Quarter Previous Year Units Programming Language

-100 +100

Showing: Programming Language Quarter/Previous Year Units

Users First

- Nothing else matters
- The interface is the application

Usability

“Usability is a term used to denote the ease with which people can employ a particular tool or other human-made object in order to achieve a particular goal”

- Helping users achieve their goals
- With great power comes great responsibility
- Helping users kick ass!

Factors

- Learnability
- Memorability
- Effectiveness
- Efficiency
- Satisfaction ;-)

Benefits

- Higher rates of task success
- Happier users
- More efficient users
- Saving time for users
- ROI

Why RIA?

- User Retention
- Brand Development
- User Efficiency
 - Steps to complete a task
 - Training costs
- Uninterrupted workflow
- Time spent waiting*

Seconds to Complete Task

140

120

100

Traditional Architecture

RIA Architecture

Financial ROI

*Hourly (Loaded)
Labor Rate*

X

Time Saved per Transaction

X

Number of Transactions per year

Run the numbers...

Assumptions:

Hourly Labor Rate: \$20

Seconds Saved per Transaction: 36 Seconds

Number of Transactions per year: 50,000

Savings:

\$10,000

500 Person Hours

Usability Testing

- Doesn't have to be expensive
- Has to be done
- What to test:
 - Time for task completion
 - Accuracy (# of mistakes)
 - Recall
 - User satisfaction

Usability Testing: How to do it

- Recruit users
- Design scenarios
- Participant Narration
- No egos
- Record the session
- Test small, test often

Usability Testing Resources

- User Interface Engineering by Jakob Nielsen
- Ethnio - remote testing services
- Usability.gov

Usability Data

- Microsoft designed the new office UI, the ribbon, based on lots of data
- 1.2 billion data sessions collected
- ~1.8 million sessions per day
- In 90 days, they tracked 352 million command bar clicks in Word
- Tracked 6000 individual datapoints

Analysis Tools

- RobotReplay
- Adobe Connect
- Google Analytics (Events)

Google Analytics Demo

RobotReplay Demo

Connect Demo

Ajax Pitfalls

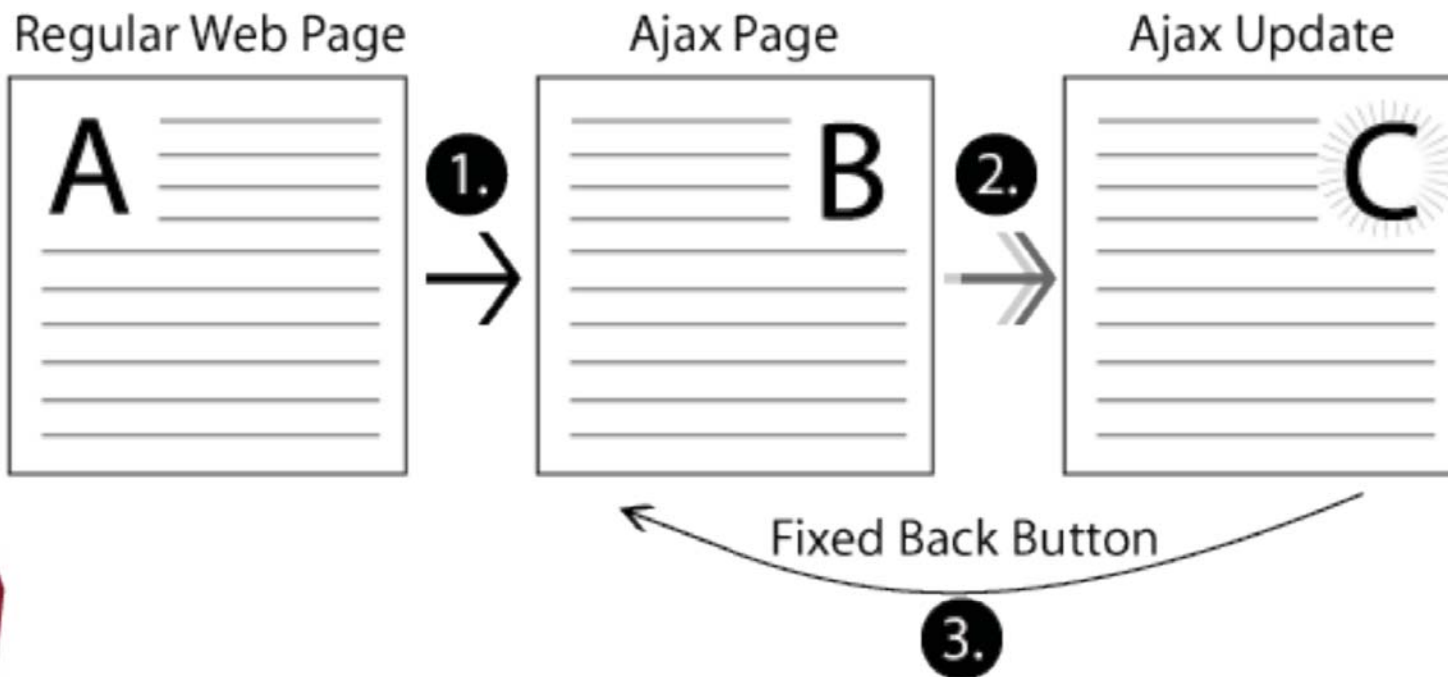

- Back Button
- Bookmarking
- Confusion
- Performance

Broken Back Button

What Users Expect

Fix

- #
- Build a state record
- GWT

Performance

- Perceived vs Real
- User perceptions are more important
 - Task complexity
 - Jitter (variability of latency)
 - Wait time

