802.1Q, 73
versus ISL, *74–75*
802.1w. *See* RSTP

A

access links, 378, 599
access lists, xxi
controlling vty access, 446
deny statements, 429
displaying details for all protocols, 433, 440
extended IP, 427, 430, 437
displaying details of, 433, 440
example, 440–442
filtering logic, 439
matching options, 438, 450
functionality of, 427
matching logic, 429–430
named IP, 443–444, 448
permit statements, 429
SAP filter, 478
standard IP, 427
configuring, 432–435
displaying details of, 433, 440
features, 429
matching options, 438, 450
planning, 478
statements, 438–439, 451
wildcard masks, 430–431
access-class command, 433
address classes, 102–103
address violations, switch ports, 585
addresses, 232
IP addresses
displaying, 16, 578
planning, 474
setting, 14, 578
translating for invalid hosts with NAT, 269
IPX addresses
displaying for neighboring routers, 489
secondary addresses, 464, 481
MAC addresses, *583*, *585*
broadcast addresses, 10
dynamic, 582
LAN card addressing, 10
multicast addresses, 10
restricted-static entries, 582
switches, setting permanent, 578
switches, setting restricted, 578
tables, displaying, 16, 578
address-violation command, 578, 585
administrative distance, 176–177
advertisements, VTP, 76
AMI (Alternate Mark Inversion), 335
applying access lists to vty ports, 446
architected field specifications, 309
areas (OSPF), 195, 197
ARP (Address Resolution Protocol), 473
authentication, 313
CHAP, 314–315
PAP, 314–315
autonegotiation, switches, 580
autosummarization, 233–237

B

B8ZS (Binary 8 with Zero Substitution), 335
backup ports, 51
balanced hybrid routing protocols, 178, 575
EIGRP, 198–199
configuring, 209–211
features, 201
loop avoidance, 199–200
bandwidth command, 395
BECN (backward explicit congestion notification), 599
behavior of distance vector routing protocols, 150
binary values, converting to decimal and hexadecimal values, 107–109, 555, 559
blocking state (Spanning Tree), 45, 63
Boolean AND operation, 109–111
identifying subnet number in subnet masks, 116–117
BPDUs (bridge protocol data units), 36, 39, 47
BRI (Basic Rate Interface), 327
DDR, 336–338
bridge IDs, 40
bridge priority, manipulating, 58–60
bridge tables, 11
broadcast addresses
deriving without using binary, 121–127
MAC addresses, 10
broadcast command, 344
broadcast domains, 71
VLANs
configuring, 587–595
ISL trunking, 289–290, 295
VTP, 76–77
broadcasts, Frame Relay handling, 392–393
burst rate, 599

C

calculating number of hosts per subnet, 112–115
Can't Fragment code (Destination Unreachable ICMP message), 279
CBPDUs (Configuration Bridge Protocol Data Units), 39
certification, reseller requirements, x
Challenge Handshake Authentication Protocol (CHAP), 314–317, 535
channel-group command, 61
channels, ISDN, 327
CHAP (Challenge Handshake Authentication Protocol), 314–317, 535
CIDR (classless interdomain routing), 257–259
CIR (committed information rate), 600
circuit-switched WANs, 305
Cisco 2950 switches
basic operation, 16–20
configuring, 14–16, 20–25
port security, 25–27
single switch trunk configuration, 81–88
STP
configuring, 56–57
show commands, 57–58
classes of networks, 102–103
classful routing protocols, 233
autosummarization, configuring, 234–237
classless interdomain routing (CIDR), 257–259
classless routing protocols, 233, 242–244
clock rate command, 307
clock sources, 308
collision domains, 71

commands, 395–396
access-class, 433
address-violation, 578, 585
bandwidth, 395
broadcast, 344
channel-group, 61
clock rate, 307
compress, 310
configure terminal, 580
controller t1, 337
copy nvram tftp, 586–587

show ip arp, 471
show ip interface, 433
show ip interface brief, 466, 473, 481
show ip protocol, 161, 172–173, 202, 210, 469, 473
show ip route, 146–148, 166, 171–173, 471
show isdn, 338
show isdn active, 349
show isdn status, 350
show mac-address-table, 578, 583–584
show running-config, 470, 579
show spantree, 595
show trunk, 594–595
show version, 16, 578, 587
show vlan, 590
show vlan-membership, 588, 595
show vtp, 588, 594
STP-related show commands, 57–58
trace, 281, 471
traffic-share, 161, 209
variance, 161, 176, 209
vlan-membership, 589

