

Transaction support, 47

Transcational architecture, for EAI, 52

Transformation and mapping services, in messaging architecture, 54

Transformation process, 123

Transparency, customer trust with, 102

Transport Layer Security (TLS) standard, for access control, 56–57

Transport protocols, 46

TRUSTe, 102

UDDI (Universal Discovery Description and Integration), 49

Unified Modeling Language (UML), for requirements for, 173

Universal Discovery Description and Integration (UDDI), 49

Unstructured data, 49, 135–136, 137

Usability. See also Ease of use in governance models, 65
portal adoption and, 71–72
Usability (cont.)
- of search, configuration and, 72
- of taxonomies, 156
User(s)
- of analytic services, 129, 132
- in anchor application design, 70
- of data warehouses, 122
- in implementation process, 180
- marketing to, 69
- needs of, adapting for, 68
- in portal design, 58–61, 116, 164–166
- in portal development, 73, 78
- in portal organization, 9–10
- in taxonomy development, 15, 158
- tracking focus of, 107
User administration, in application server layer, 40
User authentication, in portal interface, 28
User interface, in search architecture, 137, 139

V
- Verisign, 103
- Verity Information Server, 150
- Verity K2, for searches, 105–106
- Video conferencing, in collaboration support, 76–77
- Visualization tools
  - for data warehouse reporting, 127
  - for portal organization, 16, 17–20
- VizServer (InXight), focus+ context in, 16

W
- Web applications, building, 49
- Web languages, in portlets, 33
- Web server, scalability of, 167
- Web services
  - for application server integration, 166
  - languages and, 33
  - in .NET, 49
- Web Services Description Language (WSDL), 49
- Web Services Security (WS-Security), for access control, 57
- Web-based applications, J2EE framework for, 43–48
- WebSphere server (IBM), 59
- Windows 2000 (Microsoft), 49
- Windows .NET (Microsoft), 49
- WordNet, 21
- Workflow management with application server, 36, 36f
  - for business processes, 64
  - implementation of, 176
- WSDL (Web Services Description Language), 49
- WS-Security (Web Services Security), for access control, 57

X
- XML
  - for content rendering, 30
  - in EAI layered architecture, 60
  - in .NET, 49
  - in Web services, 33
- XML Digital Signatures (XML-DSIG), 57
- XML encryption, 57
- XML Key Management Specification (XMMS), 57
- XSL Transformations, for content rendering, 30

Y
- Yahoo!, taxonomy of, 133, 155
