This book is dedicated to my grandparents, who got me into photography at a very early age.
This is the part of the book where I get to say thank you to everyone who has helped me over the years. Well, this could be a book on its own. For me, it’s very simple: you can only be successful when you network and have people that help you out. My list is huge, but I want to thank a few people in person via this page:

First of all, of course, my family for always being there and supporting me, even when the ideas I have sometimes are probably a bit too ambitious. :-D Without them, the career I’ve chosen would be impossible. So, Mom, Leo, Annewiek, and Brian, thank you so very much for always being there and inspiring me.

Second of all, Scott and Kalebra Kelby and their whole team. These people are awesome and I consider them to be my family overseas.

Of course, my work would be less interesting without the help of some of the fine models I work with, our crazy creative stylist Nadine, and the awesome makeup artists I’ve worked with over the years.

But also, the fellow instructors I’ve met over the years that have in some way changed my work or inspired me to push much harder to achieve things I never thought possible.

Photographers like Jay Maisel, Moose Peterson, Joe McNally, Glyn Dewis, and many more have changed the way I look at the world around me and the techniques I use, and have inspired me to do things differently or add their techniques to my own and create something that became more interesting.

Gear and software are also important, and the following companies have grown to become close friends over the years and have supported my work to a large extent, so many thanks to the team at Mamiya/Leaf (Ziv/Yair), Elinchrom, ExpoImaging, Fujifilm, DxO (Hector), Tether Tools, and all the other supporting companies like Sony, Alien Skin, Imagenomic, Topaz, Google/Nik, X-Rite, SmallHD, DNA, and many more. Thanks to you, my work has always been able to continue and I’ve been able to experiment with new things.

Let’s be honest, the support of the people that follow my work online and attend the workshops/seminars is very important. You guys rock!

And finally, someone I never had the chance to meet but who has an enormous influence on me and actually got me into teaching the way I do: Dean Collins, who is, in my opinion, still the Dean of Light.
Frank Doorhof was born in Amsterdam, the Netherlands, in 1971 to a family that was always busy with photography and video—not professionally, but always working in their own darkrooms and looking for new ways to improve their own prints.

While growing up, Frank developed a real passion for movies and imaging. After finishing business school, he started a recording studio for bands, which he left a year later to pursue a successful career in IT and Home Theater. Frank was one of the first Dutch ISF (Imaging Science Foundation)-trained calibrators and has, over the years, grown to be the primary expert on calibration for many in the Netherlands.

Photography and videography were always a passion, but due to the busy computer and home theater business, were always considered a hobby. When, in early 2004, Frank discovered model photography, everything changed quickly. Due to his lighting style and people skills, Frank found himself asked to shoot several assignments, including some artists that really boosted the demand for his work. It didn’t take long before Frank was asked to teach workshops, which he declined at first. When he finally started to teach, he was the first European instructor to be asked to join Kelby Training and to teach at the Photoshop World Conference & Expo.

By 2013, Frank had released a total of nine instructional DVDs/videos, which are sold worldwide, and a Dutch book called The Magic of the Small Strobe: From Dark to Light. In 2013, Frank and Annewiek sold their IT business to focus on photography. In 2014, they will finish their new studio, which is located in Emmeloord, in the Netherlands, and is primarily aimed at workshops and fashion photography.

Frank has contributed to many publications over the years, including both magazines and books. He teaches through webinars and at tradeshows like Photoshop World, Photokina, Professional Imaging, Society of Wedding and Portrait Photographers, and Focus on Imaging, among others. He also participates in many alpha and beta programs for photography software and hardware.

Frank teaches workshops in his studio in the Netherlands every week and flies all over the world for workshops on location, always accompanied by his wife Annewiek. Besides his teaching, he is still very active as a photographer for both commercial and personal projects. He has been named a DxO Image Master, an X-Rite Coloratti, and an Adobe Influencer.

