- carrier network timing, 671
- clock sources, 672–673
- IGX, 305
- CAS (Channel Associated Signaling), 125
- Cascade, 6
- CBR (Constant Bit Rate), 566, 1003
 - characteristics, modifying, 1021
 - configurable parameters, 618
 - connections, adding, 262–264
 - example, 1007
 - policing, 248, 574–575
 - characteristics, modifying, 1030
- CCS (Common Channel Signaling), 125
- CDVT (Cell Delay Variation Tolerance), 364, 883, 1005
 - time-based model, 1007
- cell delay, 364
- Cell Delay Variation Tolerance, 364, 883, 1005
- cell loss, 364
- cell loss priority (CLP), 210
- cell rate, 364
- Cellbus (Cisco IGX switches), 30–31
- cells (ATM), 365–367
 - AUSM traffic flow
 - egress traffic, 978
 - ingress traffic, 977–978
 - CLP (Cell Loss Priority), threshold level, 533
 - payloads for IGX networks, 61
 - traffic shaping, 534
 - implementing, 534–535
 - port level, 535
 - transmission over unframed trunks, 63
- CESM (Circuit Emulation Service Module), 748–749
 - circuit emulation ports, listing, 886
 - circuit emulation services, creating, 897–899
 - egress queues, 882–884
 - historical channel statistics counters, listing, 896–897
 - ingress traffic, 883
 - ports, displaying configuration information, 887
- changing BPX CLI passwords, 426

- Channel Associated Signaling, 125
- Channel Range field (dspport command output), 197
- Channel Speed field (dspport command output), 197
- channelized narrowband FRSMs, 908
- channels, 564
 - listing on PXM1 UNI ports, 1027–1028
 - statistics levels, 633
 - utilization, 285
- characteristics
 - of ABR, modifying, 1022–1023
 - of CBR, modifying, 1021, 1030
 - of connections, 285–286
 - data connections, 143
 - of ForeSight, modifying, 1020
 - of ingress VCs
 - modifying, 1024
 - queues, 1032
 - of leaky bucket models, 1005
 - of QBins, 975–976
 - modifying, 987
 - of UBR, modifying, 1032
 - of VBR, modifying, 1021–1022, 1031
 - of VC queues, 254, 1014
- chassis, BPX switches, 373
- CIDs
 - adding to connections, 1085–1086
 - displaying for specified LCN, 1086
- circuit emulation connections, 879
 - clocking modes, 882

 - configurable parameters, 619
 - connections, adding, 264–267
 - example, 1008
 - modifying characteristics, 1021–1022
 - policing characteristics, modifying, 576–580, 1031
 - traffic policing, 248–250
- VC (virtual circuit) queues, 402, 532, 946–947, 977
 - adjusting, 216
 - characteristics, 1014
 - congestion control, ABRFST rate
 - adjustment, 261
 - IBS, 947
 - on ABR connections, 254
 - on AUSM, 1012
 - configuration example, 1014
 - frame-based traffic control, 1012
 - parameters, 212
 - thresholds, 583
- VC shaping parameter (IGX trunks), 79
- VCS (virtual circuits)
 - CoS, 1003
 - CBR example, 1007
 - VBR example, 1008
 - PVCs, 851, 853
 - circuit emulation connections, 879, 880
 - example, 856–858
 - on RPM, 1124
 - provisioning, 852
 - SPVCs, 853–854
 - example, 858
 - provisioning, 866–868
 - status information, displaying, 872–875
 - SVCs, 855–856
 - example, 859
- VD (virtual destination), 256
- verifying
 - APS operation, 518–520
 - BPX card installation, 436–439
 - BPX node names, 442
 - BXM card statistics level, 635
 - Level 1, 636–638
 - Level 2, 639–640
 - Level 3, 641–643
 - continuity of connections, 1037
 - Frame Relay line configuration, 188
- versions of APS, 502–504
- VIs (Virtual Interfaces), 466–467, 529, 532
- virtual ports, 529–530
 - creating, 538
 - port queues, 532–533
 - PVCs, signaling protocols, 535–537
 - versus physical ports, 531
- virtual trunk type parameter (IGX trunks), 78
- virtual trunk VPI parameter (IGX trunks), 78
- virtual trunks, 465, 466
 - BPX support, 467
 - displaying statistics, 482–483
 - parameters, configuring, 477
 - resource partitions, 468
 - example, 471–473
 - resource allocation, 469–470
 - statistical alarms, clearing, 698
 - versus physical trunks, 466
- VISM (Voice Interworking Service Module), 750
 - AAL2 coding schemes, 1063
 - AAL2 trunking mode, 1064
 - clocking options, 1070–1073
 - connections, listing summary status
 - information, 1082
 - DSPs, 1070
 - endpoints
 - adding, 1079, 1080
 - displaying detailed information, 1081
 - listing, 1080
 - historical connection statistics counters, listing, 1088–1089
 - PCM, converting voice samples to ATM cells, 1061
 - port status, displaying, 1076
 - Release 1.5 features, 1056–1058
 - Release 2.0 features, 1058
 - Release 2.1 features, 1058

