## Acknowledgments

Chad Chelius for jumping in and helping us to fully update and tech edit this edition. We could not have completed this without him!

Nancy Aldrich-Ruenzel has enthusiastically supported our projects since her tenure began as the publisher of Peachpit Press.

Susan Rimerman, our editor, keeps the many wheels in motion for us at Peachpit.

Lisa Brazieal, production editor, did an expert job of preparing our files for printing by RR Donnelley.

Among the other staff members at Peachpit Press who contribute their talents on an ongoing basis are Nancy Davis, editor in chief; Sara Todd, marketing manager; and Alison Serafini, contracts manager.

Elaine Soares, photo research manager, and Lee Scher, photo research coordinator, both of the Image Resource Center at Pearson Education (the parent company of Peachpit Press), quickly procured the stock graphics from Shutterstock.com that we requested.

Chris Lyons, Adobe Illustrator maestro, graciously allowed us to reproduce his artwork on several pages of this book (visit [chrislyonsillustration.com](http://chrislyonsillustration.com)).

We package our own books, which means that in addition to writing and testing the text and creating the illustrations, we design and produce press-ready InDesign files. To help us finish this title, Steve Rath generated a comprehensive index, and Scout Festa did a meticulous job of proofreading.

We commend the Illustrator CC prerelease team for producing a great product and for welcoming user input via the beta forum.

Recently, we moved our household and offices from the coast of New England to the mountains of Asheville, North Carolina. We are grateful to our friends and family who have encouraged and supported us in this journey.

Elaine Weinmann and Peter Lourekas

In this table of contents and throughout this book, new or improved **Illustrator CC** features are identified by red stars.★

## Contents

### 1 Create & Save Files

Launching Illustrator . . . . .	1
Creating a new document . . . . .	2
Using templates. . . . .	4
Adding artboards to a document ★ . . . . .	7
Deleting artboards . . . . .	9
Modifying artboards ★ . . . . .	10
Aligning and rearranging artboards . . . . .	11
Choosing artboard options. . . . .	12
Saving a document in the Adobe Illustrator (.ai) format . . . . .	13
Ending a work session. . . . .	14

### 2 Manage color

Introduction to color management . . . . .	15
Choosing color settings for Illustrator . . . . .	17
Synchronizing the color settings. . . . .	20
Changing the document profile. . . . .	21
Proofing a document onscreen . . . . .	22

### 3 Workspaces

The Hello screen . . . . .	23
Features of the Illustrator workspace. . . . .	23
Using tabbed document windows . . . . .	25
Arranging document windows. . . . .	26
Changing the zoom level. . . . .	27
Moving an area of a document into view . . . . .	28
Fitting an artboard in the document window. . . . .	28
Changing the screen mode. . . . .	29
Switching document views. . . . .	30
Creating custom views . . . . .	31
Configuring the panel groups and docks. . . . .	32
Choosing, saving, managing, and resetting workspaces . . . . .	34

### 4 Panels

The Illustrator panels that are used in this book . . . . .	37
Creating custom tools panels ★ . . . . .	42

### 5 Bridge

Opening files from Illustrator . . . . .	55
Launching Adobe Bridge . . . . .	56
Features of the Bridge window . . . . .	56
Choosing a workspace for Bridge ★ . . . . .	58
Previewing graphics in Bridge. . . . .	60
Opening files from Bridge ★ . . . . .	62
Customizing the Bridge window . . . . .	64

Saving custom workspaces. . . . .	66
Resetting the Bridge workspace . . . . .	66
Using thumbnail stacks. . . . .	67
Searching for files . . . . .	68
Creating and using collections . . . . .	69
Rating and labeling thumbnails . . . . .	71
Filtering the display of thumbnails . . . . .	72
Choosing a sorting order for thumbnails. . . . .	72
Assigning keywords to files . . . . .	73
Exporting the Bridge cache . . . . .	74
Managing files via Bridge. . . . .	74