Frank updates his blog daily with new images, techniques, reviews, and much more. You can find him at:

Welcome to my book. Over the years, my focus has always been on teaching workshops and seminars, and filming the videos I’ve released. When I joined Kelby Training a few years ago, I got into a conversation with Scott and, before I knew it, he talked me into writing a book, and he was right (well, of course he was).

For me, photography is a passion, not just a profession. In fact, I don’t think I ever do a day’s work (although doing bookkeeping comes very close, but hey, that’s only one day a week). I always tell my students that, when it comes to work, you have a few options. The biggest ones are:

1. **You can work your whole life for a boss.**
   You can work long hours (or short), earn a lot of money (or a little), and have some free time for hobbies and your family. A lot of people I know choose this option. They literally “go to work,” and they often don’t really like it. But, it’s what most people do.

2. **You can start your own business.**
   I grew up in a family where owning your own business was normal. Both my grandparents and parents owned companies, so when I was still at school, I already knew I wanted to go into business for myself. Not for the money, but because I don’t want to “go to work” every day. I want to look back later in life and realize that I had a fantastic ride, and if there is enough money to live my life and take care of my family, that’s enough, I think. We don’t need three cars and two houses.

   Of course, being in business has its risks, but in today’s economy I don’t think there’s a profession where you can be really certain you’ll be doing the
same thing in a few years. At least when you’re in business for yourself, you can control the situation slightly and find new opportunities.

“But, Frank, I thought this was a photography book.” Well, yes, it is. Bear with me. In photography nowadays, there’s a disturbing trend. It’s like the joke I always tell (which is more true than you can imagine): When someone buys a violin, he is someone who owns a violin; however, when someone buys a camera, he is a photographer. I think that says it all.

In the past, photography was a profession that needed the proper training and an understanding of light, chemicals, gear, and more. Nowadays, when you buy a camera (thanks to the big “Polaroid” on the back—what I call my LCD), you can immediately see the results and the learning curve is shorter. That on its own is not a bad thing, but it becomes a bad thing when people start losing their focus on quality, and that is what’s happening in today’s market.

“Photographers” are aiming more toward “spray and pray” techniques, in which they shoot as many images as they can and just hope the right one is there. Also, customers are losing their focus on quality, and that’s not hard to understand. In a market where prices are going down and the quantity is growing explosively, people get used to mediocre photography. It’s simply what everyone sees most of the day and are getting when they hire a “photographer.” I’ve seen websites for wedding shooters that charge $300–$700 for a wedding, including retouching, and when I see their work it’s...well, not really okay, but also not really bad.

So, when someone wants to hire a photographer for their wedding, they have three options: (1) hire Uncle Harold, who owns a nice DSLR and can make
candid shots (maybe even some good ones) for free; (2) hire a “photographer,” pay $300–$700, and at least get shots that are probably better than Uncle Harold’s; (3) hire a real photographer, pay $2,000–$7,000+, and get professional shots. Some of you will say, “Okay, that’s easy, hire the pro.” But there’s more to it than that. Some people simply don’t have the money for a pro and are happy with the “photographers.” And (this might come as a shock), some of the “photographers” are really—and I mean really—good. The problem with them, however, is that they are, in fact, digging their own graves.

The problem is that you can’t charge $300 one day and then raise your price to $2,000 the next because you realize you can’t make a living on $300. So, when they decide to give up their day job and shoot as a pro, they will probably go bankrupt very quickly. So, how do we change this? Well, we can’t. Welcome to the new world. But, we can make it easier for ourselves, and that’s why I wrote this book.

Look at it this way: Photography is there in many forms. One is just taking candids, and I don’t think you’ll make any money there because there are way too many Uncle Harolds. Then there is the “copycat/CC” behavior. You see a lot of forum questions about this, like “How do I get the look of this image?” I’m always a bit puzzled by these questions. For most of the images, it’s clear how to achieve them—mostly it’s in the light, styling, and posing, and the Photoshop work is often in color changes. The people asking this often show images they want to look like “that image” that are differently lit or are shot with strobes while the original is clearly shot with natural light, or vice versa.