Page Weight

- For Example
 - HTML size—10 KB
 - JavaScript attachments— 45 KB
 - Size of all images—25 KB
 - Total Page Weight—80 KB
- Average download time
 - with 56-K modem: 13.3 seconds (6 KB per second)
 - With DSL connection: 2.67 seconds (30 KB per second)

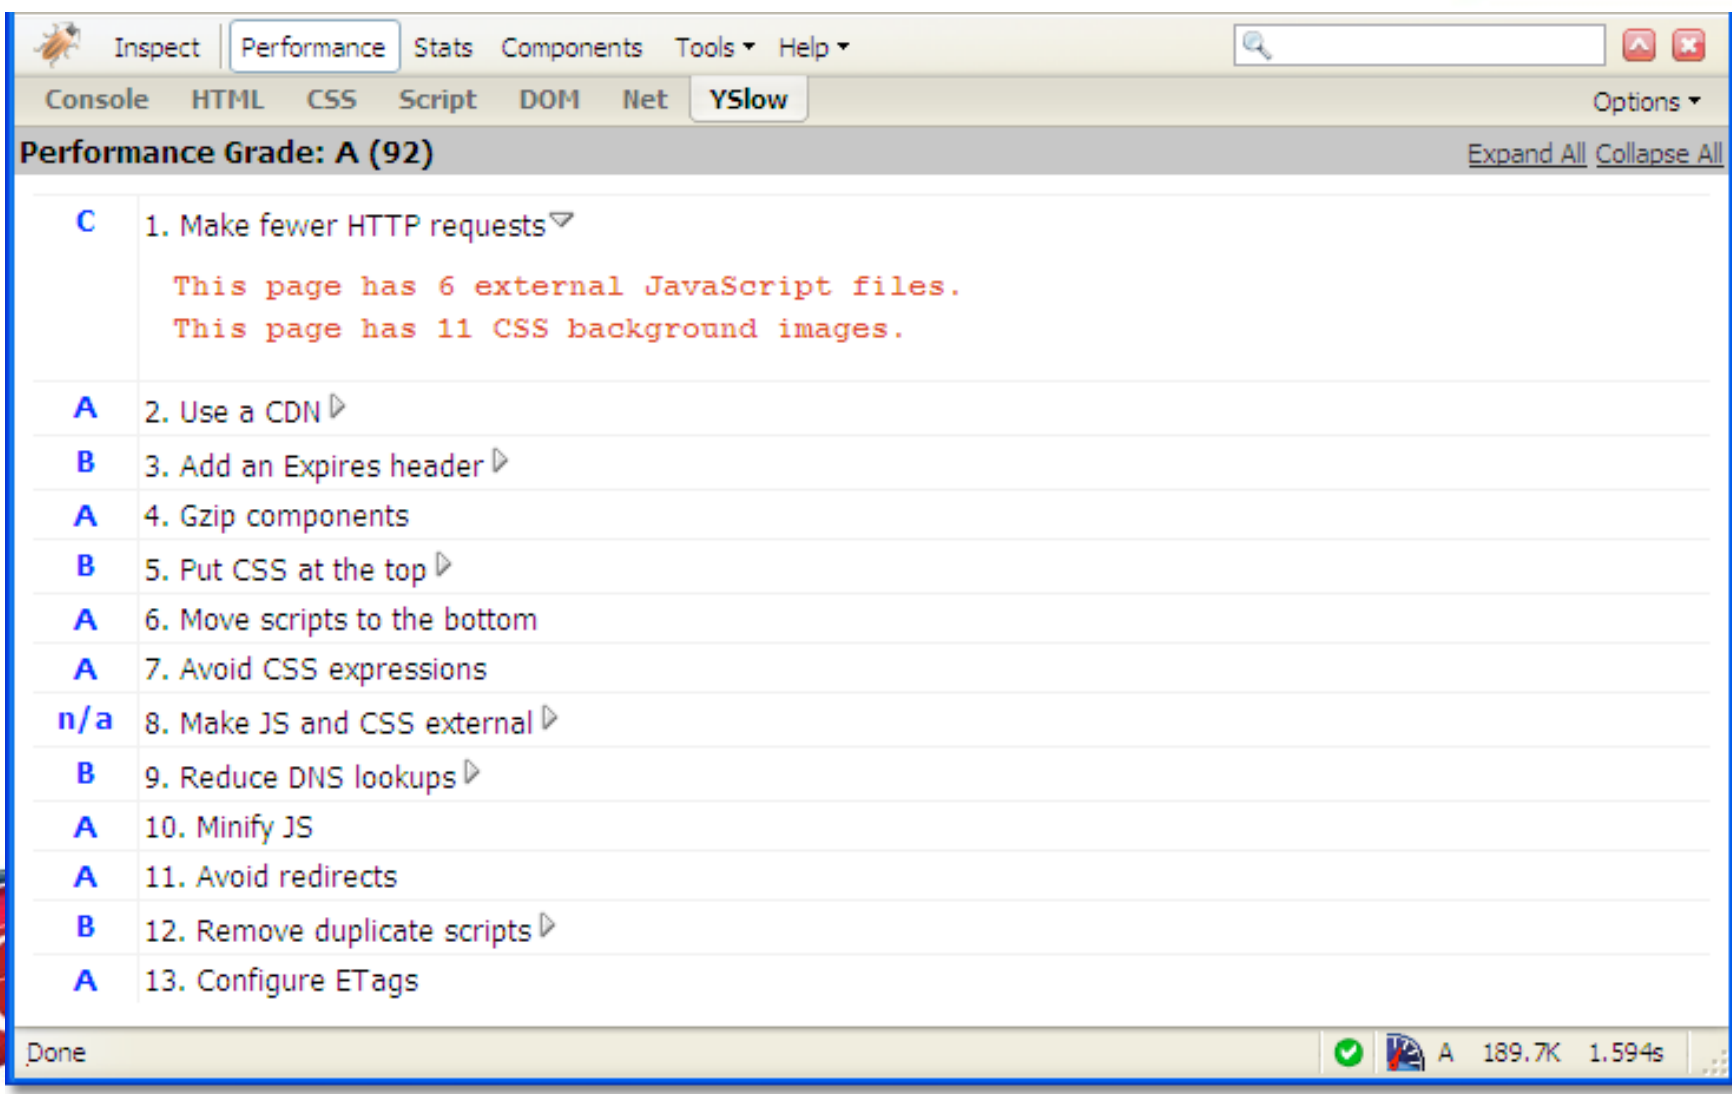

Wait Time Guidelines

- <1 Second - Don't worry
- 1-10 Seconds Activity indicator
- >10 Seconds - Progress Bar
- Favor Usability over Page Weight

Technical Performance Tips

- Take advantage of Caching
- Reduce File Count
- Optimize JavaScript
- gZIP JavaScript and CSS
- More resources
-  - Y Slow
- High Performance Websites

Inspect Performance Stats Components Tools Help

Console HTML CSS Script DOM Net **YSlow** Options

Performance Grade: A (92) [Expand All](#) [Collapse All](#)

C	1. Make fewer HTTP requests <i>This page has 6 external JavaScript files. This page has 11 CSS background images.</i>
A	2. Use a CDN
B	3. Add an Expires header
A	4. Gzip components
B	5. Put CSS at the top
A	6. Move scripts to the bottom
A	7. Avoid CSS expressions
n/a	8. Make JS and CSS external
B	9. Reduce DNS lookups
A	10. Minify JS
A	11. Avoid redirects
B	12. Remove duplicate scripts
A	13. Configure ETags

Done A 189.7K 1.594s

Accessibility

- You can't have usability without it
- Helping impaired users
- Not just blind (more vocal)

Automation

- Generally doesn't work with Ajax
- Wrong assumptions
- Dynamic and changing pages

Accessibility Barriers

Sight	Keyboard & Mouse
Hearing	Text Only
Movement	Connection
Information	Language
Reading	Distractions
Comprehension	Browser

Challenges

- W3C says should work without without JS
- Focus is on screen readers
 - Jaws
- Graceful degradation doesn't cut it
- Come back with reader X doesn't cut it

Screenreaders: Jaws

- Jaws is the primary screen reader on the market
- Based on IE
- Alternatives: Windows Eyes, Hal, Home Page Reader

How Jaws Works

- Virtual Buffer
- Snapshot of DOM
- 2 Modes
 - “Virtual PC Cursor Mode” is standard
 - “PC Cursor Mode” is needed for Ajax
- Older versions IE only
- Jaws 7.0 works with FireFox

Keyboard Accessibility

- Minimize swapping between input devices
- Keyboard Accessibility for everybody
- Conform to accepted standards
 - MS Windows UE Guidelines (<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/dnwue/html/ch08c.asp>)
- Test with MS Object Inspector

