

Index

NUMBERS

32-bit processors, 64-bit processor compatibility, 196
64-bit processors, 195-196

A

access files (/etc/mail directory), 370
Access tab (Server Settings dialog), Share Name option, 309
access times attribute (/etc/xinetd.conf), 387
account match extension (IPTables), 481
accounts (user), deleting, 218
ACL (Access Control Lists), 185
 effective rights masks, 187
 enabling, 186
 Kerberos, 282-283
 modifying, 186-187
 preserving, 189
 removing, 189
 setting default ACL, 188
 viewing, 186
acl statements, named.conf files (BIND), 341
action_mail_acct option (auditd), 508
Activation Key Administrator role (RHN), 81
Add dialog (NFS Server Configuration graphical tool), 296

adding

- disk space to LVM, 172-173
- group administrators, 213
- groups, 212-213
- LVM, 173
- passwords, group management, 214
- users, 206-208, 215
- users to RHN accounts, 85

addrtype match extension (IPTables), 481**administrators**

- group administrators, adding, 213
- roles, RHN, 81

admin_space_left option (auditd), 508**admin_space_left_action option (auditd), 509****ah match extension (IPTables), 481****All option (Options directive), 333****Allow connections from port 1024 and higher option (NFS Server Configuration graphical tool, General Options tab), 297****Allow insecure file locking option (NFS Server Configuration graphical tool, General Options tab), 297****allow_anon_ssl directive (anonymous FTP), 390****AltSysRq key combinations, kernel system requests, 432-433****AMANDA (Advanced Maryland Automatic Network Disk Archiver), 223**

- client configuration, 227-229
- configuring, 224
- dumpype parameters, 228-229
- executing backups, 230-231
- hard drives as virtual tapes, 225-226
- holding disks, 227
- restoring from backups, 232
- server utilities, 231
- tape drive parameters, 225

amrecover, 232**amrestore, 232****analyzing****hardware**

- BIOS queries, 160
 - DMI queries, 160-162
 - HAL, 165
 - listing kernel modules, 157, 163-164
 - listing partitions, 156
 - listing PCI devices, 152-154
 - listing storage devices, 156
 - listing USB devices, 154-156
 - SMBIOS queries, 160-162
 - vendor-specific data queries, 163
- OProfile samples, 453
- opannotate command, 456
 - opreport command, 454-456

anonymous FTP, 389-391**anonymous_enable directive (anonymous FTP), 390****anon_max_rate directive (anonymous FTP), 391****anon_mkdir_write_enable directive (anonymous FTP), 390****anon_other_write_enable directive (anonymous FTP), 390****anon_root directive (anonymous FTP), 391****anon_umask directive (anonymous FTP), 391****anon_upload_enable directive (anonymous FTP), 390****anon_world_readable_only directive (anonymous FTP), 390****Apache HTTP server**

- /etc/httpd/conf/httpd.conf configuration file directives, 329-330
- connections, allowing, 328
- HTTP requests, allowing, 328
- SELinux, 327
- web servers, creating, 329
 - directory directives, 334
 - global configuration directives, 330-331
 - loading directives, 335

- logging connections, 336
- main server directives, 332-334
- starting/stopping servers, 337
- virtual host directives, 334-335
- applets, adding to desktop panel, 543**
- applications**
 - monitoring
 - DejaGnu, 460
 - Dogtail, 460
 - Frysk, 460
 - GNU Debugger, 460
 - lcov, 460
 - OProfile, 449-457
 - Valgrind, 458-459
 - starting/stopping at shell prompt, 109
- Applications menu, 99**
- arrays, creating in RAID, 181**
- assigning**
 - static NFS ports, 300
 - users to RHN, 81-82
- audit records, searching in Linux Auditing System, 518-521**
- audit reports, generating for Linux Auditing System, 516-518**
- audit rules, 510-513**
- audit watches, 514-515**
- auditctl, 515**
- auditd (audit daemon)**
 - action_mail_acct option, 508
 - admin_space_left option, 508
 - admin_space_left_action option, 509
 - configuring, 505-509
 - default parameters, 506
 - disk_error_action option, 509
 - disk_full_action option, 509
 - dispatcher option, 507
 - disp_qos option, 507
 - EXTRAOPTIONS parameter, 509
 - flush option, 507
 - freq option, 507
 - log_file option, 506
 - log_format option, 507
 - max_log_file option, 508
 - max_log_file_action option, 508
 - num_logs option, 507
 - priority_boost option, 507
 - space_left option, 508
 - space_left_action option, 508
 - starting/stopping, 515-516
- auditing. *See* Linux Auditing System**
- audits, tracing, 521**
- aureport command, generating audit reports, 516-518**
- ausearch command, searching audit records, 518-521**
- authconfig command (kickstart), 33**
- Authenticate System Accounts by Network Services option (Authentication Configuration tool), 289**
- authentication**
 - SMB, 285-286
 - Winbind, 286
- Authentication Configuration tool, 287-288**
 - Authenticate System Accounts by Network Services option, 289
 - Cache User Information option, 289
 - command-line version, 289-292
 - Local Authorization is Sufficient for Local Users option, 289
 - Use MD5 Passwords option, 289
 - Use Shadow Passwords option, 289
- Authentication mode option (Samba Server Configuration graphical tool, Security tab), 307**
- Authentication Server option (Samba Server Configuration graphical tool, Security tab), 308**
- authoritative name servers, 340**

