

INDEX

A

- administration costs of IPT deployment, 110**
- applications**
 - call processing, 59
 - customization, 157–160
 - developing, 9–11
 - management and administration, 160
 - user alerts, 157–159
 - voice-activated, 156–157
- assessing current IP network, 125–127**
 - VRA, 128–130
- availability of bandwidth, misconceptions, 141**

B

- bandwidth, availability of, 131–132, 141**
- banking/finance industry**
 - identifying business needs, 95–96
 - ROI, 113
- Baych, Toni, 125**
- benefits of IPT**
 - in secondary schools, 56–57
 - public transportation applications, 57

- business processes**
 - convergence as change agent, 12–14
 - potential effect of IPT, 12
- Bywaters, Ken, 152**

C

- call centers, controlling expenses, 117–118**
- call processing, speed URLs, 60**
- CallManager, 53**
- challenges of IPT deployment**
 - echo, 135
 - lack of bandwidth, 131–132
 - lost calls, 135
 - one-way audio, 134
 - response time, 138–139
 - router utilization, 132–134
 - voice mail quality, 135–137
- client-driven IPT architecture, 55**
- clients, 154**
 - virtual interactive agents, 154
 - Wi-Fi, 155
- commitment to IPT deployment, 147–148**
- comparing**
 - IPT and VoIP, 8
 - PBX and IPT feature sets, 34–35
- components in PBX environment, 20**
- conducting IPT pilot, 139–141**
- connectivity, gateways, 22–24**

consolidation of IPT/PBX market, 162
consultative approach to vendor support, 78
controlling call center expenses, 117–118
convergence, 61–65
 effect on business processes, 12–14
 deploying, 104, 107–108
 incremental deployments, 66–70
 obstacles to, 14–15
customizing applications, 157–160

D

data/voice convergence, 61–64
 incremental deployments, 66–70
 robustness, 65
datacom modules, 4
 drawbacks of, 3
 busy signals, 4
 lack of industry standards, 6
 slow line speeds, 6
demand for new IPT applications, 30–31
deploying IPT
 challenges of
 echo, 135
 lack of bandwidth, 131–132
 lost calls, 135
 one-way audio, 134
 response time, 138–139
 router utilization, 132–134
 voice mail quality, 135–137
 features versus capabilities, 77–78
 impetus for, 72
 in secondary schools, benefits of, 56–57
 need for new applications, 76–77
 banking/finance, 95–96
 health care industry, 93–95
 higher education, 89–91
 hospitality industry, 80–84

K-12 education, 84–88
retail business, 91–93
security applications, 96–97
 rail transportation applications, 57
 reliance on vendor support, 78
 reliance on vital few initiatives, 73
ROI

administration costs, 110
in banking and finance industry, 113
in retail organizations, 114–116
in secondary education, 113–114
maintenance costs, 110–112
network costs, 102–108
 selecting a partner, 122–124
 voice networks
 assessing current IP network, 125–127
 purchasing new components, 128
 VRA, 128–130

developing IPT applications, 9–11

devices, 154

datacom modules, drawbacks of, 3–6
 gateways, 22–24
 IP phones, 9
 network switches, 21
 routers, voice-enabled, 22
 virtual interactive agents, 154
 Wi-Fi, 155

E

EAS (Emergency Alert System), 157
echo, troubleshooting, 135
education, benefits of IPT in secondary schools, 56–57

elements of successful convergence
 commitment, 147–148
 eliminating obstacles, 146
 identifying measurements of
 success, 145
 identifying objectives, 144
 identifying obstacles, 146
 selecting the right partner, 148–149

**eliminating obstacles to IPT
 deployment, 146**

**enterprise-oriented IPT architecture,
 53–54**

evolution of Cisco IP phones, 64–65

extended messaging, 155

external trunks, 20

F

**FAC (forced authorization codes),
 39–44**

**factors affecting voice
 communications, 123–124**

feature sets
 of IPT, training employees, 44–45,
 47–48
 of PBX, 34–35
*forced authorization codes,
 39–44*
linking user profiles, 38
time-of-day ringing, 37

Ficklin, Maurice, 12

finance industry, ROI, 113

flash cut, 44

forced authorization codes, 39–44

future of IPT, 153
 virtual interactive agents, 154
 Wi-Fi, 155

G–H

gateways, 22–24
 VoIP, 7–8

**health care industry, identifying
 business needs, 93, 95**

help entities, 155

**higher education, identifying business
 needs, 89, 91**

**history of IPT, early attempts of
 voice/data integration, 3–6**

**hospitality industry, identifying
 business needs, 80–84**

I

identifying
 business needs
banking/finance, 95–96
health care industry, 93–95
higher education, 89–91
hospitality industry, 80–84
K-12 education, 84–88
retail business, 91–93
 measurements of success, 145
 objectives of IPT deployment, 144
 obstacles to IPT deployment, 146
 vital few initiative through vendor
 consultation, 78–79