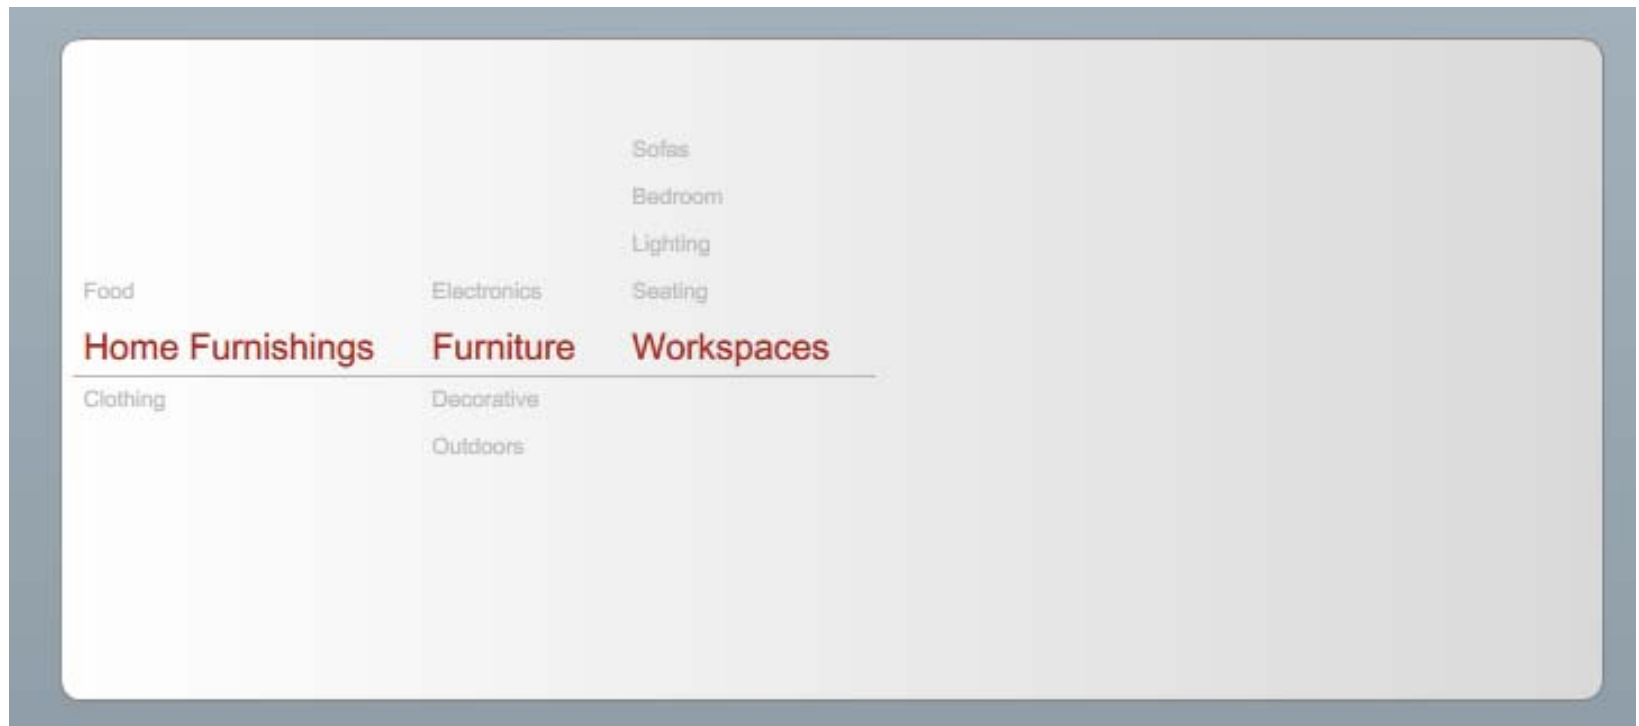

Tree Guidelines

- Use Arrow Keys
- Up and Down move between items
- Left and right move along a branch
- Right arrow can expand a branch
- Left arrow collapses or moves to parent
- Enter selects the contents of a node

Random Walk Example

- Ely Greenfield's sample

Jaws Protected Strokes

- Ctrl: stops the reader
- Ctrl + Home: restart reading from the top
- Down Arrow: read the next line
- Enter: Activates a link or button

Use Common Sense

- Don't barry popular options in tabs
- Use tab order with `tabindex`
- Copy popular desktop and web apps
 - i.e. Outlook, Gmail, etc..

Break

Design and Patterns

Design Techniques

- User interface patterns
- Mock Ups
- Paper Prototypes
- Keep it simple
- Familiar vs. intuitive

Tools

- Tools and techniques for rapid prototyping
 - Storyboard
 - Wire frames
 - Visio
 - Power Point
 - Photoshop
 - Flash/Flex
 - Axure
 - ProtoScript

Figure 1 - Expanded mode, Genre view

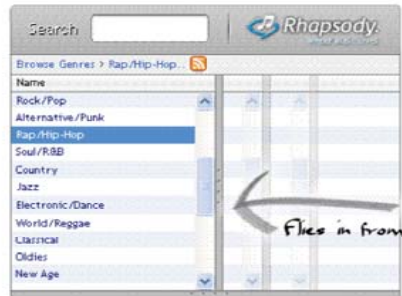

XML feed link from each view

Figure 5 - Live-search mode. Artist list appearing as the user types.

Searches as the user types..

Figure 2 - Artist view transition - flying in from the right.

Flies in from right

Figure 3 - Artist view

clickable bread crumb trail

Figure 4 - Track view transition - flying in from bottom.