Now, say they master that look. They are one step higher in the food chain, and can create a look that’s popular, although it’s not their look. I call these people the engineers. There are plenty of engineers. They earn some money, but if someone else is cheaper and delivering the same look, they will be replaced.

Next, we come to a group I call the artists. These photographers have their own “voice,” They know how to shape images into something that is their own, but they also understand light and Photoshop (or have a good retoucher), so they can create something a customer wants to see. Artists will be hired for their “voice/look” and not for the cheap or copycat look. If you belong in this group, you will be hired for you,
not for something else. The customer wants you, so that means you can charge a different price. Don’t overcharge, because there probably will be more yous that also look okay, but if you’re smart, I think this is really where the options are.

How do you get into that group? If I could give you a one-step solution, I’d probably be rich, but there is no universal formula for success. Over the years that I’ve been teaching, however, I’ve found a lot of similar things that either hold back a photographer or make him successful.

You’ll find a lot of information about these in this book. For me, photography and running a business all boil down to the small details. Of course, you need to master the basics first, but after that, it’s all in the details, and those forgotten details are in a lot of photography I see during portfolio reviews. Take, for example, a beautifully lit model in a great location—a breathtaking image technique-wise. However, I still can’t give the photographer a thumbs-up. If they’d taken a little bit more time for posing or styling, it would’ve all clicked. Or if they’d changed the composition just a bit, the image would’ve rocked.

There are always some people who’ve been shooting for many years, but still produce images that even Uncle Harold would delete. But, most of the portfolio reviews I do are from talented photographers that are just missing one or two pieces of the puzzle. Some will try to “fake it” in Photoshop, but if you need Photoshop to turn a mediocre image into a good one, you are starting the wrong way. If you understand what photography is, you know you can create the look mostly in-camera. If you watch the details, like composition, styling, and posing, you’ll quickly find that photography is about so much more than knowing your camera.

This book is about just that. As I always say, why fake it when you can create it? I hope that with all the tips in this book, you’ll discover the details you need in your own shots and build a good base from there. And don’t think that you have to want to be a pro to read this book. All the tips are universal for Uncle Harold, the engineers, and the artists. Mastering the details will make you a better photographer no matter what level you’re at, and you’ll get more fun out of shooting.

Have fun reading the book, and let your photography grow.
CHAPTER FOUR

CLOTHING & STYLING
(THE MOST IMPORTANT THINGS)

Photography is an art form. To create art we need inspiration, vision, etc. When you start out as a photographer, you will know this problem. You find a model who is willing to pose for you, but she shows up with the standard jeans and tank top that she wears in everyday life. In the end, you can make some images but it’s not what you really want, is it? It’s not about lighting; it’s not about gear; it’s about the image—you’re telling a story. When you take a photograph of a model wearing jeans and a tank top, your lighting has to be spectacular because there’s simply nothing else going on. When you start talking about styling and hair and makeup, you can shoot even in the bright sunlight and it will look amazing.
Often, when we see images in magazines that we really like, we wonder, “Why do I really like this image?” One of the most common mistakes (and trust me, I started out the same way) is to concentrate on the lighting. I call this “being blind to what’s really going on.”

Now, don’t get me wrong, the light in an image is very important. We, as photographers, paint with light, so the light should be great. However, in our quest to recreate a certain look, we often forget the most important parts of the image: location, styling, and makeup. Without these vital elements, an image is nothing more than, well, an image. The light can be great, but if nothing else is going on, it’s only that.

Prepare for the Shoot
A photo shoot is something that takes preparation. Make sure you know what you’re gonna do the day of the shoot. A shoot that starts with, “We’ll see what happens” often ends in disaster. Yes, I know that some people always work that way and always get great results, but trust me, it will be much better if you prepare.