autofs

- connecting NFS shares, 302-304
- NIS, 264-266

automating tasks

- Awk scripts, 249
- Bash scripts, 239
 - conditionals, 244-245
 - echo command, 241-242
 - executing commands, 240-242
 - loops, 245-246
 - running, 243-244
 - variables, 242
- Perl scripts, 247
- Python scripts, 247
- Sed scripts, 248-249

autopart command (kickstart), 36

autostep command (kickstart), 32

autrace command, tracing audits, 521

Awk scripts, 249

B**backups**

- AMANDA, 223
 - client configuration, 227-229
 - configuring, 224
 - dumpype parameters, 228-229
 - executing backups, 230-231
 - hard drives as virtual tapes, 225-226
 - holding disks, 227
 - restoring from backups, 232
 - server utilities, 231
 - tape drive parameters, 225
- determining what to backup, 222-223
- full, 223
- incremental, 223

rsync utility, 234

tar utility, 232-233

BALANCE target extension (IPTables), 494

banned_email_file directive (anonymous FTP), 391

Bash (Bourne Again Shell) scripts, 239

- conditionals, 244-245
- echo command, 241-242
- executing commands, 240-242
- loops, 245-246
- running, 243-244
- variables, 242

bash shell, shortcuts, 106-107

basic partition installation (Linux installation), 24

Basic tab

- NFS Server Configuration graphical tool, 297
- Server Settings dialog, 306, 309

BIND (Berkeley Internet Name Domain), 340

- control channels, configuring, 344
- DNS servers, starting/stopping, 349-351
- graphical configuration, 349
 - importing defined hosts, 350
 - saving changes, 351
- named.conf files, 341
 - acl statements, 341
 - adding comments to, 341
 - category statements, 353
 - channel statements, 351
 - controls statements, 341, 344
 - include statements, 341
 - key statements, 342, 347
 - keys statements, 345
 - listen-on statements, 342
 - logging statements, 342, 351-354
 - lwres statements, 342
 - masters statements, 343

- options statements, 343, 346-347
- search statements, 342
- server statements, 343, 347
- transfer-source statements, 343
- trusted-keys statements, 344
- view statements, 344
- views statements, 345
- zone statements, 344-346
- rndc, configuring, 346-347
- views, configuring, 345
- zones, configuring, 345-346
- bind option (etc/xinetd.conf), 382**
- BIOS (Basic Input/Output System), querying, 160-162**
- biosdecode command, 160-162**
- boot discs**
 - kickstart file accessibility, 48
 - Linux installation, 12
- boot loaders, 76**
 - GRUB, Linux installation, 19
 - repairing (system recovery), 237
- bootloader command (kickstart), 33**

C

- Cache User Information option (Authentication Configuration tool), 289**
- Cachegrind tool (Valgrind), 459**
- Callgrind tool (Valgrind), 459**
- cat /proc/mdstat command**
 - adding partitions to RAID, 181
 - creating RAID arrays, 180
 - monitoring RAID devices, 182
- category statements, customizing named.conf file (BIND) logging statements, 353**