### 6 Geometric objects

Selecting and deleting objects . . . . .	75
Creating rectangles and ellipses . . . . .	76
Reshaping a path using Live Corners and Live Shapes ★ . . . . .	78
Creating polygons . . . . .	80
Creating stars . . . . .	81
Creating line segments . . . . .	83
Creating spirals . . . . .	84
Creating pixel-perfect artwork for the Web . . . . .	84

### 7 Freehand Drawing

A quick color primer . . . . .	85
Drawing with the Pencil tool ★ . . . . .	86
Drawing with the Paintbrush tool ★ . . . . .	87
Choosing options for the Pencil and Paintbrush tools . . . . .	88
Using the Blob Brush tool ★ . . . . .	89

### 8 Select

The five selection tools . . . . .	91
Using the Selection tool . . . . .	93
Using the Direct Selection tool. . . . .	94
Selecting objects via a command . . . . .	94
Selecting objects via the Layers panel . . . . .	95
Working with groups. . . . .	96
Isolating individual objects . . . . .	98
Using the Lasso tool. . . . .	98
Using the Magic Wand tool. . . . .	99
Saving selections . . . . .	100
Selecting and deselecting all objects. . . . .	100

### 9 Move, Copy & Align

Moving objects ★ . . . . .	101
Aligning objects with the help of Smart Guides . . . . .	102
Copying objects . . . . .	104

Aligning and distributing objects via buttons . . . . .	107
Creating ruler guides ★ . . . . .	109
Creating guides from objects . . . . .	110
Locking and unlocking guides . . . . .	111
Clearing guides . . . . .	111
Using the grid . . . . .	112
<b>10 Fill &amp; Stroke</b>	
Using color in Illustrator . . . . .	113
Colors for your output medium . . . . .	114
Using the basic color controls . . . . .	116
Saving colors as swatches ★ . . . . .	118
Choosing colors via the Color panel . . . . .	119
Applying colors from a library . . . . .	120
Changing the tint percentage ★ . . . . .	121
Changing the stroke weight, alignment, caps, and joins . . . . .	122
Creating arrows . . . . .	123
Creating a dashed stroke . . . . .	124
Using the Eyedropper tool . . . . .	125
Using the Swatches panel ★ . . . . .	126
Using the Color Guide panel . . . . .	130
Using Kuler ★ . . . . .	133
Replacing colors in your artwork . . . . .	136
Inverting colors . . . . .	137
Colorizing grayscale images . . . . .	137
Blending fill colors . . . . .	138
Creating a pattern . . . . .	139
Editing a pattern . . . . .	144
<b>11 Transform</b>	
Transforming an object via its bounding box . . . . .	147
Using the Free Transform tool . . . . .	148
Using the Scale, Rotate, Shear, and Reflect tools . . . . .	150
Using the Transform and Control panels . . . . .	152
Using the Transform Each command . . . . .	154
Using the Transform effect . . . . .	155
Repeating a transformation . . . . .	156
<b>12 Reshape</b>	
The building blocks of a path . . . . .	157
Moving points and segments . . . . .	158
Reshaping curves . . . . .	158
Converting points . . . . .	159
Adding points . . . . .	161
Deleting points . . . . .	164
Reshaping objects with the Pencil or Paintbrush tool . . . . .	164
Reshaping segments ★ . . . . .	165
Applying a variable width profile preset to an object's stroke . . . . .	166
Changing an object's stroke width using the Width tool . . . . .	167
Reshaping objects with the Blob Brush tool . . . . .	170
EXERCISE: Draw and reshape objects in a freehand style . . . . .	171
Using the Reshape tool . . . . .	172
EXERCISE: Create a brush with the Reshape tool . . . . .	172
Erasing sections of objects . . . . .	173
Aligning points . . . . .	174
Joining endpoints . . . . .	175
Reshaping objects using commands . . . . .	176
Slicing and dicing . . . . .	178
EXERCISE: Draw a glass of beer (or cream soda!) . . . . .	180
<b>13 Layers</b>	
Getting to know the Layers panel . . . . .	181
Creating layers . . . . .	183
Deleting layers and objects . . . . .	185
Selecting listings on the Layers panel . . . . .	186
Selecting objects via the Layers panel . . . . .	188
Restacking layers and objects . . . . .	191
Duplicating layers and objects . . . . .	192
Locking layers and objects . . . . .	193
Hiding layers and objects . . . . .	194
Collecting objects into a new layer . . . . .	195
Releasing objects to layers . . . . .	196
Merging layers and groups . . . . .	197
Flattening layers . . . . .	198
<b>14 Appearances</b>	
Applying appearance attributes . . . . .	200
Editing appearance attributes . . . . .	204
Hiding and deleting appearance attributes . . . . .	205
Copying appearance attributes . . . . .	206
Expanding appearance attributes . . . . .	206
<b>15 Effects</b>	
Applying Illustrator effects . . . . .	207
Editing, duplicating, and deleting effects . . . . .	210
A few Illustrator effects up close . . . . .	211
Rasterizing objects . . . . .	216
Applying Photoshop effects via the Effect Gallery . . . . .	217
<b>16 Graphic Styles</b>	
Graphic styles basics . . . . .	219
Loading graphic styles from a library . . . . .	221
Applying graphic styles . . . . .	222

