CompTIA Security+ Detailed Mapping
SY0-401 vs SY0-501

Executive Summary

- An estimated 25% change exists between SY0-401 and SY0-501.
- The range of topics is similar but several topics are explored in more detail; there is more content to cover. For example, some SY0-401 objectives are broken down into multiple SY0-501 objectives to expand coverage of the same topic.
- Interestingly, SY0-501 objectives cover lower Bloom’s taxonomy layers than SY0-401.
  - SYO-401 objectives focused on analyzing (Layer 4) – intermediate skills and entry-level
  - SYO-501 focuses on applying (Layer 3) – entry-level skills
- SYO-501 objectives cover mostly lower-level learning objectives through knowledge, comprehension, and application. The SYO-401 exam covered the more intermediate analysis level. Analysis is now found in intermediate-level certifications, such as CompTIA Cybersecurity Analyst (CSA+).
- The updated exam focuses more on attacks, risk management and hands-on skills using technologies and tools. The domains were re-ordered and re-named to reflect better ID organization and emphasis of industry cybersecurity trends, as determined in the Security+ SY0-501 Job Task Analysis (JTA).
- In general, there is more content to cover, but the exam questions focus on applying technology (Layer 3) instead of previously more-difficult analysis (Layer 4) skills.

| The CompTIA Security+ certification is a vendor-neutral, internationally recognized credential used by organizations and security professionals around the globe to validate foundation level security skills and knowledge. Candidates are encouraged to use this document to help prepare for CompTIA Security+ SY0-401, which measures necessary skills for IT security professionals. Successful candidates will have the knowledge required to:  
  • Identify risk  
  • Participate in risk mitigation activities  
  • Provide infrastructure, application, information and operational security  
  • Apply security controls to maintain confidentiality, integrity and availability  
  • Identify appropriate technologies and products  
  • Troubleshoot security events and incidents  
  • Operate with an awareness of applicable policies, laws and regulations | The CompTIA Security+ certification is a vendor-neutral credential. The CompTIA Security+ exam is an internationally recognized validation of foundation-level security skills and knowledge, and is used by organizations and security professionals around the globe. The CompTIA Security+ exam will certify the successful candidate has the knowledge and skills required to install and configure systems to secure applications, networks, and devices; perform threat analysis and respond with appropriate mitigation techniques; participate in risk mitigation activities; and operate with an awareness of applicable policies, laws, and regulations. The successful candidate will perform these tasks to support the principles of confidentiality, integrity, and availability. |

Summary

CompTIA expects a smooth transition from SY0-401 to SY0-501. The purpose of the exam has not changed. Security+ continues to provide the universal baseline for entry-level cybersecurity skills needed throughout the globe. SY0-501 provides the latest technology and industry job skills to mirror the changing world of cybersecurity skills. It is anticipated that Security+ will continue to raise the standard for cybersecurity professionals worldwide.

### Objective Comparison

<table>
<thead>
<tr>
<th>SY0-401</th>
<th>SY0-501</th>
</tr>
</thead>
</table>
| 1.1 Implement security configuration parameters on network devices and other technologies.  
  - Firewalls  
  - Routers  
  - Switches  
  - Load balancers  
  - Proxies  
  - Web security gateways  
  - VPN concentrators  
  - NIDS and NIPS  
  - Behavior-based  
  - Signature-based  
  - Anomaly-based  
  - Heuristic  
  - Protocol analyzers  
  - Spam filter  
  - UTM security appliances  
  - URL filter  
  - Content inspection  
  - Malware inspection  
  - Web application firewall vs. network firewall  
  - Application aware devices  
  - Firewalls  
  - IPS  
  - IDS  
  - Proxies | 2.1 Install and configure network components, both hardware- and software-based, to support organizational security.  
  - Firewall  
  - ACL  
  - Application-based vs. network-based  
  - Stateful vs. stateless  
  - Implicit deny  
  - VPN concentrator  
  - Remote access vs. site-to-site  
  - IPSec  
  - Tunnel mode  
  - Dissolvable vs. permanent  
  - Host health checks  
  - Agent vs. agentless  
  - Mail gateway  
  - Spam filter  
  - DLP  
  - Encryption  
  - Bridge  
  - SSL/TLS accelerators  
  - SSL decryptors  
  - Media gateway  
  - Hardware security module |

1.2 Given a scenario, use secure network administration principles.
2.1 Install and configure network components, both hardware- and software-based, to support organizational security.