vtp, 588–589, 594
vtp trunk pruning-disable, 588
write erase, 587
comparing
link-state and distance vector protocols, 160, 197–198
WAN protocols, 305, 308
components of point-to-point leased lines, 306–307
compress command, 310
configuration files
routers, 587
switches
copying from TFTP servers, 578
copying to TFTP servers, 586
displaying version information, 16, 578
erasing at reload time, 587
managing, 586–587
saving to TFTP servers, 578
updating at reload time, 587
configuration revision number, VTP advertisements, 77
configure terminal command, 580
configuring
CHAP, 315–317, 535
Cisco 2950 switches, 20–27
DDR, dialer profiles, 344, 354, 356–359
default routes with ip default-network command, 240–242
default routing, 239–242
EIGRP, 209–211
extended IP access lists, 437
example, 440–442
Frame Relay, 395–396
fully-meshed, 397–404
hybrid, 410–412
partial-meshed, 404–409
point-to-point subinterfaces, 481
without subinterfaces, 464
HDLC, 310–311
IGRP, 161–164, 204, 210
metrics, 166
IP addresses, 147–148
IPX networks, 479–481
ISDN
authentication, 315
DDR, 336–338
PRI, 352–354
legacy DDR, 339, 345
sample configurations, 345, 348
signaling, 342–344
triggering the dial, 340–342
MAC address table entries, 582, 585
named IP access lists, 443–444, 448
NAT, 269
dynamic NAT, 272–275
static NAT, 270–271
OSFP, 201–202
multiple area configuration, 204–209
single-area configuration, 202–204
PAT, 275–277
RIP, 161–163, 204, 210
debug command output, 168–170
route summarization, 224–232
secondary IP add, 285
standard IP access lists, 432–435
static default routing, 239–240
STP, 56–57
bridge priority, 58–60
EtherChannel, 60–61
port cost, 58–60
switches, 577, 587
as VTP clients/servers, 593
Cisco 2950 switches, 14–16
default settings for 1900 series, 578–579
IP support, 580–582
trunks, 80, 588, 594
VLANs, 587
multiple switch configuration, 591–595
single switch configuration, 588–590
trunking, 79–88
VLSM, 228–229
VTP, 594
contiguous networks, 236
controller t1 command, 337
convergence, 179, 575
of RSTP, 52–55
STP, 43–45, 62
converting decimal-to-hexadecimal-to-binary values, 555, 559
copy nvram tftp command, 586–587
copy running-config startup-config command, 587

copy startup-config tftp command, 586–587
copying switch configuration files from TFTP servers, 578
count to infinity, 154, 167, 179
hold-down timers, 158
creating subnet list charts, 130–136
criteria
for standard access lists, 434–436
for STP forwarding state activation, 38–39, 62

D

data connection process, FTP, 287
data link layer, ISDN specifications, 329, 363
data-link protocols
comparing, 308
configuring, 310–311
error-recovery, 309
for point-to-point leased lines, 307–308
PPP
error detection, 312
looped link detection, 312
LCP, 311
LQM, 313
magic numbers, 313
Protocol Type field, 309
DCE (data communications equipment), 376
DDR (Dial On-Demand Routing)
configuring over ISDN BRI, 336–338
dialer profiles, configuring, 338–339, 354–359
dialer watch, 338
dialing, 344
legacy configuration, 339
connection termination, 345
sample configurations, 345, 348
signaling, 342–344
triggering the dial, 340–342
DE (discard eligibility), 601
dead interval, 194
debug command, output, 168, 170
debug dialer command, 338
debug dialer events command, 350
debug dialer packets command, 351
debug ip igrp event command, 172–173
debug ip igrp transaction command, 171–173, 473
debug ip igrp transactions command, 466
debug ip rip command, 161, 168, 202, 210
debug isdn q921 command, 338
debug isdn q931 command, 338, 350
decimal values, converting to hexadecimal and binary values, 555–559
default port costs, STP, 42, 62
default routes, configuring, 240–242
delete nvram command, 587
delete vtp command, 80, 588
deny statements (access lists), 429
deploying
Frame Relay networks
configuring, 464–466
planning phase, 462–463
verify, 466–473
IPX networks
configuring, 479–481
planning phase, 474–478
verifying configuration, 481–490
deriving subnet numbers without binary conversion, 121–127
designated ports, 39–41
Destination Unreachable messages, 277–280, 295
devices, TE2, 332
dialer fast-idle command, 337, 345
dialer groups (ISDN), enabling, 337
dialer idle-timeout command, 345
dialer load-threshold command, 361
dialer profiles, configuring, 338–339, 354–359
dialer string command, 343
dialer watch, 338
dialer-group command, 337, 342
dialer-list command, 337
Dijkstra SPF algorithm, 178, 575
directed broadcast address, identifying, 118–119
directly connected routes, routing table updates, 151
directly connected subnets, 150
discontiguous networks, 236
distance vector routing protocols, 153, 567
administrative distance, 176–177
autosummarization, 236
comparing, 160
equal-cost routes, 173–176