Removing a graphic style from an object . . . . .	223	Using the Touch Type tool . . . . .	287
Applying multiple graphic styles to an object . . . . .	224	Hanging punctuation . . . . .	288
Creating graphic styles . . . . .	225	Setting tabs . . . . .	288
Redefining graphic styles. . . . .	226	Changing the baseline shift value . . . . .	290
Deleting graphic styles from the panel. . . . .	227	Creating type outlines. . . . .	291
Creating a custom graphic styles library . . . . .	228	Wrapping type around an object . . . . .	292
Breaking the link to a graphic style. . . . .	228	EXERCISE: Create a shadow for point type. . . . .	293
<b>17 Image Trace</b>		Applying appearance attributes to type . . . . .	294
Tracing a raster image using a preset. . . . .	229	EXERCISE: Add multiple strokes to a character. . . . .	295
Applying custom tracing settings . . . . .	232	EXERCISE: Use the Free Distort effect on type . . . . .	296
Expanding a tracing into paths. . . . .	237	Dealing with missing fonts ★ . . . . .	297
<b>18 Live Paint</b>		Dealing with missing Typekit fonts . . . . .	298
Creating a Live Paint group . . . . .	240	<b>21 Pen Tools</b>	
Using the Live Paint Bucket tool. . . . .	241	Drawing with the Pen tool ★ . . . . .	299
Using the Live Paint Selection tool . . . . .	244	Converting anchor points on paths ★ . . . . .	303
Reshaping a Live Paint group . . . . .	246	EXERCISE: Draw a knife with the Pen tool. . . . .	305
Adding new faces and edges to a Live Paint group . . . . .	247	<b>22 Acquire Images</b>	
Choosing gap options for a Live Paint group . . . . .	248	How images are acquired in Illustrator. . . . .	307
Expanding and releasing Live Paint groups . . . . .	249	Using the Open command . . . . .	308
<b>19 Create Type</b>		Using the Place command . . . . .	309
The type tools . . . . .	251	Importing Photoshop images into Illustrator . . . . .	312
Choosing a font and font size for a type tool ★ . . . . .	252	Managing linked images . . . . .	314
Creating point type . . . . .	252	Embedding and unembedding images . . . . .	317
Creating area type ★ . . . . .	253	Dragging and dropping images into Illustrator . . . . .	318
Creating path type . . . . .	256	<b>23 Brushes</b>	
Copying or moving type characters . . . . .	258	Applying brushes to existing paths . . . . .	320
Importing text into Illustrator ★ . . . . .	259	Using the Brushes panel . . . . .	321
Threading type objects . . . . .	260	Removing brush strokes from objects. . . . .	322
Converting point type to area type, and vice versa. . . . .	262	Expanding brush strokes . . . . .	323
Rotating type . . . . .	264	Creating and editing Calligraphic brushes. . . . .	324
EXERCISE: Putting type on a circle . . . . .	265	Creating and editing Scatter brushes . . . . .	326
<b>20 Style &amp; Edit Type</b>		Creating and editing Art brushes. . . . .	328
Selecting type . . . . .	267	Creating and editing Bristle brushes . . . . .	331
Changing the font family and style . . . . .	269	Creating and editing Pattern brushes. . . . .	334
Working with Typekit fonts ★ . . . . .	272	Painting brush strokes inside objects. . . . .	338
Changing the font size . . . . .	274	Duplicating brushes . . . . .	339
Changing the leading value . . . . .	275	Editing a brush manually. . . . .	340
Applying kerning and tracking . . . . .	276	Editing brush strokes on objects. . . . .	341
Using smart punctuation . . . . .	278	Deleting brushes . . . . .	342
Inserting alternate glyphs . . . . .	279	Creating a custom brush library . . . . .	342
Applying hyphenation. . . . .	281	<b>24 Gradients</b>	
Changing paragraph alignment. . . . .	282	Applying a gradient to an object's fill or stroke . . . . .	343
Changing paragraph indentation. . . . .	283	Creating a two-color gradient. . . . .	348
Changing inter-paragraph spacing. . . . .	283	Editing gradient colors via on-object controls ★ . . . . .	349
Using paragraph and character styles. . . . .	284	Saving a gradient as a swatch . . . . .	350