**incremental deployment of IPT,
 46–47**

InteLAN, 2

**internal support centers, controlling
 expenses, 117–118**

investing in IPT
 features versus capabilities, 77–78
 impetus for, 72
 need for new applications, 76–77
banking/finance, 95–96
health care industry, 93–95
higher education, 89–91
hospitality industry, 80–84

- K-12 education, 84–88*
- retail business, 91–93*
- security applications, 96–97*
- reliance on vender support, 78
- reliance on vital few initiatives, 73

IP networks, VoIP gateways, 7–8

IP phones, 9

- evolution of, 64–65

IP-Rail, 58

IPT pilot, planning, 139–141

K–L

K-12 education, identifying business needs, 84–88

lack of bandwidth availability, 131–132

line cards, 20

line-side connectivity, 22

linking user profiles, 38

lost calls, 135

M

maintenance costs of IPT deployment, 110, 112

management and administration applications, 160

maximizing ROI, 101

- administration costs, 110
- in banking and finance industry, 113
- in retail deployment, 114–116
- in secondary education deployment, 113–114
- maintenance costs, 110–112
- network costs, 102–103

- convergence deployments, 104, 107–108*

migrating to IPT

- incremental deployments, 66–70
- training, 45–48

misconceptions of IPT

- availability of bandwidth, 141

- necessity of QoS, 142

- necessity of voice expertise, 143

monitoring IPT, user alerts, 27–28, 157–159

N–O

necessity of QoS, misconceptions, 142

NetCom Systems, IP-Rail, 57

network switches, 21

obstacles to convergence, 14–15

one-way audio, 134

open standard IPT architecture, 52

P

paging, 29

PBX environment, 19

- components, 20

- consolidation with IPT, 162

- features sets, 34–35

- forced authorization codes, 39–44*

- linking user profiles, 38*

- time-of-day ringing, 37*

- paging, 29

- proprietary nature of, 26

- replicating on IPT infrastructure, 24–25

- training new IPT users, 35–36

- voice/data integration,

- disadvantages of

- contention, 4*

- lack of industry standards, 6*

- slow line speeds, 6*

performance, VRA, 128–130

piloting an IPT deployment, 139–141

planning an IPT pilot, 139–141

preparing networks for voice deployment, 123
 assessing current IP network,
 125–127
 VRA, 128–130
 factors affecting voice
 communications, 123–124
 purchasing new components, 128
product development for IPT, 10–11
proprietary nature of PBX, 26
public transportation, IPT applications, 57
purchasing new components, 128

Q–R

QoS, necessity of, 142

rail transportation, IPT applications, 57

replicating PBX deployment on IPT infrastructure, 24–25

response time, 138–139

retail organizations
 identifying business needs, 91–93
 ROI, 114–116

retraining PBX users, 35–36

ROI (return on investment), 100–101
 administration costs, 110–112
 in banking and finance
 industry, 113
 in retail deployment, 114–116
 in secondary education
 deployment, 113–114
 network costs, 102–103
 convergence deployments,
 104, 107–108

router utilization, 132–134

routers, voice-enabled, 22

S

schools, identifying business needs, 84–91
 secondary
 benefits of IPT, 56–57
 ROI, 113–114s

security, virus protection in IPT networks, 27–28

security applications, 96–97

selecting deployment partner, 122–124, 148–149

SIP (Session Initiation Protocol), 160–161

speech recognition, voice-activated applications, 156–157

speed URLs, 60

successful convergence, elements of
 commitment, 147–148
 eliminating obstacles, 146
 identifying measurements of
 success, 145
 identifying objectives, 144
 identifying obstacles, 146
 selecting the right partner, 148–149

T

TDM bus, 20

time-of-day ringing, 37

traditional PBX features
 forced authorization codes, 39–44
 linking user profiles, 38
 time-of-day ringing, 37

training new IPT users, 35–48

trunk-side connectivity, 22

U

user alerts, 157–159

user alerts with IPT, 27–28

V

- value propositions, comparing IPT and VoIP, 9**
- vendor support, consultative approach to, 78**
- virtual interactive agents, 154**
- virus protection with IPT, 27–28**
- vital few initiatives, 72**
 - employee productivity, 74
 - identifying through vendor consultation, 78–79
- voice deployments, preparing network for, 123**
 - assessing current IP network, 125–130
 - factors affecting voice communications, 123–124
 - purchasing new components, 128
- voice mail quality, 135–137**
- voice/data convergence, 61–64**
 - datacom modules
 - drawbacks of, 3–4*
 - lack of industry standards, 6*
 - slow line speeds, 6*
 - incremental deployments, 66–70
 - robustness, 65
- voice-activated applications, 156–157**
- voice-enabled routers, 22**
- VoIP (Voice over IP)**
 - gateways, 7–8
 - versus IPT, 8
- VRA (voice readiness assessment), performing, 128–130**

W–Z

- Wi-Fi, 155**
- XML (Extensible Markup Language), phone applications, 64**