Flies in from bottom

Figure 5 - Track view

Launches the player

Figure 6 - Compact-mode, Genre view

Figure 7 - Artist view transition - flies in from bottom

Flies in from bottom

Figure 8 - Artist view

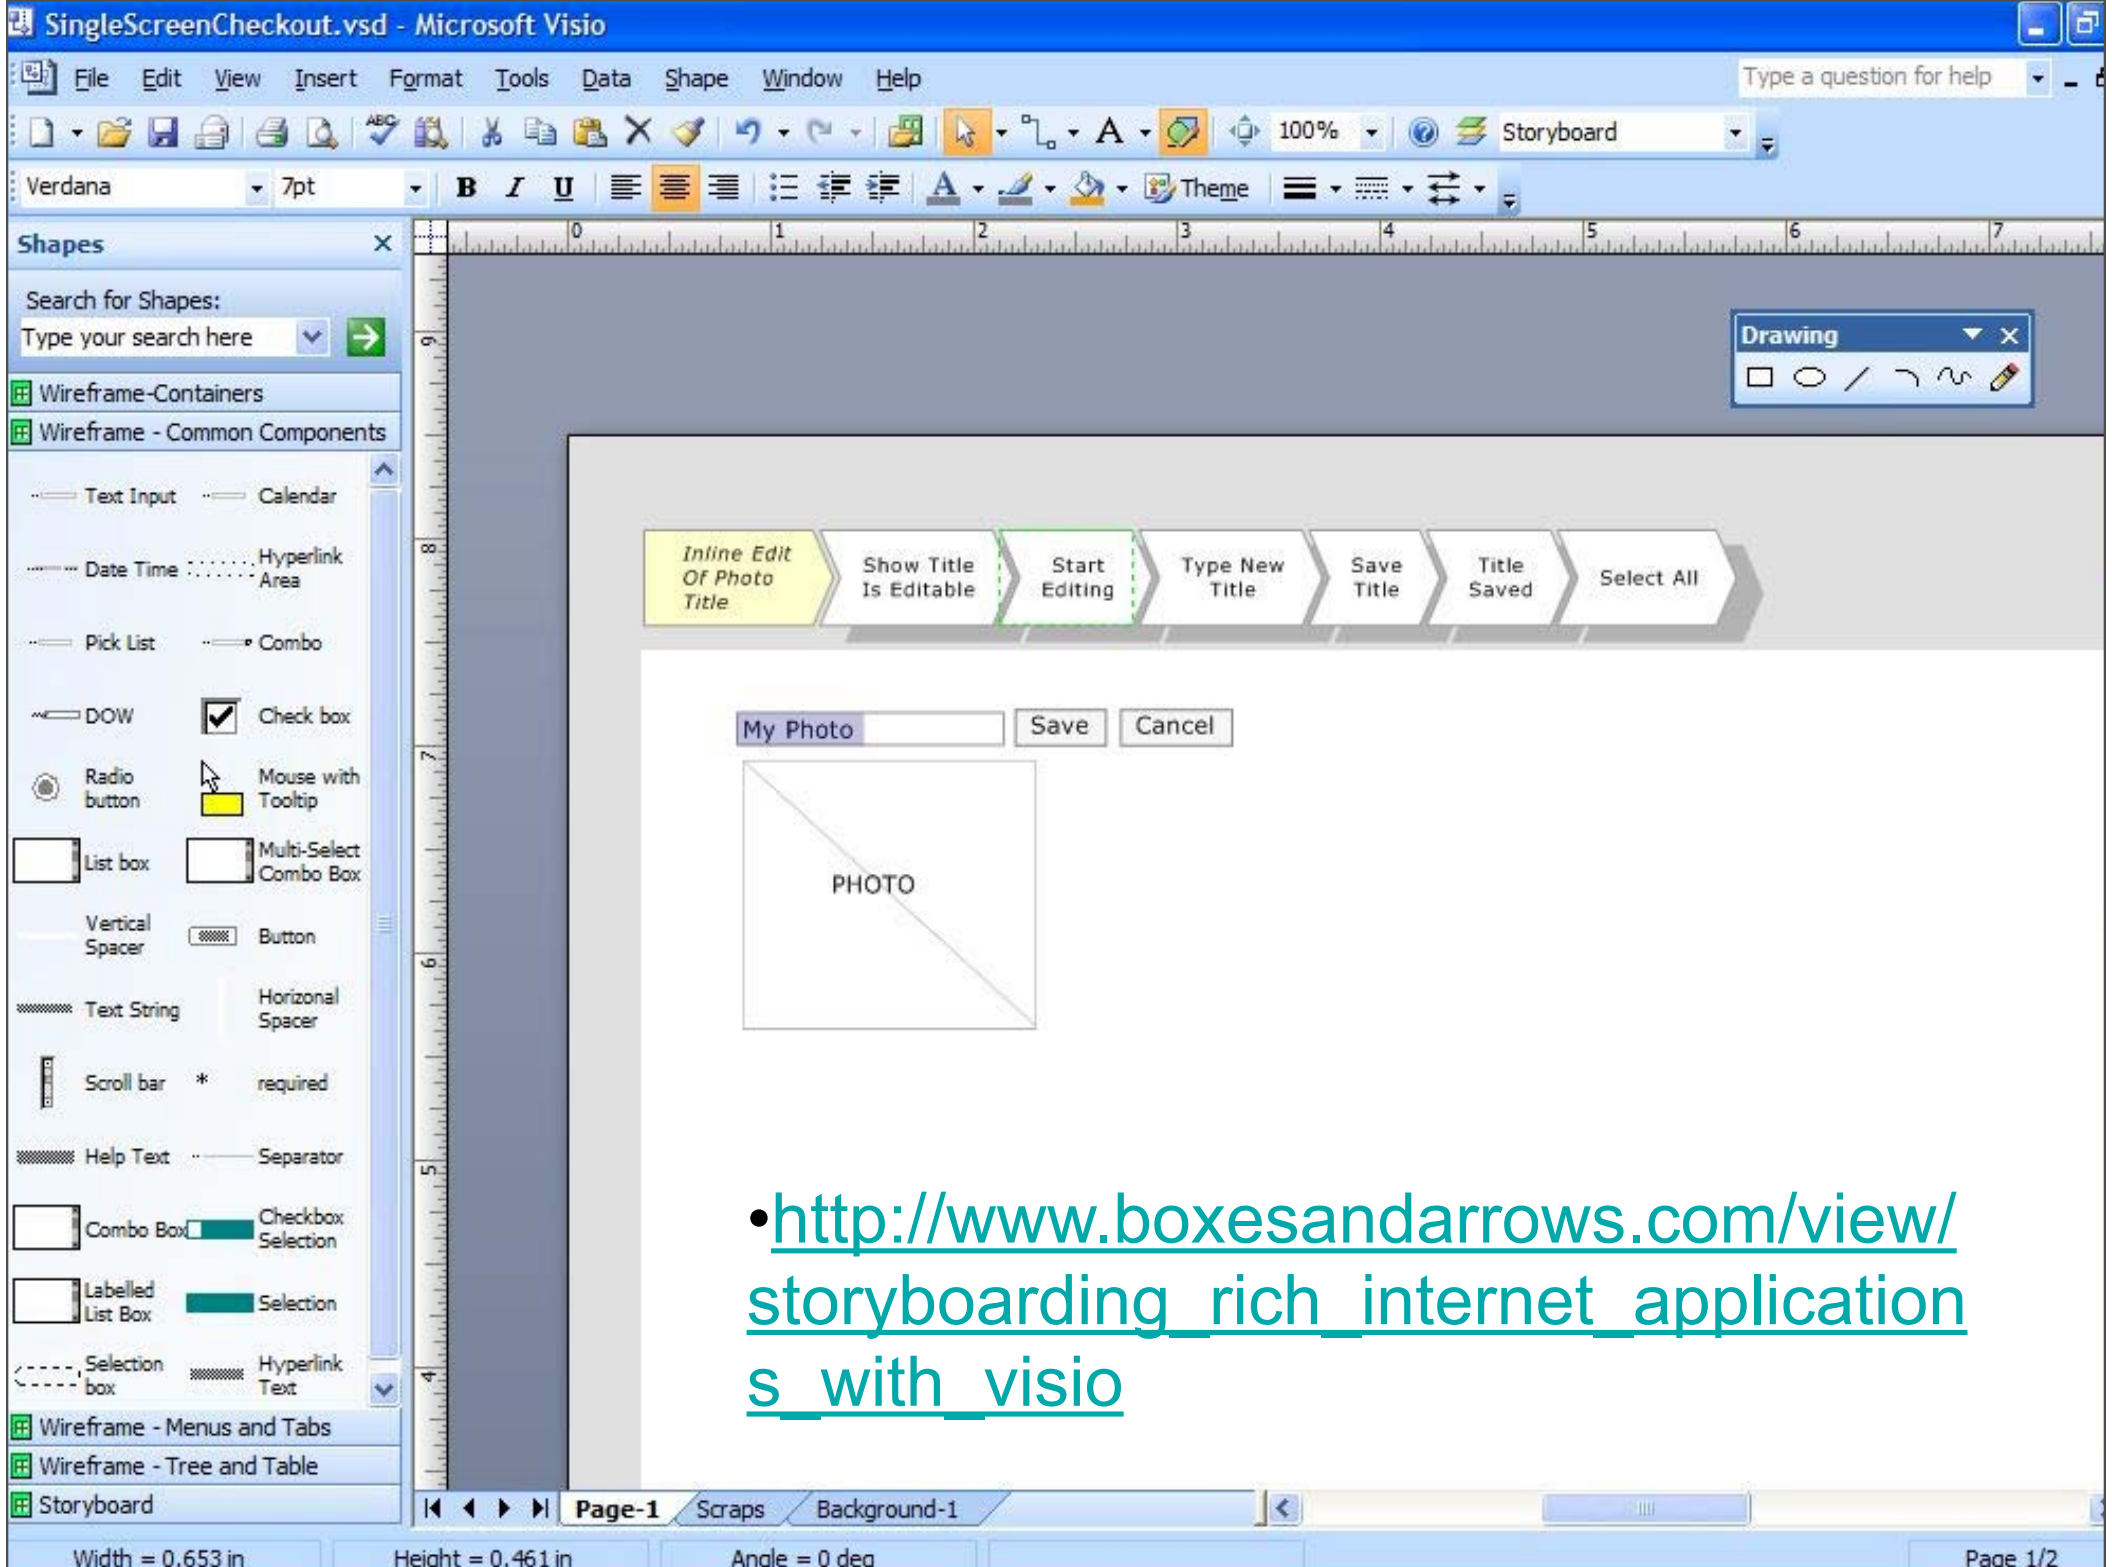

Figure 9 - Track view transition - flies in from bottom

Figure 10 - Track view

should fit nicely into a Blog sidebar.