- CD-ROM**
 - kickstart Linux installations, 49
 - Linux installations, 10
- CDs**
 - boot discs, 12, 48
 - Linux installation CDs, 11-12, 15
- chage command, 210-211**
- chains (IPTables), 477**
- channel statements, customizing named.conf file (BIND) logging statements, 351**
- channel subscriptions (RHN), 82**
- Channels view (RHN), 80**
- chcon command, 473**
- childlevel match extension (IPTables), 481**
- chkconfig command, runlevel configuration, 121**
- chmod utility, modifying file permissions, 117**
- chown_uploads directive (anonymous FTP), 390**
- chown_username directive (anonymous FTP), 391**
- CLASSIFY target extension (IPTables), 494**
- clearpart command (kickstart), 36**
- clustering, 185**
- CLUSTERIP target extension (IPTables), 494**
- cmdline command (kickstart), 32**
- command-line. *See* shell prompt**
- commands**
 - Emacs editor commands, 115
 - finding in directories, 108
 - man pages, 111
 - Vi editor commands, 113
- comment match extension (IPTables), 482**
- comments, adding to named.conf files (BIND), 341**
- compressing kernel dumps via kdump command, 438**
- condition match extension (IPTables), 482**
- conditionals, Bash scripts, 244-245**

Configuration Administrator role (RHN), 81**configuring**

- DHCP servers, PXE Linux installations, 55
- IPTables, 477
- OProfile
 - event monitoring, 450-452
 - graphical interface configurations, 457
- tftp servers, PXE Linux installations, 52-54
- troubleshooting, 551-552

connbytes match extension (IPTables), 482**connectivity (networks), DHCP, 319**

- common parameters, 323-324
- local-port parameters, 320
- logging connections, 325
- network connections, allowing, 320
- server configuration, 320-324
- starting/stopping server, 324-325

connlimit match extension (IPTables), 482**connmark match extension (IPTables), 482****CONNMARK target extension (IPTables), 495****connrate match extension (IPTables), 482****conntrack match extension (IPTables), 483****control channels (BIND), configuring, 344****controls statements, configuring named.conf file (BIND) control channels, 341****copying files in directories, 105****cps attribute (/etc/xinetd.conf), 386****crash analysis, kernel dumps, 440-442****cron, scheduling tasks, 249-252****crond (cron daemon), 251****crontabs package, 250****CUPS (Common UNIX Printing System), 398****Current Enforcing Mode option (SELinux), 464****current working directories, 104****customizing**

- auditctl, 515
- BIND logging statements, 351-354

desktop

- keyboard shortcuts, 101
- workspaces, 100

Kerberos configuration files, 279**LDAP logging, 277****Logwatch**

- configurations, 419-421
- scripts, 421

SELinux

- contexts, 470-474
- policies, 466-467
- software, Linux installation, 19

CustomLog directive (logging directives), 336**D****daemons, 119****auditd**

- action_mail_acct option, 508
- admin_space_left option, 508
- admin_space_left_action option, 509
- configuring, 505-509
- default parameters, 506
- disk_error_action option, 509
- disk_full_action option, 509
- dispatcher option, 507
- disp_qos option, 507
- EXTRAOPTIONS parameter, 509
- flush option, 507
- freq option, 507
- log_file option, 506
- log_format option, 507
- max_log_file option, 508
- max_log_file_action option, 508
- num_logs option, 507
- priority_boost option, 507

