    routing tables, 168–169
        in active mode with DUAL, 441–449
        in passive mode with DUAL, 440

V

variable-length subnet masks. See VLSM
variance command, 454–456
verifying
    BGP-4 attribute configurations, 510–511, 567–570
    EIGRP operations, 462
        debug commands, 465
        show ip eigrp neighbors, 462
        show ip eigrp topology, 463
        show ip eigrp traffic, 464
    filter configuration, 49
    Integrated IS-IS operation, 389–390
    prefix lists configurations, 559–560
    redistribution, 644
        extended ping, 645
        traceroute, 644
virtual links (OSPF)
    configuring, 312
    in multiarea networks, 300, 311
    network topologies, 216
virtual terminal line, 51
VLANs, 89
VLSMs (variable-length subnet masks), 103
    address allocation, 107
    advantages of, 104
        allocating VLSM addresses, 107
        bit allocation, 107
    case studies, 105–107
    example of, 103
    routing protocols, 103
    rules for, 132
    rules of, 104
    static routes, 104
vty (virtual terminal line), 51–52

W-Z

WANs
    assigning IP VLSM subnets, 116–117
    bandwith command and EIGRP, 457
Weight attribute (BGP-4), 503, 564
writing access lists, guidelines for, 48–49