- Firewall
  - ACL
  - Application-based vs. network-based
  - Stateful vs. stateless
  - Implicit deny
- VPN concentrator
  - Remote access vs. site-to-site
  - IPSec
  - Tunnel mode

  - Host health checks
  - Agent vs. agentless
- Mail gateway
  - Spam filter
  - DLP
  - Encryption
- Bridge
- SSL/TLS accelerators
- SSL decryptors
- Media gateway
- Hardware security module

1.3 Explain network design elements and components.

- DMZ
- Subnetting
- VLAN
- NAT
- Remote access
- Telephony
- NAC
- Virtualization
- Cloud computing
  - PaaS
  - SaaS

3.2 Given a scenario, implement secure network architecture concepts.

- Zones/topologies
  - DMZ
  - Extranet
  - Intranet
  - Wireless
  - Guest
  - Honeynets
  - NAT
  - Ad hoc
- Segregation/segmentation/isolation
  - Physical
- IaaS  
- Private  
- Public  
- Hybrid  
- Community  
  - Layered security/defense in depth

1.4 Given a scenario, implement common protocols and services.  
- Protocols  
  - IPSec  
  - SNMP  
  - SSH  
  - DNS  
  - TLS  
  - SSL  
  - TCP/IP  
  - FTPS  
  - HTTPS  
  - SCP  
  - ICMP  
  - IPv4

2.6 Given a scenario, implement secure protocols.  
- Protocols  
  - DNSSEC  
  - SSH  
  - S/MIME  
  - SRTP  
  - LDAPS  
  - FTPS  
  - SFTP  
  - SNMPv3  
  - SSL/TLS  
  - HTTPS  
  - Secure POP/IMAP  
  - Use cases
| - IPv6 | o Voice and video |
| - iSCSI | o Time synchronization |
| - Fibre Channel | o Email and web |
| - FCoE | o File transfer |
| - FTP | o Directory services |
| - SFTP | o Remote access |
| - TFTP | o Domain name resolution |
| - TELNET | o Routing and switching |
| - HTTP | o Network address allocation |
| - NetBIOS | o Subscription services |

| Ports | OSI relevance |
| 21 | o Voice and video |
| 22 | o Time synchronization |
| 25 | o Email and web |
| 53 | o File transfer |
| 80 | o Directory services |
| 110 | o Remote access |
| 139 | o Domain name resolution |
| 143 | o Routing and switching |
| 443 | o Network address allocation |
| 3389 | o Subscription services |

1.5 Given a scenario, troubleshoot security issues related to wireless networking.
- WPA
- WPA2
- WEP
- EAP
- PEAP
- LEAP
- MAC filter
- Disable SSID broadcast
- TKIP
- CCMP

6.3 Given a scenario, install and configure wireless security settings.
- Cryptographic protocols
  - WPA
  - WPA2
  - CCMP
  - TKIP
- Authentication protocols
  - EAP
  - PEAP
  - EAP-FAST
  - EAP-TLS
  - EAP-TTLS

| Printers/MFDs                  | HVAC                      |
| Camera systems                 | SoC                       |
| Special purpose                | RTOS                      |
| Medical devices                | Printers/MFDs             |
| Vehicles                       | Camera systems            |
| Aircraft/UAV                   | Special purpose           |