Words of Wisdom

“If you think you need something never created before, think twice about it” - Bill Scott

Patterns

- Same Problem, Same Solution
- Applications
- Problems solved
- Pitfalls

Design Tips

1. Make it directly interactive
2. Make it inviting
3. Use lightweight, in-context popups instead of page transitions where possible
4. Use real-estate creatively
5. Cross page boundaries reluctantly
6. Create a light footprint
7. Think of your interactions as storyboards
8. Communicate transitions
9. Think in objects

<http://looksgoodworkswell.blogspot.com/2006/01/nine-tips-for-designing-rich-internet.html>

Drag and Drop

- Use When
 - you want to manipulate a natural visual model of objects
- Potential Pitfalls
 - starting with drag & drop
 - using it to set a single attribute
 - constructing artificial visual constructs
 - using it for removal
 - confusing drag ghost with drag object
 - user's don't get it
 - creating page jitter

Progress Bars

- Use When
 - needing to show upload status
- Possible Pitfalls
 - non-accurate progress indication
- Best Practices
 - place the indicators as close to the file names as possible
 - finish with “completed” status if displayed in grid... otherwise finish with status and fade out

Upload Progress

Show a progress bar during file uploads

Demo - 2MB limit

C:\Documents and Settings\Alexei

40.0 KB of 175.5 KB at 26.0 KB/s; less than 5 seconds remaining

Activity Indicators

- Use When
 - need to show system is processing
 - want to show indication in context
- Possible Pitfalls
 - can be distracting if not necessary
- Best Practices
 - place the busy indication as close to the use input as possible
 - use small animated indicator beside input or inside input field
 - place the busy indication at the place where the results will appear
 - use an overlay with translucency if redirecting attention
 - don't use too many indicators as it will make for a noisy interface
 - avoid using indicator if delay is really short (<1 Sec)

Fading and Color Changing

- Use When
 - need to spotlight a change occurred
- Possible Pitfalls
 - if too many places, can be distracting
- Best Practices
 - use in just one or two selected areas
 - if more, make sure that there aren't too many updating at once
 - if area is large, consider more subtle coloring
 - fade out quickly (usually less than one second; but much faster is acceptable)

Rollovers

- Use When
 - need to show detail in context
- Potential Pitfalls
 - popup too quick
 - popup too slow, seem sluggish
- Best Practices
 - show detail after 0.25 second delay
 - dismiss immediately on mouse out or click

In-Place Editing

- Use When
 - item being edited is multi-field
 - you want to be explicit about the edit mode
- Potential Pitfalls
 - discoverability
 - too subtle of invitation
 - clutter visual display w/ invitations
 - making page jump

Master Detail

- Use When
 - Browsing relational data
- Possible Pitfalls
 - Confusing to user
- Best Practices
 - Drill Down
 - Keep it light
 - Provide indicator during wait

Customer List				Sales for Customer

Live Search

- Use When
 - user needs to search for content and are uncertain on the correct keywords.
- Potential Pitfalls
 - if results are returned too quick, will be distracting
 - if results are not returned quick enough, it will feel sluggish
- Best Practices
 - start returning results when the user “slows down” typing
 - show results below text entry field for feedback

Customers 1-16		Name: <input type="text" value="Alpha"/>
Customer	Balance	
Alpha 3000	-\$99,484.00	
Alpha Applications	\$0.00	
Alpha Communications LTD	\$5,626,565.00	
Alpha Constructions INC	\$339.00	
Alpha Eastern	\$0.00	
Alpha Solutions	\$791.00	
AlphaApproach Llc.	\$146.00	
AlphaCentric Llc.	\$0.00	
AlphaCentricity INC	\$756.00	
AlphaDesign	\$72.00	
AlphaIT Solutions Llc.	\$0.00	
AlphaPad Inc.	\$1,239.00	
AlphaStaff IT Inc.	\$0.00	

Live Scrolling

- Use When
 - chunking data would affect user flow
 - content is data; not search results
 - data content will be sorted, filtered, etc.
 - selection model is continuous