IGRP
configuring, 161–164, 204, 210
metrics, 166
loop avoidance, 153, 179
count to infinity, 154, 179
hold-down timers, 158–159
poison reverse, 157
route poisoning, 154
split horizon, 155–157
triggered updates, 160
RIP
configuring, 161–163, 204, 210
debug command output, 168, 170
hop count, 152–153
migration to IGRP, 170–173
route aggregation, 236
routing behavior, 150
routing tables, 151, 198, 213
DLCI (data-link connection identifier), 378, 383–387, 602
global addressing, 385–387
local addressing, 384
DTE (data terminal equipment), 376
DUAL (Diffusing Update Algorithm), 179, 575
dynamic MAC addresses, 582
dynamic NAT, 264–265
configuring, 272–275

E

Echo ICMP message, 277–278, 295
Echo Request/Reply messages, 278
edges, 50
EIGRP (Enhanced IGRP), 198–199
configuring, 209–211
features of, 201
loop avoidance, 199–200
electing root bridge (STP), 40–41
encapsulation, IPX, 464
encapsulation command, 290, 310
encapsulation frame-relay command, 395–396, 398
encapsulation hdlc command, 311
equal-cost routes, 173, 175–176
erase startup-config command, 587
error detection, 312
error recovery, WAN protocols, 309
E-series ISDN protocols, 328
ESF (Extended Super Frame), 336
EtherChannel, 47
configuring, 60–61
Ethernet edges, 50
extended IP access lists, 427, 430, 437
example, 440–442
filtering logic, 439
matching options, 438, 450
exterior routing protocols, 178, 575

F

FCS (frame check sequence), 309
features of EIGRP, 201
FECN (forward explicit congestion notification), 603
filtering packets
extended IP access lists, 437
example, 440–442
named IP access lists, 443–444, 448
standard access lists, 427
configuring, 433–435
features, 429
matching logic, 429–430
wildcard masks, 430–431
filtering process of switches, 11
flash updates, 160
Forward Delay Timer, STP, 43
forwarding, 36, 47
unknown unicast frames on switches, 13
forwarding process of switches, 11
forwarding state (STP), 38–39, 45, 62–63
lowest-cost hello, calculating, 41
fragmentation, 288
Frame Relay, xxii, 376
broadcast handling, 392–393
configuring, 395–396
fully-meshed, 397–404
hybrid, 410–412
partial-meshed, 404–409
point-to-point subinterfaces, 481
without subinterfaces, 464
DLCI, 383–387

Layer 2 address mappings, 399–404
Layer 3 address mappings, 388–391, 415
LMI, 381–383
maps, static, 464
network deployment
planning, 462–463
verification, 466–473
partial-mesh, configuring, 404–409
Protocol Type field, lack of, 383
VCs, 377–381
frame-relay interface-dlci command, 396
frame-relay lmi-type command, 395
framing, 307, 335–336
framing sf command, 338
FRF.5, 394
FRF.8, 394
FTP (File Transfer Protocol), 286–287
data connection process, 287
FTP control connections, 286
fully-meshed Frame Relay networks, 380
configuring, 397–404
function groups, ISDN, 331, 333–334

G

gateway of last resort, 240
gateways, default, 14, 578
global addressing, 385, 387
group addresses, 10

H

half-duplex switch ports, 580, 582
HDB3 (High-Density Bipolar 3), 335
HDLC (High-Level Data Link Control), configuring, 310–311
hello BPDUs, 40
Hello packets (OSPF), 193
Hello timer, STP, 43
hexadecimal values, converting to decimal and binary values, 555–559
hold-down timers, 154, 158–159, 179
home-based ISDN, 334
hop count, 152–153
Host Unreachable code (Destination Unreachable ICMP message), 279
hybrid Frame Relay networks, configuring, 410–412

I-J

ICMP (Internet Control Message Protocol) messages
Destination Unreachable, 277–280, 295
Echo, 277–278, 295