3.9 Explain the importance of physical security controls.

| Lighting                        | Signs                     |
| Fencing/gate/cage               | Security guards           |
| Alarms                          | Safe                      |
| Secure cabinets/enclosures      | Secured cabinets/enclosures|
| Protected distribution/Protected cabling | Airgap          |
| Mantrap                         | Faraday cage              |
| - Compensating  | • Lock types  |
| - Technical     | • Biometrics  |
| - Administrative| • Barricades/bollards |
|                 | • Tokens/cards |
|                 | • Environmental controls  |
|                 |   o HVAC  |
|                 |   o Hot and cold aisles  |
|                 |   o Fire suppression  |
|                 | • Cable locks  |
|                 | • Screen filters  |
|                 | • Cameras  |
|                 | • Motion detection  |
|                 | • Logs  |
|                 | • Infrared detection  |
|                 | • Key management  |

5.7 Compare and contrast various types of controls.
- Deterrent
- Preventive
- Detective
- Corrective
- Compensating
- Technical
- Administrative
- Physical

2.8 Summarize risk management best practices.
- Business continuity concepts
  - Business impact analysis
  - Identification of critical systems and components
  - Removing single points of failure
- Business continuity planning and testing
- Risk assessment

3.8 Explain how resiliency and automation strategies reduce risk.
- Automation/scripting
  - Automated courses of action
  - Continuous monitoring
  - Configuration validation
- Templates
- Master image
- Non-persistence
  - Snapshots
- Continuity of operations
- Disaster recovery
- IT contingency planning
- Succession planning
- High availability
- Redundancy
- Tabletop exercises
  - Fault tolerance
- Hardware
- RAID
- Clustering
- Load balancing
- Servers
  - Disaster recovery concepts

- Cold site
- Hot site
- Warm site

- Revert to known state
- Rollback to known configuration
- Live boot media
  - Elasticity
  - Scalability
  - Distributive allocation
  - Redundancy
  - Fault tolerance
  - High availability
  - RAID

5.6 Explain disaster recovery and continuity of operation concepts.
- Recovery sites
  - Hot site
  - Warm site
  - Cold site
  - Order of restoration
  - Backup concepts
    - Differential
    - Incremental
    - Snapshots
    - Full
    - Geographic considerations
      - Off-site backups
      - Distance
      - Location selection
      - Legal implications
      - Data sovereignty
    - Continuity of operation planning
      - Exercises/tabletop
      - After-action reports
      - Failover
      - Alternate processing sites
      - Alternate business practices
<table>

3.2 Summarize various types of attacks.
- Man-in-the-middle
- DDoS
- DoS
- Replay
- Smurf attack
- Spoofing
- Spam
- Phishing
- Spim
- Vishing
- Spear phishing
- Xmas attack
- Pharming
- Privilege escalation
- Malicious insider threat
- DNS poisoning and ARP poisoning
- Transitive access
- Client-side attacks
- Password attacks
  - Brute force
  - Dictionary attacks
  - Hybrid
  - Birthday attacks
  - Rainbow tables
- Typo squatting/URL hijacking

1.2 Compare and contrast types of attacks.
- Application/service attacks
  - DoS
  - DDoS
  - Man-in-the-middle
  - Buffer overflow
  - Injection
  - Cross-site scripting
  - Cross-site request forgery
  - Privilege escalation
  - ARP poisoning
  - Amplification
  - DNS poisoning
  - Domain hijacking
  - Man-in-the-browser
  - Zero day
  - Replay
  - Pass the hash
  - Hijacking and related attacks
- Clickjacking
- Session hijacking
- URL hijacking
- Typo squatting
  - Driver manipulation
- Shimming
- Refactoring

3.3 Summarize social engineering attacks and the associated effectiveness with each attack.

- Shoulder surfing
- Dumpster diving
- Tailgating
- Impersonation
- Hoaxes
- Whaling
- Vishing