- Potential Pitfalls

- dual-scrollbar issue
- sluggish performance
- extremely large data sets

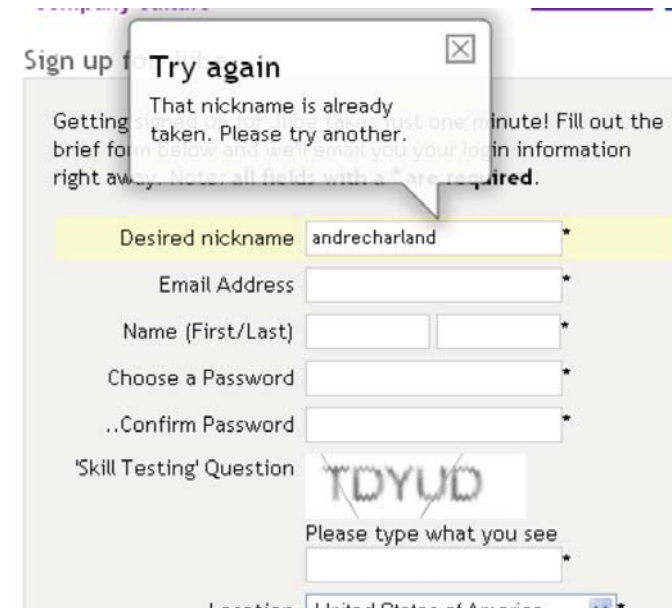

- Best Practices

- provide dynamic tooltip showing location within scroll
- animate scroll

Live Form

- Use When
 - User entered data needs to be validated on the fly and cannot be checked locally
- Best Practices
 - Generation of new fields is required
 - Validation and feedback from the server is needed
 - Removing or disabling parts of the form
 - Submitting data to the server before completion
 - Server side validation without refresh

Sign up for... **Try again**

'Skill Testing' Question

Please type what you see

Location

Invitation

- Use When
 - You want to invite the user to click or interact with the object being hovered over.
- Potential Pitfalls
 - discoverability
- Best Practices
 - use hover to reveal interaction
 - use the familiar to teach the new
 - use tours sparingly
 - think of how it will interact with rest of page

Auto Complete

- Use When
 - The users needs to quickly and accurately select from a large list
- Potential Pitfalls
 - displaying completions too soon
 - displaying completions too often
- Best Practices
 - don't require the user to arrow or mouse to the selected item
 - tab should select the best match
 - delay popup until user
 - slows typing

Object Selection

- Use When
 - in a scrolled table
 - selecting objects
- Potential Pitfalls
 - complexity of contiguous vs. discontinuous
 - using CTRL for discontinuous will not work on Macintosh
- Best Practices
 - allow multiple selection
 - allow discontinuous selection

Contact Name	Contact Email	Job Title
Tammara Farley	tamfarley@halifax.com	Media Director
Dwana Barton	dwabarton@ebadev.com	Budget Analyst
Mercedes Carpenter	mcarpenter@purosyntax.net	Finance Manager
Lucas Blake	lblak@freeinterweb.com	Marketing Manager

Jose Bishop	josebishop@voxcom.ca	Branch Manager
Emilia Foster	efoster@extreme.net	Pavroll Manager

Periodic Refresh

- Use When
 - content is based on live information
 - for enticing users to click-through
- Potential Pitfalls
 - can be distracting if not primary
- Best Practices
 - if secondary to page, then make refreshes less frequent and simple
 - if primary to page, then make refreshes more frequent & visible

Composite Patterns

- eCommerce
- Search
- Multiple patterns in harmony
- Real world

Single Page Checkout Demo

- One Page
- Not crossing pages
- Liveforms
- Goal increase conversion rates
- ElasticPath.com

Dynamic Searching

- Dynamic Searching
- Hover
- Live Scrolling
- Adiamor.com

Auto Commit

- Protect the user with “Auto Save”
- Careful of permanent changes
- Confirmation
- Acceptance
- Undo (multi level)

Polling and Push

- Polling is often good enough
- Push often needs some some none JS
 - I.e. Flash
 - Comet

Pattern Resources

- Identify Patterns
 - Good
 - Bad

- Discuss

Risks

Technical Risks

- Design
- Development
- Maintenance
- Security
- Browser Capabilities
- Timeline and Cost

Cultural and Political Risks

- Usability
- User experience
- Attitudes
- Expectations
-

Marketing Risks

- Penetration
- Sales
- Donations
- Branding
- Sign Ups

Reach vs Rich

Search Engines

- Definitely a risk for public apps
- Search engines are adapting
 - Google Events
- Unique URLs
- Be careful with “black hat” techniques

SEO Tips

- Avoid Ajax (use sparingly)
 - For Primary Navigation
 - Content driven site where SERPs are important
 - Links that need to be followed by bots

Reach

- Very real marketing risk
- 3% - 10% of public has JS turned off*
- Radically different or UIs can intimidate
- Lower search engine can affect business
- Apps will have to balance this vs innovation to gain market share

Monetization

- Ok for Cost Per Click (CPC)
- Bad for Cost Per Impression (CPM)
- Event trigger for ads?
- Content matching

Risk Mitigation

- Use a framework or components
- Progressive enhancement
- Google sitemaps
- Visual cues and enhancements
- Avoid gold plating
- Pick your revenue model carefully

Offline Ajax

- Google Gears
- Adobe AIR
- FireFox 3.0
- Local Data Storage (IE, FireFox, Flash)

Action Plan

- Recognize the need for usability
- Get management support
- Devote specific resources
- Integrate systematic practices
- Test all interfaces for usability
