

## Classroom Resources for Cisco® Networking Academy® Courses

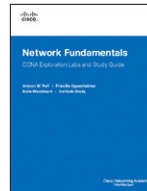

### Cisco Networking Academy Series Formats

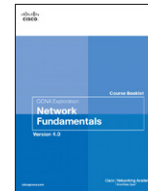

**Learning Guides** combine the textbook with the labs in one resource per course. They provide tutorial content that reinforces and supplements the corresponding online curriculum, and contain the hands-on labs for the course.

**Companion Guides** are portable references designed to reinforce online course material, helping students focus on important concepts and organize their study time for quizzes and exams. Authors provided added content and learning tools to enhance comprehension and retention.

**Labs and Study Guides** provide students with a convenient, complete collection of course lab exercises as well as supplemental lab exercises from the authors that provide additional hands-on practice as well as more advanced challenges. The Study Guide section provides related author-created learning exercises.

**Course Booklets** offer a new way for students to easily read, highlight, and review on the go, wherever the Internet is not available. The text is extracted directly from the online course, with headings that have exact page correlations to the online course. An icon system directs the reader to the online course to take full advantage of the images, labs, Packet Tracer activities, and dynamic Flash-based activities.