- Principles (reasons for effectiveness)
  - Authority
  - Intimidation
  - Consensus/social proof
  - Scarcity
  - Urgency
  - Familiarity/liking
  - Trust

1.2 Compare and contrast types of attacks.

- Social engineering
  - Phishing
  - Spear phishing
  - Whaling
  - Vishing
  - Tailgating
  - Impersonation
  - Dumpster diving
  - Shoulder surfing
  - Hoax
  - Watering hole attack

- Principles (reasons for effectiveness)
  - Authority
  - Intimidation
  - Consensus
  - Scarcity
  - Familiarity
  - Trust
  - Urgency
### 3.4 Explain types of wireless attacks.
- Rogue access points
- Jamming/interference
- Evil twin
- War driving
- Bluejacking
- Bluesnarfing
- War chalking
- IV attack
- Packet sniffing
- Near field communication
- Replay attacks
- WEP/WPA attacks
- WPS attacks

### 3.5 Explain types of application attacks.
- Cross-site scripting
- SQL injection
- LDAP injection
- XML injection
- Directory traversal/command injection
- Buffer overflow
- Integer overflow
- Zero-day
- Cookies and attachments
- Locally Shared Objects (LSOs)
- Flash cookies
- Malicious add-ons
- Session hijacking
- Header manipulation
- Arbitrary code execution/
### 3.6 Analyze a scenario and select the appropriate type of mitigation and deterrent techniques.

- Monitoring system logs
  - Event logs
  - Audit logs
  - Security logs
  - Access logs
- Hardening
  - Disabling unnecessary services
  - Protecting management interfaces and applications
  - Password protection
  - Disabling unnecessary accounts
- Network security
  - MAC limiting and filtering
  - 802.1x
  - Disabling unused interfaces and unused application service ports
  - Rogue machine detection
- Security posture
  - Initial baseline configuration
  - Continuous security monitoring
  - Remediation
- Reporting
  - Alarms
  - Alerts
  - Trends
- Detection controls vs. prevention controls
  - IDS vs. IPS
  - Camera vs. guard

### 2.3 Given a scenario, troubleshoot common security issues.

- Unencrypted credentials/clear text
- Logs and events anomalies
- Permission issues
- Access violations
- Certificate issues
- Data exfiltration
- Misconfigured devices
  - Firewall
  - Content filter
  - Access points
- Weak security configurations
- Personnel issues
  - Policy violation
  - Insider threat
  - Social engineering
  - Social media
  - Personal email
- Unauthorized software
- Baseline deviation
- License compliance violation (availability/integrity)
- Asset management
- Authentication issues

### 1.5 Explain vulnerability scanning concepts.
- Passively test security controls
- Identify vulnerability
- Identify lack of security controls
- Identify common misconfigurations
- Intrusive vs. non-intrusive
- Credentialed vs. non-credentialed
- False positive

### 5.3 Explain risk management processes and concepts.
- Threat assessment
  - Environmental
  - Manmade
  - Internal vs. external
- Risk assessment
  - SLE
  - ALE
  - ARO
  - Asset value
  - Risk register
  - Likelihood of occurrence
  - Supply chain assessment
  - Impact
  - Quantitative
  - Qualitative
  - Testing
    - Penetration testing authorization
    - Vulnerability testing authorization
  - Risk response techniques
    - Accept
    - Transfer
<table>
<thead>