- space_left option, 508
- space_left_action option, 508
- starting/stopping, 515-516
- crond, 251
- named (BIND), 349
- slapd, LDAP configuration, 267
- yppasswdd, NIS server configuration, 261
- date/time**
 - displaying, 100
 - NTP
 - allowing connections, 398
 - client connections, 395-396
 - server configuration, 397
- ddccp match extension (IPTables), 483**
- ddcprobe command, detecting hardware, 158-159**
- debugging applications**
 - DejaGnu, 460
 - Dogtail, 460
 - Frysk, 460
 - GNU Debugger, 460
 - lcov, 460
 - OProfile, 449-457
 - Valgrind, 458-459
- dedicated partitions, kernel dump file locations, 437**
- DejaGnu application monitoring/debugging tool, 460**
- deleting**
 - files/folders, 101
 - groups, 213-214
 - Kerberos principals, 282
 - LDAP entries, LDAP server configuration, 274
 - user accounts, 218
 - users, 208, 211
- deny_email_enable directive (anonymous FTP), 390**
- Description option (Samba Server Configuration graphical tool, Basic tab), 309**
- desktop**
 - Applications menu, 99
 - customizing
 - keyboard shortcuts, 101
 - workspaces, 100
 - navigating, 99-100
 - Places menu, 100
 - System menu, 100
 - time/date, displaying, 100
 - Trash icon, 101
 - windows
 - bringing forward, 100
 - minimizing, 100
 - switching between, 100
 - workspaces
 - customizing, 100
 - monitoring applications, 100
- desktop file browsers**
 - FTP server client connections, 393-394
 - Samba share connections, 314-315
- desktop panel, adding applets to, 543**
- device command (kickstart), 41**
- df command, determining partition disk usage space, 405**
- DHCP (Dynamic Host Configuration Protocol), 319**
 - allowing network connections, 320
 - common parameters, 323-324
 - local-port parameters, 320
 - logging connections, 325
 - NFS server, kickstart Linux installations, 51
 - server configuration, 320-324
 - starting/stopping server, 324-325
- DHCP server**
 - NFS, kickstart file accessibility, 49
 - configuring, PXE Linux installations, 55

directives

- /etc/httpd/conf/httpd.conf configuration file, 329
- directory directives, 334
- global configuration directives, 330-331
- loading directives, 335
- logging directives, 336
- main server directives, 332-334
- virtual host directives, 334-335
- kickstart, 31

directories

- build directories (RPM), setting up, 136-137
- changing, 104
- creating, 104
- current working directories, 104
- FHS, common directories list, 102
- files
 - copying, 105
 - finding, 105-107
 - moving, 105
 - removing, 105
- partitions, creating for, 107
- PATH, adding to, 108
- relative directories, 104
- removing, 105
- subdirectories, determining usage space, 405
- viewing contents of, 105

Directory option (Samba Server Configuration graphical tool, Basic tab), 309

DirectoryIndex directive (main server directives), 332

Disable subtree checking option (NFS Server Configuration graphical tool, General Options tab), 297

Disabled mode (SELinux), 464

disabled option (etc/xinetd.conf), 381

disabling

- processors with Hyper-Threading Technology, 202
- SELinux policies, 468

disk performance

- iostat command, 407-408
- sar command, 408-409

disk quotas

- database files, creating, 190-191
- displaying, 193
- enabling, 190
- modifying, 192
- setting, 192
- soft/hard limits, 192
- turning on/off, 191

disk space

- LVM, adding to, 172-173
- troubleshooting, 557

disk_error_action option (auditd), 509

disk_full_action option (auditd), 509

dispatcher option (auditd), 507

display driver (nVidia), installing, 526-527

disp_qos option (auditd), 507

DMI (Desktop Management Interface), querying, 160-162

dmiencode command

- command line options, 162
- DMI queries, 160-162
- vendor-specific data queries, 163

dmraid command (kickstart), 40

DN (Distinguished Names), LDAP, 268

DNAT target extension (IPTables), 495

DNS (Domain Name System) servers

- allowing connections, 340
- hostname resolution, 339-340

- rndc utility, 340
 - command-line options, 347-348
 - configuring, 346-347
 - starting/stopping, 349, 351
- DocumentRoot** directive (main server directives), 332
- Dogtail** application monitoring/debugging tool, 460
- domains (VM)**, 533
 - guest domain modifications, 543-544
 - hardware allocation, 544
- domaintable** files (/etc/mail directory), 370
- Dovecot**, 374-377
- downloading software**, YUM, 87
- driverdisk** command (kickstart), 42
- drivers**. **See** kernels, modules
- dscp** match extension (IPTables), 484
- DSCP** target extension (IPTables), 495
- du** command, determining subdirectory disk usage space, 405
- dump** command, preserving ACL, 189
- dumps (kernel)**
 - crash analysis, 440-442
 - dump file location, selecting, 436-438
 - kdump** command
 - activating via graphical application, 439-440
 - compression, 438
 - filtering, 438
 - saving, 433
 - starting/stopping, 439
 - testing, 440
 - memory, reserving for secondary kernels, 435
 - warm reboots via Kexec, 434-435
- dumpstype** parameters (AMANDA), 228-229

