# Acknowledgments

I am forever grateful to the efforts of all of the contributors to this book. Many of them have been friends and colleagues for a long time, but I met some others for the first time through working on this project. I look forward to many more years of collaboration with them. This book would not have become a reality without the contributors' willingness to share their hard work with me. I am also indebted to Barry Render, Consulting Editor at FT Press, who invited me to work on this project, and to Jeanne Glasser Levine, Executive Editor at FT Press, whose guidance and advice was instrumental throughout the publication process.

# About the Author

**Matthew J. Drake, Ph.D., CFPIM**, is an Associate Professor of Supply Chain Management and the Director of International Business Programs in the Palumbo-Donahue School of Business at Duquesne University. Dr. Drake primarily teaches analytical courses in the Supply Chain Management program. He holds a B.S. in Business Administration from Duquesne University and an M.S. and Ph.D. in Industrial Engineering from the Georgia Institute of Technology. His first book, *Global Supply Chain Management*, was published by Business Expert Press in 2012. Dr. Drake's research has been published in a number of leading journals including *Naval Research Logistics*, the *European Journal of Operational Research*, *Omega*, the *International Journal of Production Economics*, *OR Spectrum*, the *Journal of Business Ethics*, and *Science and Engineering Ethics*. Several of his previous cases and teaching materials have been published in *INFORMS Transactions on Education* and *Spreadsheets in Education*.

Dr. Drake lives in suburban Pittsburgh, Pennsylvania, with his wife, Nicole; his daughter, Noelle; and his dog, Bismarck.

# Contributor List

**Gopesh Anand** is an Associate Professor of Process Management in the College of Business at the University of Illinois at Urbana-Champaign. His research is aimed at understanding continuous improvement of work processes and execution of operations strategy in organizations.

**Ozgun Caliskan-Demirag** is an Assistant Professor of Supply Chain Management in the Sam and Irene Black School of Business at Penn State Erie, The Behrend College. She holds a Ph.D. in Industrial and Systems Engineering from Georgia Tech, and her main research interests are in the areas of supply chain management, operations/marketing interface, inventory management and decentralized resource allocation. Her work has appeared in journals such as *Operations Research*, *Production and Operations Management*, *Naval Research Logistics*, and *European Journal of Operational Research*.

**Brandy S. Cannon** is employed as an accountant in the Business and Finance Office at Berry College, Mount Berry, Georgia, USA. She earned a B.S. in Accounting and the M.B.A. from the Campbell School of Business at Berry College.

**Tsan-Ming (Jason) Choi** is an Associate Professor in Fashion Business at The Hong Kong Polytechnic University. Over the past few years, he has actively participated in a variety of research projects on supply chain management and systems engineering. He has authored/edited 10 research handbooks and published extensively in leading OR/OM journals such as *Annals of Operations Research*, *Automatica*, *Decision Support Systems*, *European Journal of Operational Research*, *IEEE Transactions on Automatic Control*, *Production and Operations Management*, *Service Science*, *Supply Chain Management*, and various other *IEEE Transactions*. He is now an area editor/associate editor/guest editor of journals which include *Annals of Operations Research*; *Decision Sciences*; *Decision Support*

*Systems; European Management Journal; IEEE Transactions on Systems, Man, and Cybernetics Part A: Systems; Information Sciences; Journal of the Operational Research Society; and Production and Operations Management.*

**Marie Fechik-Kirk**, a Fulbright alumnus, earned an M.B.A. with a focus in sustainability at Duquesne University in 2009. Since then she has helped organizations from Bayer MaterialScience to The Hill School in reducing waste, increasing efficiency, and enhancing their reputation through sustainability initiatives.

**David Gavin** is an Associate Professor of Management at Marist College. He received his doctorate in Strategic Management from the University at Albany. His professional experience includes upper executive positions in the publishing, technology, food service, and retail industries. He has authored or co-authored articles appearing in the *Journal of Business and Economics Studies*, *International Journal of Humanities and Social Science*, and *International Journal of Organization Theory and Behavior*.