- Changing the position, length, or angle of a gradient in an object . . . . . 351
- Spreading a single gradient across multiple objects . . . 353
- Expanding a gradient into paths . . . . . 354

## 25 Combine paths

- Using the Shape Builder tool . . . . . 355
- Applying the Shape Mode commands . . . . . 359
- Applying the Pathfinder commands . . . . . 362
- Using the Compound Path command . . . . . 365
- Working with compound paths . . . . . 366
- Applying Pathfinder effects . . . . . 368

## 26 Clipping Masks

- Creating a clipping set . . . . . 369
- Selecting objects in a clipping set . . . . . 373
- Adding objects to, and deleting them from, a clipping set . . . . . 375
- Releasing a clipping set . . . . . 376

## 27 Transparency

- Changing an object's opacity or blending mode ★ . . . 377
- Controlling which objects the transparency settings affect . . . . . 380
- Creating an opacity mask . . . . . 382
- Editing masked artwork or the masking object in an opacity mask . . . . . 383

## 28 Symbols

- Accessing the symbol libraries . . . . . 386
- Creating individual symbol instances . . . . . 387
- Creating symbol sets with the Symbol Sprayer tool . . . 388
- Replacing symbols in a document . . . . . 389
- Creating symbols . . . . . 390
- Deleting symbols from the panel . . . . . 390
- Creating a custom symbol library . . . . . 391
- Editing symbols . . . . . 391
- Choosing options for the symbolism tools . . . . . 392
- Using the Symbol Shifter, Scruncher, Sizer, Spinner, Stainer, Screener, and Styler tools . . . . . 393
- Unlinking symbol instances . . . . . 397
- Expanding symbol instances . . . . . 398

## 29 Live Color

- Creating color groups via the Recolor Artwork dialog . . 399
- Using the color wheel in the Recolor Artwork dialog . . 401
- Assigning colors to artwork via the Recolor Artwork dialog . . . . . 403
- Reducing colors via the Recolor Artwork dialog . . . . . 405

## 30 Preferences

- Opening the Preferences dialog . . . . . 407
- General Preferences ★ . . . . . 408
- Sync Settings Preferences . . . . . 410
- Selection & Anchor Display Preferences ★ . . . . . 411
- Type Preferences ★ . . . . . 412
- Units Preferences . . . . . 413
- Guides & Grid Preferences . . . . . 414
- Smart Guides Preferences . . . . . 415
- Slices Preferences . . . . . 416
- Hyphenation Preferences . . . . . 416
- Plug-ins & Scratch Disks Preferences . . . . . 417
- User Interface Preferences . . . . . 418
- File Handling & Clipboard Preferences ★ . . . . . 419
- Appearance of Black Preferences . . . . . 420