E

- echo \$PATH** command, viewing PATH environment variable values, 108
- echo** command, 241-242
- ecn** match extension (IPTables), 484
- ECN** target extension (IPTables), 496
- edquota** command, modifying disk quotas, 192
- effective** rights masks, 187
- ELILO**, 77
- Emacs** editor
 - common commands list, 115
 - text files, editing, 114-115
- email**
 - IMAP, 374-375
 - mail servers
 - allowing email connections, 377-378
 - logging Sendmail connections, 376-377
 - MTA, 368. *See also* Sendmail
 - MUA, 367-369
 - POP, 374-375
 - reading, 369
 - server configuration
 - /etc/aliases configuration file, 371
 - /etc/mail directory, 370-371
 - SSL encryption, 372-373
 - starting/stopping server, 373
 - /var/spool/mail, 372
 - SMTP, 368
 - transferring, 368
- email_password_file** directive (anonymous FTP), 391
- emergency** mode (system recovery), 237
- Empty Trash** command, 101
- enabled** option (etc/xinetd.conf), 381

Encrypt Passwords option (Samba Server Configuration graphical tool, Security tab), 308

encryption

email servers, 372-373

TLS, LDAP, 275

Enforcing mode (SELinux), 464

environment variables, Bash scripts, 242

Errata view (RHN), 80

ErrorDocument directive (main server directives), 332-333

ErrorLog directive (logging directives), 336

esp match extension (IPTables), 484

etc/dovecot.conf configuration file, 374-376

/etc/login/defs file, creating users/groups, 216

/etc/mail directory, 370-371

/etc/modprobe.conf files, 65

/etc/passwd file, user management, 214

etc/rc/d/init.d/network files, 66

/etc/resolv.conf files, 66-67

/etc/shadow file, shadow passwords, 215

/etc/sysconfig/network files, 65-67

/etc/sysconfig/network-scripts/ directory, 66

/etc/xinetd.conf (master xinetd configuration file), 380

access times attribute, 387

bind option, 382

cps attribute, 386

disabled option, 381

enabled option, 381

umask option, 382

v6only option, 382

Ethernet

DHCP, 67

static IP, 68

event monitoring, configuring in OProfile, 450-452

ExecCGI option (Options directive), 333

ExecShield, 547-549

expanding filesystems in logical volumes, 177

Export only if mounted option (NFS Server Configuration graphical tool, General Options tab), 298

extending

logical volumes, 176-177

volume groups, 174

EXTRAOPTIONS parameter (auditd), 509

F

failing partitions, RAID, 182

failure (system). **See backups; recovery**

fdisk -l command, listing partitions, 168

fdisk command, listing storage devices, 156

FHS (Filesystem Hierarchy System), 102

file browser (desktop)

FTP server client connections, 393-394

Samba share connections, 314-315

file protection. **See SELinux (Security-Enhanced Linux)**

file sharing

- NFS, 293
 - allowing connections, 295
 - mount points, 293
 - SELinux, 294
 - server configuration, 295-299
 - share connections, 301-304
 - static port assignments, 300

Samba

- allowing connections, 305
- logging connections, 313
- mounting shares, 317-318
- SELinux, 304
- server configuration, 306-313
- share connections, 314-318

file transfers

- FTP servers
 - allowing connections, 391
 - anonymous FTP, 389-391
 - configuring, 388
 - FTP client connections, 392-394
 - logging connections, 394
 - SELinux, 387-388
 - starting/stopping, 389
- scp command, 359
- sftp command, 360

files

- deleting, 101
- directories
 - copying in, 105
 - finding in, 105-107
 - moving in, 105
 - removing from, 105
- FHS, 102
- makefiles, creating for RPM packages, 143

- permissions, 116
 - changing, 117-119
 - setting graphically, 118

restoring, 101**RPM files**

- naming conventions, 126
- package files, querying, 134-135
- software files, 133-135

spec files, creating for RPM packages, 137-142**text files**

- content navigation, 109
- editing, 112-115
- reading, 109

filesystem repair (system recovery), 237**filesystems**

- ACL, 185
 - effective rights masks, 187
 - enabling, 186
 - modifying, 186-187
 - preserving, 189
 - removing, 189
 - setting default ACL, 188
 - viewing, 186
- directories, finding