“Frank, do you always prepare for a shoot?” Ummm, well, you know. Okay, I’ll be honest. No, I don’t always prepare for a shoot, however, in some ways, I do. I know my gear, I know my lighting, and I often already have some ideas in my mind that I want to work on, so when I say to a model, “Let’s go to [a location] and we’ll see what happens,” it’s different than just going there and not knowing anything.

In most situations, I recognize the options and know how to light it to get the result I want. But, I’ve been doing this for some time, and this has to grow over time. It doesn’t happen in one or two
years. So, although I sometimes go to a shoot with an attitude of, “We’ll see what happens,” I still go prepared. For example, we always have some sort of idea, like doing something with a motorcycle, or doing a session with balloons in a field. Often, I have sketches of ideas, even if they are not completely worked out. However, for about 95% of my sessions, I have prepared before the actual shoot, and these are often the ones that really rock. How can you do this?

Before the shoot
Let’s say you have your team together and you want to start preparing. The first thing you have to do is find a theme. In the old days, people would use physical mood boards and have meetings before the shoot. Today, that’s not necessary anymore. Instead, one of the things I love to use now is Pinterest.

Mood boards
The best way to prepare for a shoot is with a mood board. You can do it the old-fashioned way by gluing images, or colors, or materials to a piece of cardboard. But, you can, of course, also do it digitally. If you own an iPhone, iPad, or similar device, there are even apps that will help you design and store a mood board. So far, though, there aren’t any killer mood board apps for tablets that are cross-platform. My friend, UK-based photographer Glyn Dewis, uses an app for his iPad called Moodboard, but you can run into problems with there not being the same app for both Apple and Android users. On the other hand, Pinterest works for everybody (iPhone and Android), it’s online, and it’s free.

Just remember that a mood board is not about copying the images on the board; it should be used to “feel” the session. I’ve seen several mood boards over the years that, for example, also contained fabrics, just to get a feel for the material or structure. But, most boards will just contain images, colors, text, etc. You should see the mood board as your personal/team collection of ideas from which your shoot will grow.
The mood board should definitely be a team effort. I strongly believe that the whole team should know about it, see it, and participate in it (if necessary). Always remember that photography is a team sport and that if you work as an “ego,” it will almost always go wrong.

During the building of the mood board, you will get to know your team—you will be in contact with them, and share ideas and visions. This often breaks down the first barriers and will help when you finally meet up. It’s a given that if you know each other, working together will be easier. So, make sure you use social media, like Google+, Twitter, and Facebook, to their full extent and share, share, share with your team.

**Pinterest**

Now, if you want to do the mood board really right, create a Pinterest account (www.pinterest.com). It’s free and, for me, it’s the perfect way to share and create a mood board with my team. You just create a board and start pinning ideas to it. You can even add a Secret board, and then invite only your team to share information and ideas for the upcoming shoot on it.

I have several Secret boards that I share with the people who arrange the models for my shoots, and these boards change over time. Sometimes I’m more into long dresses, and sometimes I want something more edgy. The nice thing about Pinterest is that you can use it on both your mobile devices and your home/office computer without worrying about compatibility, because it is web-based. Also, you can pin almost anything you find on the web, as long as it has an image. For me, Pinterest has really changed the way we do mood boards. I love it!
Now let’s take a look at what we need for a successful photo shoot. We already talked in more detail about picking models, setting up the photo shoot, and paying for everything in Chapter 1. So, here’s a quick rundown of the people you need on your team:

The First Thing We Need Is the Model
Getting the right model for the job does not mean picking the first pretty face you see on the street. This works for some images, but a good model is someone who is flexible with their poses and, most of all, has character. Somehow, I don’t like the “pretty” models. I always want something offbeat in my models, something that sets them apart from the crowd. When you go through my portfolio, you will see a lot of pretty girls (and guys), but I selected them because of their other qualities: the way they act in front of the camera, the way they dress when they come in at the casting/test shoots, and so on. Often I can see in the blink of an eye if a model is what I am looking for.