**Paul M. Griffin** is a Professor in the Harold and Inge Marcus Department of Industrial and Manufacturing Engineering, where he serves as the Peter and Angela Dal Pezzo Department Head Chair. His research and teaching interests are in health and supply chain systems. Dr. Griffin earned a Ph.D. in Industrial Engineering from Texas A&M University.

**Eric Huggins** is an Associate Professor of Management at Fort Lewis College in Durango, Colorado. When he's not busy teaching, working with student, or analyzing data from local companies, he enjoys spending time in the great outdoors of southwestern Colorado, and he can occasionally be found in the tasting room at Ska.

**Aimée A. Kane** holds a Ph.D. in organizational behavior and theory from the Tepper School of Business at Carnegie Mellon University. She is an Assistant Professor of Management at the Palumbo-Donahue School of Business at Duquesne University. Her research,

which focuses on how groups capitalize on the knowledge of their members, has appeared in several top publications, including the *Academy of Management Annals* and *Organization Science*.

**Beate Klingenberg** is an Associate Professor of Management at Marist College, with a focus on Operations Management and Decision Sciences. Her areas of research include sustainability and environmental management in operations, knowledge management in technology transfer settings, as well as operations management issues in real estate. Her publications appear in academic as well as practitioner publications. Her credentials include a master's in Chemistry and Ph.D. in Physical Chemistry (both University of Erlangen-Nürnberg, Germany) as well as an M.B.A. from Marist College. Furthermore, she has extensive industry experience in technology transfer and project management.

**Louis A. Le Blanc** is Professor of Business Administration at the Campbell School of Business, Berry College, Mount Berry, Georgia, USA. He received a Ph.D. from Texas A&M University, followed by postdoctoral study at the University of Minnesota and Indiana University. Dr. Le Blanc teaches courses in strategic use of information technology and operations management.

**Drew Lessard** is a strategy and analytics professional with experience in Global Fortune 500 companies and has a current passion for startups. He holds an M.B.A. concentrating in Sustainability from Duquesne University and a Master of Arts in Economics from Boston University. He hails from Portland, Maine, and currently resides in Pittsburgh, Pennsylvania.

**Ryan Luchs** is an Assistant Professor of Marketing in the Palumbo-Donahue School of Business at Duquesne University. He teaches marketing and supply chain management courses to undergraduates and also teaches the Strategic Marketing course in the Sustainable M.B.A. curriculum. Dr. Luchs received a Ph.D. and an M.B.A. from the University of Pittsburgh and a B.S. in Chemical Engineering from Penn State University.

**Kathryn Marley** is an Assistant Professor of Supply Chain Management in the Palumbo-Donahue School of Business at Duquesne University. Her research interests include lean management and continuous improvement programs, supply chain disruptions, and pedagogical methods.

**Christopher Roethlein** is a Professor in the Management Department at Bryant University where he teaches courses in operations management and supply chain management. He has a Ph.D. in Management Science and Information Systems from the University of Rhode Island; and his research interests include quality and communication within a supply chain, strategic initiatives through alignment of supply chain goals, collaborative relationships, and leadership excellence. He has published in a numerous journals, and he was a co-winner of the 2011 Case Studies Award Competition presented by the Decision Sciences Institute.

**Mercy Shitemi** holds a B.S. in Informatics from Indiana University and is currently completing a master's degree in Information Systems Management at Duquesne University's John F. Donahue Graduate School of Business. Mercy hails from Eldoret, Kenya.

**Robert P. Sroufe** is the Murrin Chair of Global Competitiveness in the John F. Donahue Graduate School of Business and Director of Applied Sustainability within the Beard Institute at Duquesne University. Dr. Sroufe is an award-winning scholar and teacher. These awards include instructional innovation and best environmental papers from the National Decision Sciences Institute. Within the M.B.A. Sustainability program, he develops and delivers courses on sustainable theories and models including life-cycle analysis, business applications of sustainability tools, and processes for new initiatives; and he oversees action-learning consulting projects every semester with corporate sponsors.