- resource partitions, creating, 1077
 - VoATM services, creating, 1067–1070
 - voice connections, adding, 1082
 - voice mode, changing, 1076
 - voice mode configuration, displaying, 1074–1075
 - VoIP mode, 1065, 1067
 - VoAAL2 (Voice over AAL2) trunking mode, 1064
 - VoATM services, creating on VISM, 1067–1070
 - voice card group, Cisco IGX switches, 22
 - voice channels, 101, 115
 - conditioning templates, 133
 - configuring, 135–136
 - displaying, 134
 - configuring, 130–132
 - connection state, displaying, 132–133
 - echo, 122
 - Fax Relay, configuring, 119–120
 - gain, 120–121
 - PCM voice sample processing, 116
 - signaling, 126
 - bit conversion, 136–140
 - bit interpretation, 130
 - bit timing, 126
 - bit transport, 126
 - timing parameters, displaying, 129–130
 - summary configuration information, displaying, 140–141
 - utilization, configuring, 116–117
 - VAD, 116
 - voice compression schemes
 - ADPCM, 103–104
 - CS-ACELP, 104
 - LD-CELP, 104
 - voice connections, 101, 1059
 - AAL2 segmentation, 1062–1063
 - adding, 106–108, 111–112
 - CIDs, 1059
 - adding, 1085–1086
 - listing for specified LCN, 1086
 - deleting, 115
 - displaying, 112–113
 - displaying detailed parameters, 114
 - endpoints, 1059
 - voice channels
 - connection state, displaying, 132–133
 - echo, 122
 - gain, 120–121
 - level loss plan, 121
 - voice FastPackets, 102
 - voice lines, 101
 - VPC conns parameter (IGX trunks), 79
 - VPCs (Virtual Permanent Circuits), virtual trunks, 465–466
 - VPI address parameter (IGX trunks), 75
 - VPNs, MPLS, 1103–1105
 - distribution of routing information, 1106
 - label forwarding, 1106
 - route-target communities, 1105
 - VS (virtual source), 256
 - VS/VD (Virtual Source/Virtual Destination), 571
 - VSI (Virtual Switch Interface) controllers, 395, 468–469
 - VSI-MPLS, resource partitioning, 491
 - VSI-PNNI, resource partitioning, 491
 - VT (virtual terminal), 25
 - vt command, 58, 80–81, 485
- ## W—Z
-
- window command, 453
 - working (W) line, APS, 502
 - X.21 data channels, 158
 - X.25 packets, encapsulation, 278
 - xcnfport command, 920–921
 - xcnfportq command, 987
 - Y-cable redundancy, 28
 - BPX switches, 368
 - versus APS, 509
 - ZCS (Zero Code Suppression) algorithm, 152