“Now,” I hear you ask, “how about some examples?” Well, I thought about this and I want to spare you the boring headshots, so I thought we’d do it a bit more in sync with the book. For example, one of things I always ask a model to do during a test shoot is to jump. We use a lot of motion in our shoots, and a model that moves freely in front of the camera is a huge plus for me. So, here is a shot of a jump from a test session we did with Loes, a model we now work with a lot.

Expression is also very important, so it’s not uncommon for me to ask a model to scream in front of the camera. Often, it’s a way to break the ice, and for me, it’s a great way to see what kind
One small tip: When asking a model to scream, make sure you tell them to scream without making a sound. Your neighbors will love you for it. Actually, a pretty funny story happened a few years ago during the Professional Imaging show in the Netherlands. I used a model whose native language wasn’t Dutch and it was a bit loud during the start of the demo. I told her to scream and said quietly, “Without making a sound.” Somehow she did not hear that last part, and I’m so glad I used a strap for my camera, because otherwise it would have been on the ground. It was a great way to get a lot of attendees to the booth, by the way, because after the scream, the whole building was dead silent and we went from approximately 40 viewers at the demo to more than 100, so it can be interesting.
of expression the new model can/will bring to the set. A model that is restrained will often also be less “free” in front of the camera. So this is actually a pretty good way to test a model. It won’t give you the best images, but it does show you how free a model feels in front of the camera.

The Makeup Artist (MUA)

Now that we have our model, it’s up to the next vital part, the makeup artist. Put a model in front of the lights without makeup and…well, she will look very, very bad. Add some makeup, and there we go.

The first problem a lot of starting photographers experience is the “shine” on the face. Whatever they try, they don’t seem to be able to figure this out. In reality, it’s simple: when you put someone in front of strobes without any makeup, the skin reflects the light. So, we need to put something on the skin—in most cases, a powder that will remove the shine. The correct powder is chosen based upon the model’s skin. So, if you can’t afford a makeup artist, at least make sure you have some of this powder in your studio, with a brush to apply it to your model’s face. It makes a huge difference.

But, this is not where the job of a good MUA stops. They are often the creative force behind your shoot. They will come up with ideas that you probably would never think of, or enhance the ideas you have. The moment you start working with an MUA, you’ll see an immediate jump in your image quality.

Now, some makeup artists also do a little bit of hairstyling, however when you have the chance, try to get a hairstylist, too.
The Hairstylist

Now it’s going to get crazy creative. Hairstylists are the Mad Hatters on the set. They are the people that make the creative juices go *BOOM!* They can transform an okay model into something that will make your jaw drop.

Combine the hairstylist with a good makeup artist and you can get stuff like the images you see here. And when we do something in white, we have to do something in black, as well.

Hair and makeup are often underestimated, just as styling is. In the hectic pace of a photo shoot, people seem to forget that, in the end, it all boils down to the final image. Often, I see images that are very nice but don’t have that “Wow!” factor that they do when people just give a little bit more attention to stray hairs, a little bit better makeup, etc.

A successful photo shoot is a collaboration between many people, ranging from the photographer and model to the makeup artist, stylist, and hairstylist. Now, I know that a lot of people cannot pay for a team like this (and we also don’t have teams like this most of the
Both the white and black skin were done with makeup. Afterward, I had to touch it up in Photoshop because it’s almost impossible to get 100% coverage the way I wanted it. The shots were done with standard strobes, so the makeup and lip colors were actually all standard, readily available makeup material, although we did choose colors that were, let’s say, “eye-catching.”

time). But, even without a full team, it’s very easy to, for example, just wet the hair a little bit to make sure it’s not “fluffy,” or just add a little bit of gel or hairspray to the hair to make sure it stays in place. It’s all those little things that you can do yourself, or that a team normally does, that will make your image go from okay to “Wow!” And now for the final part of our team:
The Stylist

If the hairstylist is the Mad Hatter, the stylist is the über Mad Hatter—the one that puts the whole team into overdrive. These people are the creative engine behind a shoot. But, to find a good one is very hard and often expensive.