</thead>
</table>
| Fuzzing  
- Secure coding concepts  
  - Error and exception handling  
  - Input validation  
- Cross-site scripting prevention  
- Cross-site Request Forgery (XSRF) prevention  
- Application configuration baseline (proper settings)  
- Application hardening  
- Application patch management  
- NoSQL databases vs. SQL databases  
- Server-side vs. client-side validation |  
- Development life-cycle models  
  - Waterfall vs. Agile  
- Secure DevOps  
  - Security automation  
  - Continuous integration  
  - Baselining  
  - Immutable systems  
  - Infrastructure as code  
- Version control and change management  
- Provisioning and deprovisioning  
- Secure coding techniques  
  - Proper error handling  
  - Proper input validation  
  - Normalization  
  - Stored procedures  
  - Code signing  
  - Encryption  
  - Obfuscation/camouflage  
  - Code reuse/dead code  
  - Server-side vs. client-side execution and validation  
  - Memory management  
  - Use of third-party libraries and SDKs  
  - Data exposure  
  - Code quality and testing  
  - Static code analyzers  
  - Dynamic analysis (e.g., fuzzing)  
  - Stress testing  
  - Sandboxing  
  - Model verification |
### 4.2 Summarize mobile security concepts and technologies.

- **Device security**
  - Full device encryption
  - Remote wiping
  - Lockout
  - Screen locks
  - GPS
  - Application control
  - Storage segmentation
  - Asset tracking
  - Inventory control
  - Mobile device management
  - Device access control
  - Removable storage
  - Disabling unused features
- **Application security**
  - Key management
  - Credential management
  - Authentication
  - Geo-tagging
  - Encryption
  - Application whitelisting
- **BYOD concerns**
  - Data ownership
  - Support ownership
  - Patch management
  - Antivirus management
  - Forensics
  - Privacy
  - On-boarding/off-boarding
  - Adherence to corporate policies
  - User acceptance

### 2.5 Given a scenario, deploy mobile devices securely.

- **Connection methods**
  - Cellular
  - WiFi
  - SATCOM
  - Bluetooth
  - NFC
  - ANT
  - Infrared
  - USB
- **Mobile device management concepts**
  - Application management
  - Content management
  - Remote wipe
  - Geofencing
  - Geolocation
  - Screen locks
  - Push notification services
  - Passwords and pins
  - Biometrics
  - Context-aware authentication
  - Containerization
  - Storage segmentation
  - Full device encryption
  - Enforcement and monitoring for:
    - Third-party app stores
    - Rooting/jailbreaking
    - Sideloadin
    - Custom firmware
    - Carrier unlocking
    - Firmware OTA updates
    - Camera use
    - SMS/MMS
| - Architecture/infrastructure considerations | o External media  
| - Legal concerns | o USB OTG  
| - Acceptable use policy | o Recording microphone  
| - On-board camera/video | o GPS tagging  
| | o WiFi direct/ad hoc  
| | o Tethering  
| | o Payment methods  
| | • Deployment models  
| | o BYOD  
| | o COPE  
| | o CYOD  
| | o Corporate-owned  
| | o VDI  

| 4.3 Given a scenario, select the appropriate solution to establish host security. | 2.3 Given a scenario, troubleshoot common security issues.  
| • Operating system security and settings | • Unencrypted credentials/clear text  
| • OS hardening | • Logs and events anomalies  
| • Anti-malware | • Permission issues  
| - Antivirus | • Access violations  
| - Anti-spam | • Certificate issues  
| - Anti-spyware | • Data exfiltration  
| - Pop-up blockers | • Misconfigured devices  
| • Patch management | o Firewall  
| • Whitelisting vs. blacklisting applications | o Content filter  
| • Trusted OS | o Access points  
| • Host-based firewalls | • Weak security configurations  
| • Host-based intrusion detection | • Personnel issues  
| • Hardware security | o Policy violation  
| - Cable locks | o Insider threat  
| - Safe | o Social engineering  
| - Locking cabinets | o Social media  
| • Host software baselining | o Personal email  
| • Virtualization | • Unauthorized software  
| - Snapshots | • Baseline deviation  
| | • License compliance violation (availability/integrity)

- Patch compatibility
- Host availability/elasticity
- Security control testing
- Sandboxing

• Asset management
• Authentication issue

2.4 Given a scenario, analyze and interpret output from security technologies.
  • HIDS/HIPS
  • Antivirus
  • File integrity check
  • Host-based firewall
  • Application whitelisting
  • Removable media control
  • Advanced malware tools
  • Patch management tools
  • UTM
  • DLP
  • Data execution prevention
  • Web application firewall