## 31 Print & Export

- Print dialog: General options . . . . . 422
- Marks and Bleed options . . . . . 424
- Output options . . . . . 426
- Graphics options . . . . . 428
- Color Management options . . . . . 430
- Advanced options . . . . . 431
- Summary options . . . . . 431
- Using the Separations Preview panel . . . . . 432
- Printing and exporting semitransparent objects . . . . 434
- Creating and editing presets . . . . . 437
- Producing crop and trim marks . . . . . 438
- Choosing a resolution for effects . . . . . 439
- Packaging files for output . . . . . 440
- Choosing a file format for export . . . . . 442
- Saving files in the Adobe PDF format . . . . . 442
- Using the Export command . . . . . 446
- Using the Document Info panel . . . . . 447
- Optimizing files for the Web . . . . . 448
- Exporting artwork as CSS code . . . . . 452
- Exporting Illustrator files to Adobe Photoshop . . . . . 454

## Appendix

- Syncing Illustrator settings via Creative Cloud . . . . . 455
- Importing and exporting Illustrator settings . . . . . 456
- Sharing your artwork on Behance ★ . . . . . 458

- Index** . . . . . 459

### REGISTER THIS BOOK, THEN DOWNLOAD GRAPHICS FOR FREE!

Purchasing this book entitles you to more than just a couple of pounds of paper. If you register the book with Peachpit Press, you will also be entitled to download copies of many of the graphics that are used throughout the book, which you can use to practice with as you follow our step-by-step tutorials.

To access the bonus graphics, log into your Peachpit account or create one at [Peachpit.com/join](http://Peachpit.com/join) (it's free). On your Account page (under the Registered Products tab), click [Register Your Products Here](#) or [Register Another Product](#), enter the ISBN number for this book: **0133987035**, then click Submit. Finally, below the title of this book, click the [Access Bonus Content](#) link.

Note: The downloadable graphics that we have made available are copyrighted by their owners, and they have been watermarked to discourage unauthorized reproduction. They are for your personal use only — not for distribution or publication.

### NOTE TO OUR READERS

Before going to press with this book, we tested (and retested) our text to ensure that it accurately describes the options and features we viewed in the prerelease version of Illustrator CC (2014 release). Due to the nature of the Creative Cloud, however, some features may change or update at a later date. If there are any significant changes to Illustrator, we will post an addendum in the [Access Bonus Content](#) link below this book title at [Peachpit.com](http://Peachpit.com), so be sure to register the book (see the directions above). Also, we may post supplemental information about Illustrator on our blog at [elaineandpeter.com](http://elaineandpeter.com).

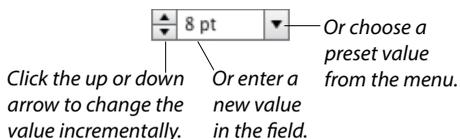

This chapter will help you become more intimately acquainted with the Illustrator interface features that you will be using continually as you work: the panels. In the preceding chapter, you learned how to arrange them onscreen. Here you will see what the individual panels look like and be briefly introduced to their specific functions—from choosing color swatches (Swatches panel) to switching among artboards (Artboards panel) to editing layers (Layers panel). Note: In-depth instructions for using specific panels are amply provided throughout this book.

## The Illustrator panels that are used in this book\*

You can read through this chapter with or without glancing at or fiddling with the panels onscreen, and also use it as a reference guide as you work. Panel icons are shown on the next page. Following that, you'll find instructions for using the Tools panel, a brief description of each tool, an introduction to the Control panel, then a description and illustration of all the other Illustrator panels that are used in this book (in alphabetical order). Note: To open a panel that isn't already in a dock, choose the panel name from the Window menu.