Stylists are able to throw together stuff that make you think, “That will never, ever go together,” and when you see the end result, you will say, “Oh my! What just happened?” Now don’t get me wrong, styling a shoot is not just throwing some stuff together and hoping it will work out. It’s much, much more. It’s about knowing what goes together, knowing how to pose your model, and knowing how to light the scene.

Often, getting a stylist isn’t easy. I always tell people that there are a million models out there, about a thousand makeup artists, and maybe one good stylist. Now, I do exaggerate a little bit, but it’s actually pretty close to the truth—there really are not that many stylists out there, and the reasons are very simple:

First of all, being a good stylist means being almost freakishly creative, but it also means being able/willing to spend a lot of money on accessories, clothing, fabrics, etc.
The stylist we work with in our studio literally has moved to a bigger house to be able to store all the materials she uses. She also creates 90% of the dresses herself and takes them apart again after one shoot. She does not want to use something more than once (maybe twice). This means a lot of dedication and money that is spent. It also means that a lot of stylists won’t work for free (Time For Print [TFP]—more on this back in Chapter 1), however I strongly feel that they are worth every cent and can really lift your work to the next level.

Let’s look at a few images to see how easy it can be to add some flair to them without breaking the bank, and imagine these images with a model in just jeans and a tank top.

This shot was actually not as easy as it looks. The cup and saucer were bought by the model, and it was actually sold as a hairclip. However, whoever designed it must have had a bad day, because the cup and saucer were way too heavy to stay in the hair. In the end, we taped (yes, I’m serious) the cup and saucer to the hair of the model to keep it steady. One good tip: If you use tape, make sure you are nowhere nearby when the makeup artist removes the prop from the hair.
All we needed for this image was a strong face, some nice basic makeup, and a leaf from a plant that was in our studio at the time. It’s all very simple, but because of the proper placement, and the composition, and position of the hair, it all works.

This next dress (above right) looks expensive, right? Well, actually, it’s just Christmas wrapping paper and some tape to hold it together. It was put together by Nadine (our model and stylist) in about two hours. Total cost: $0 (well, okay, just the cost of some tape).

Below right, we used some fabric the model bought at the market, some chicken wire, and some crazy makeup. Add a little bit of smoke and some backlight and you’re done (more on the smoke back in Chapter 2, and lots more on lighting later in the book). Overall, the costs were less than $20.

In most model photography books, the writer only touches on one topic needed for a photo shoot, like “How to Operate Your Strobes” or “The 1,001 Poses Book.” That doesn’t work for me. In the end, we all know how a strobe works, what a reflector does, etc. We don’t need an extended
instructional manual to get the feeling for a photo shoot.

A successful photo shoot is much more. It's the balance between the subject, the light, the make-up, the hair, and the styling. To be totally honest, although the technique you put into the shot is very important and can still make or break the shoot, you can be the best lighting wizard in the world, but if you don’t take care of the other points, you’ll never ever create something that will make people go crazy.

In this book, I've tried to give you the most complete rundown of a successful photo shoot that I can and you'll find many tips on how to create such a shoot. I also show you lots of examples. As you work your way through the book, you'll see a variety of styling examples, from the simple to the complex. So, don’t panic after reading this chapter. Don’t think, “I can never pay for all this, so I’ll stop reading.”

You don’t have to start out with the complete team from Day 1. However, if you know a little bit about styling due to the tips in this book, you’ll see your images improve very quickly. Just changing your model from jeans and a tank top into something more interesting often transforms your images into something that draws more attention to your work. The nice thing about getting more attention for your work, especially online, is it means that more people will want to work with you.

Just like you, there are many makeup artists, stylists, and hairstylists out there that are just starting out, building their portfolio, and they’re looking for ways to do this. If you stand out with your images, the chance that they will approach you (or react positively when you approach them) will grow, and if you start out with this team, you’ll quickly see the entire team grow and the work improve a lot. From then on, well, who knows what will happen.