**John K. Visich** is a Professor in the Management Department at Bryant University, where he teaches courses in operations management and supply chain management. He has a Ph.D. in Operations Management from the University of Houston, and his research interests are in supply chain management, radio frequency identification, and corporate social responsibility. He has published in a numerous journals, and he was a co-winner of the 2011 Case Studies Award Competition presented by the Decision Sciences Institute.

**Angela M. Wicks** is an Associate Professor in the Management Department at Bryant University, where she teaches courses in operations management and project management. She has a Ph.D. in Operations Management from the University of Houston, and her research interests include hospital performance, patient satisfaction, and health care technology. She has published in numerous journals including the *International Journal of Quality Assurance in Healthcare*, *Hospital Topics*, and the *International Journal of Healthcare Technology and Management*.

**Charles A. Wood** is an Assistant Professor in the Management Information Systems area at the Palumbo Donahue School of Business at Duquesne University in Pittsburgh, Pennsylvania. After spending over a decade in the “real world” as a systems analyst, team leader, manager, systems architect, and finally as the owner of a successful consulting company, Chuck returned to academia to complete an M.B.A. and a Ph.D. He has taught at several institutions, including Notre Dame and at the University of Minnesota.

# Preface

The field of business analytics has been thrust into the global spotlight in recent years. This surge in popularity is largely because of a barrage of books and periodical articles highlighting its potential to help firms create a competitive advantage. Although some techniques contained within the umbrella of business analytics, such as data mining, text mining, and neural networks, truly represent cutting-edge methodologies that mainly appear in advanced graduate courses, the building-block techniques of business analytics, such as statistical analysis, optimization, and decision trees, are mainstays in business-school curricula around the world.

Business analytics can be broadly defined as “the scientific process of transforming data into insight for better decision making.”<sup>1</sup> As a result of this focus on decision making, courses that cover material related to business analytics can benefit greatly from utilizing case studies as a supplement to the core analytical material. Case studies are an effective method for exposing students to the entire decision-making process because they put the student in a simulated active role as a decision maker who must perform the analysis and use the output to recommend a course of action.

Although cases are a mainstay of many graduate business courses, they are used somewhat less frequently in undergraduate courses. One reason for this lack of extensive case adoption in undergraduate courses is the preponderance of long cases published by the major case libraries. Cases appropriate for undergraduates need to be somewhat more focused because the students do not have as much experience as graduate students. Many textbooks include one- or two-page cases at the end of a chapter to illustrate the application of the techniques presented in the chapter. Because they are so short, these cases often amount to little more than a slightly expanded homework problem.

<sup>1</sup> <http://www.informs.org/About-INFORMS/What-is-Analytics>

This collection of cases is designed to supplement core material covering business analysis techniques in courses as varied as statistics, operations management, management science, supply chain modeling, and decision analysis. This book fills the gap in the library of business analytics case materials appropriate for undergraduate students with cases of moderate length. The cases are also appropriate for introductory-level graduate courses, as instructors can focus the analysis and discussion on more of the complex issues raised in the cases.

The cases in the collection are grouped by the primary analytical technique appropriate for each decision environment. Part 1, “Forecasting and Process Analysis,” includes three forecasting cases and one case that focuses on quality control and process improvement. Part 2, “Optimization and Simulation,” contains cases that utilize the classic management science methods of optimization and simulation. The optimization cases address inventory control and logistics network design, and the simulation case addresses the management of process flows. Part 3, “Decision Analysis,” includes cases that require the application of a variety of decision analysis tools from decision trees and factor rating to the Analytic Hierarchy Process (AHP), multi-criteria decision analysis, and group decision making. The decision environments vary from facility location to sustainability management. Part 4, “Advanced Business Analytics,” contains two advanced cases—one that is truly a “big data” case with a large data set and another centered on vehicle routing, a traditionally difficult problem in logistics.

It is my hope that the cases in this collection expose students to the power of business analytics and the utility of these techniques in the decision-making process. Students armed with an effective toolbox of analytical skills and techniques are well positioned to make thoughtful, reasoned decisions informed by data analysis for their

companies and organizations. These analytical skills are transferrable across companies and industries and can enhance students' attractiveness and value to employers throughout their careers.