### CHOOSING VALUES IN A PANEL OR DIALOG

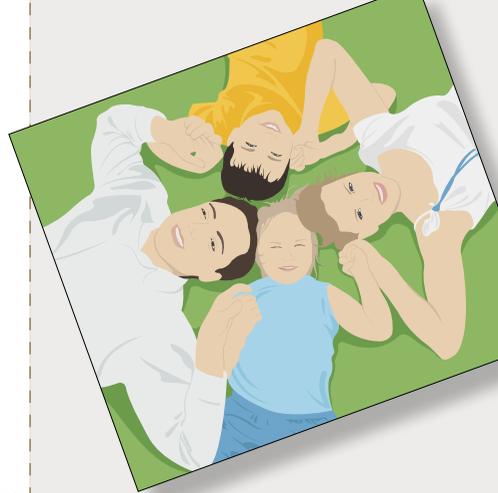

To change a value incrementally, click in a field in a panel or dialog, then press the up or down arrow key on the keyboard.

### SHORTCUTS FOR ENTERING VALUES IN ILLUSTRATOR PANELS

Apply a value and highlight the next field	Tab
Apply a value and highlight the previous field	Shift-Tab
Apply a value and exit the panel	Return/ Enter

\*The Actions, SVG Interactivity, and Variables panels aren't covered in this book.

# PANELS

# 4

## IN THIS CHAPTER

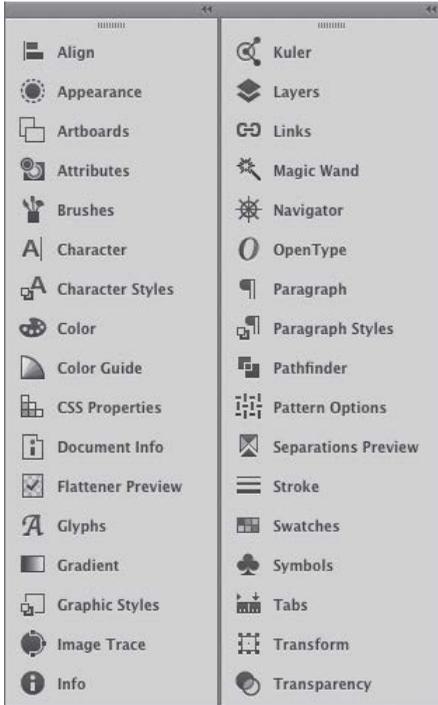

---

The Illustrator panels that are used in this book . . . . .	37
Creating custom tools panels . . . . .	42

---

## Identifying the panel icons

Each panel in Illustrator has a unique icon. **A** If you keep the panels collapsed to conserve screen space, you can identify them by their icons. If you don't recognize a panel icon, use the tool tip to identify it.

**A** When collapsed, each panel has a unique icon.

### OPENING THE PANELS FOR EDITING TYPE

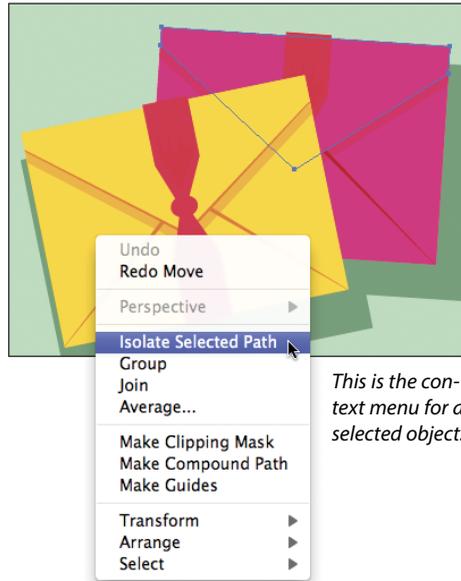

Illustrator provides seven panels for editing type: Character, Character Styles, Glyphs, OpenType, Paragraph, Paragraph Styles, and Tabs. All of them can be opened via the Window > Type submenu; the Glyphs panel can also be opened via the Type menu. Four of them can also be opened via a shortcut, as listed below.