3.3 Given a scenario, implement secure systems design.
  • Hardware/firmware security
    o FDE/SED
    o TPM
    o HSM
    o UEFI/BIOS
    o Secure boot and attestation
    o Supply chain
    o Hardware root of trust
    o EMI/EMP
  • Operating systems
    o Types
      ▪ Network
      ▪ Server
      ▪ Workstation
      ▪ Appliance
      ▪ Kiosk
      ▪ Mobile OS
4.4 Implement the appropriate controls to ensure data security.

- Cloud storage
- SAN
- Handling Big Data
- Data encryption
  - Full disk
  - Database
  - Individual files
  - Removable media
  - Mobile devices
  - Hardware-based encryption devices
    - TPM
    - HSM
    - USB encryption
    - Hard drive
  - Data in transit, data at rest, data in use
- Permissions/ACL
- Data policies

2.5 Given a scenario, deploy mobile devices securely.

- Connection methods
  - Cellular
  - WiFi
  - SATCOM
  - Bluetooth
  - NFC
  - ANT
  - Infrared
  - USB
  - Mobile device management concepts
    - Application management
    - Content management
    - Remote wipe
    - Geofencing
    - Geolocation
    - Screen locks
    - Push notification services
### Wiping
- Passwords and pins
- Biometrics
- Context-aware authentication
- Containerization
- Storage segmentation
- Full device encryption
- **Enforcement and monitoring for:**
  - Third-party app stores
  - Rooting/jailbreaking
  - Sideloadin
  - Custom firmware
  - Carrier unlocking
  - Firmware OTA updates
  - Camera use
  - SMS/MMS
  - External media
  - USB OTG
  - Recording microphone
  - GPS tagging
  - WiFi direct/ad hoc
  - Tethering
  - Payment methods
- **Deployment models**
  - BYOD
  - COPE
  - CYOD
  - Corporate-owned
  - VDI

### 3.7 Summarize cloud and virtualization concepts.
- Hypervisor
  - Type I
  - Type II
- Application cells/containers
- VM sprawl avoidance
- VM escape protection
• Cloud storage
• Cloud deployment models
  o SaaS
  o PaaS
  o IaaS
  o Private
  o Public
  o Hybrid
  o Community
• On-premise vs. hosted vs. cloud
• VDI/VDE
• Cloud access security broker
• Security as a Service

5.8 Given a scenario, carry out data security and privacy practices.
  • Data destruction and media sanitization
    o Burning
    o Shredding
    o Pulping
    o Pulverizing
    o Degaussing
    o Purging
    o Wiping
  • Data sensitivity labeling and handling
    o Confidential
    o Private
    o Public
    o Proprietary
    o PII
    o PHI
  • Data roles
    o Owner
    o Steward/custodian
    o Privacy officer
  • Data retention
  • Legal and compliance
4.5 Compare and contrast alternative methods to mitigate security risks in static environments.

- Environments
  - SCADA
  - Embedded (printer, smart TV, HVAC control)
  - Android
  - iOS
  - Mainframe
  - Game consoles
  - In-vehicle computing systems

- Methods
  - Network segmentation
  - Security layers
  - Application firewalls
  - Manual updates
  - Firmware version control
  - Wrappers
  - Control redundancy and diversity

3.2 Given a scenario, implement secure network architecture concepts.

- Zones/topologies
  - DMZ
  - Extranet
  - Intranet
  - Wireless
  - Guest
  - Honeynets
  - NAT
  - Ad hoc

- Segregation/segmentation/isolation
  - Physical
  - Logical (VLAN)
  - Virtualization
  - Air gaps

- Tunneling/VPN
  - Site-to-site
  - Remote access

- Security device/technology placement
  - Sensors
  - Collectors
  - Correlation engines
  - Filters
  - Proxies
  - Firewalls
  - VPN concentrators
  - SSL accelerators
  - Load balancers
  - DDoS mitigator
  - Aggregation switches
  - Taps and port mirror
  - SDN

3.5 Explain the security implications of embedded systems.
<table>

  - Single sign-on
  - Transitive trust

4.3 Given a scenario, implement identity and access management controls.

  - Access control models
    - MAC
    - DAC
    - ABAC
  - Role-based access control
  - Rule-based access control
  - Physical access control
    - Proximity cards
    - Smart cards
  - Biometric factors
    - Fingerprint scanner
    - Retinal scanner
    - Iris scanner
    - Voice recognition
    - Facial recognition
    - False acceptance rate
    - False rejection rate
    - Crossover error rate
  - Tokens
    - Hardware
    - Software
    - HOTP/TOTP
  - Certificate-based authentication
    - PIV/CAC/smart card
5.3 Install and configure security controls when performing account management, based on best practices.

- Mitigate issues associated with users with multiple account/roles and/or shared accounts
- Account policy enforcement
  - Credential management
  - Group policy
  - Password complexity
  - Expiration
  - Recovery
  - Disablement
  - Lockout
  - Password history
  - Password reuse
  - Password length
  - Generic account prohibition
- Group-based privileges
- User-assigned privileges
- User access reviews
- Continuous monitoring

4.3 Given a scenario, implement identity and access management controls.

- Access control models
  - MAC
  - DAC
  - ABAC
- Role-based access control
- Rule-based access control
- Physical access control
  - Proximity cards
  - Smart cards
- Biometric factors

### 6.3 Given a scenario, use appropriate PKI, certificate management and associated components.

- Certificate authorities and digital certificates
- CA
- CRLs
- OCSP
- CSR
- PKI
- Recovery agent
- Public key
- Private key
- Registration
- Key escrow
- Trust models

### 6.4 Given a scenario, implement public key infrastructure.

- Components
  - CA
  - Intermediate CA
  - CRL
  - OCSP
  - CSR
  - Certificate
  - Public key
  - Private key
  - Object identifiers (OID)
- Concepts
  - Online vs. offline CA
  - Stapling
  - Pinning
  - Trust model
  - Key escrow
  - Certificate chaining
- Types of certificates
  - Wildcard
  - SAN
  - Code signing
  - Self-signed
  - Machine/computer
  - Email
  - User
  - Root
  - Domain validation
  - Extended validation
- Certificate formats
  - DER
  - PEM
  - PFX
### 1.3 Explain threat actor types and attributes.
- **Types of actors**
  - Script kiddies
  - Hacktivist
  - Organized crime
  - Nation states/APT
  - Insiders
  - Competitors
- **Attributes of actors**
  - Internal/external
  - Level of sophistication
  - Resources/funding
  - Intent/motivation
- Use of open-source intelligence

### 1.6 Explain the impact associated with types of vulnerabilities.
- **Race conditions**
- **Vulnerabilities due to:**
  - End-of-life systems
  - Embedded systems
  - Lack of vendor support
- **Improper input handling**
- **Improper error handling**
- **Misconfiguration/weak configuration**
- **Default configuration**
- **Resource exhaustion**
- **Untrained users**
- **Improperly configured accounts**
- **Vulnerable business processes**
| • Weak cipher suites and implementations  
| • Memory/buffer vulnerability  
| o Memory leak  
| o Integer overflow  
| o Buffer overflow  
| o Pointer dereference  
| o DLL injection  
| • System sprawl/undocumented assets  
| • Architecture/design weaknesses  
| • New threats/zero day  
| • Improper certificate and key management |

3.4 Explain the importance of secure staging deployment concepts.  
• Sandboxing  
• Environment  
 o Development  
 o Test  
 o Staging  
 o Production  
• Secure baseline  
• Integrity measurement