	Mac OS	Windows
Character	Cmd-T	Ctrl-T
OpenType	Cmd-Option-Shift-T	Ctrl-Alt-Shift-T
Paragraph	Cmd-Option-T	Ctrl-Alt-T
Tabs	Cmd-Shift-T	Ctrl-Shift-T

### USING THE CONTEXT MENU

When you **right-click** in the document, depending on where you click and which tool happens to be selected, a menu of context-sensitive commands pops up onscreen. If a command is available on a context menu (or can be executed quickly via a keyboard shortcut), we let you know in our instructions, to spare you a trip to the main menu bar.

Note to Mac OS users: If your mouse doesn't have a right-click button, hold down Control and click to open the context menu.

### HIDING AND SHOWING PANELS AND TOOLS

Hide or show all the currently open panels, including the Tools panel and tearoff toolbars	Tab
Hide or show all the currently open panels but not the Tools panel or tearoff toolbars	Shift-Tab

## Using the Tools panel

In addition to the tools on the Tools panel, which are used for creating and editing objects, you will also find color controls, a menu or icons for choosing a drawing mode, and a menu for choosing a screen mode. If the panel is hidden, choose Window > Tools to display it. To convert the panel layout from single column to double column or vice versa, either click the double arrowhead at the top or double-click the top bar.

Click once on a visible tool to select it, or click and hold on a tool that has a tiny arrowhead to choose a related tool from a fly-out menu. You can cycle through tools on the same menu by Option/Alt clicking the visible tool.

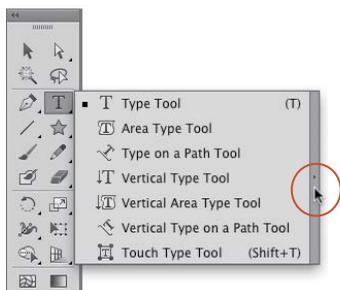

To create a tearoff toolbar for a group of related tools, press and hold on the arrowhead for a tool, then click the vertical tearoff bar on the right edge of the menu. **A–B** To dock tearoff toolbars together, drag one tearoff toolbar to the side of an existing one and release when the vertical drop zone line displays. **C–D** To make a tearoff toolbar vertical instead of horizontal, click the double-arrow **E–F** or double-click the top bar. To close a docked tearoff toolbar, drag it by its gripper bar out of its dock, then click its close button (x).

To access a tool quickly, use the letter shortcut that is assigned to it. The shortcuts are listed in parentheses on the next two pages, and also in the tool tips onscreen. **G** (Note: If the tool tips aren't displaying, go to Illustrator/Edit > Preferences > General and check Show Tool Tips.)

Some tools can also be accessed temporarily via a toggle key. For example, pressing Cmd/Ctrl turns the current tool into a temporary selection tool. You'll learn many tool toggles as you proceed through this book.

To turn the tool pointer into a crosshairs icon for more precise positioning, go to Illustrator/Edit > Preferences > General and check Use Precise Cursors. Or if you prefer to keep that preference off, you can turn the pointer to a crosshairs icon temporarily by pressing the Caps Lock key.

You can choose options for the current tool from the Control panel (see page 43). Some tools, such as the Paintbrush and Pencil tools, have a related options dialog, which opens when you double-click the tool or when you click the tool and then press Return/Enter.

**A** We're creating a tearoff toolbar.

**B** Tearoff toolbars can be moved anywhere onscreen.

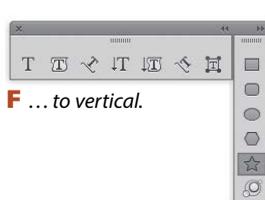

**C** We're docking a second tearoff toolbar to the first one.

**D** The two tearoff toolbars are docked together.

**E** We're clicking the double arrow on a tearoff toolbar to switch its orientation from horizontal ...

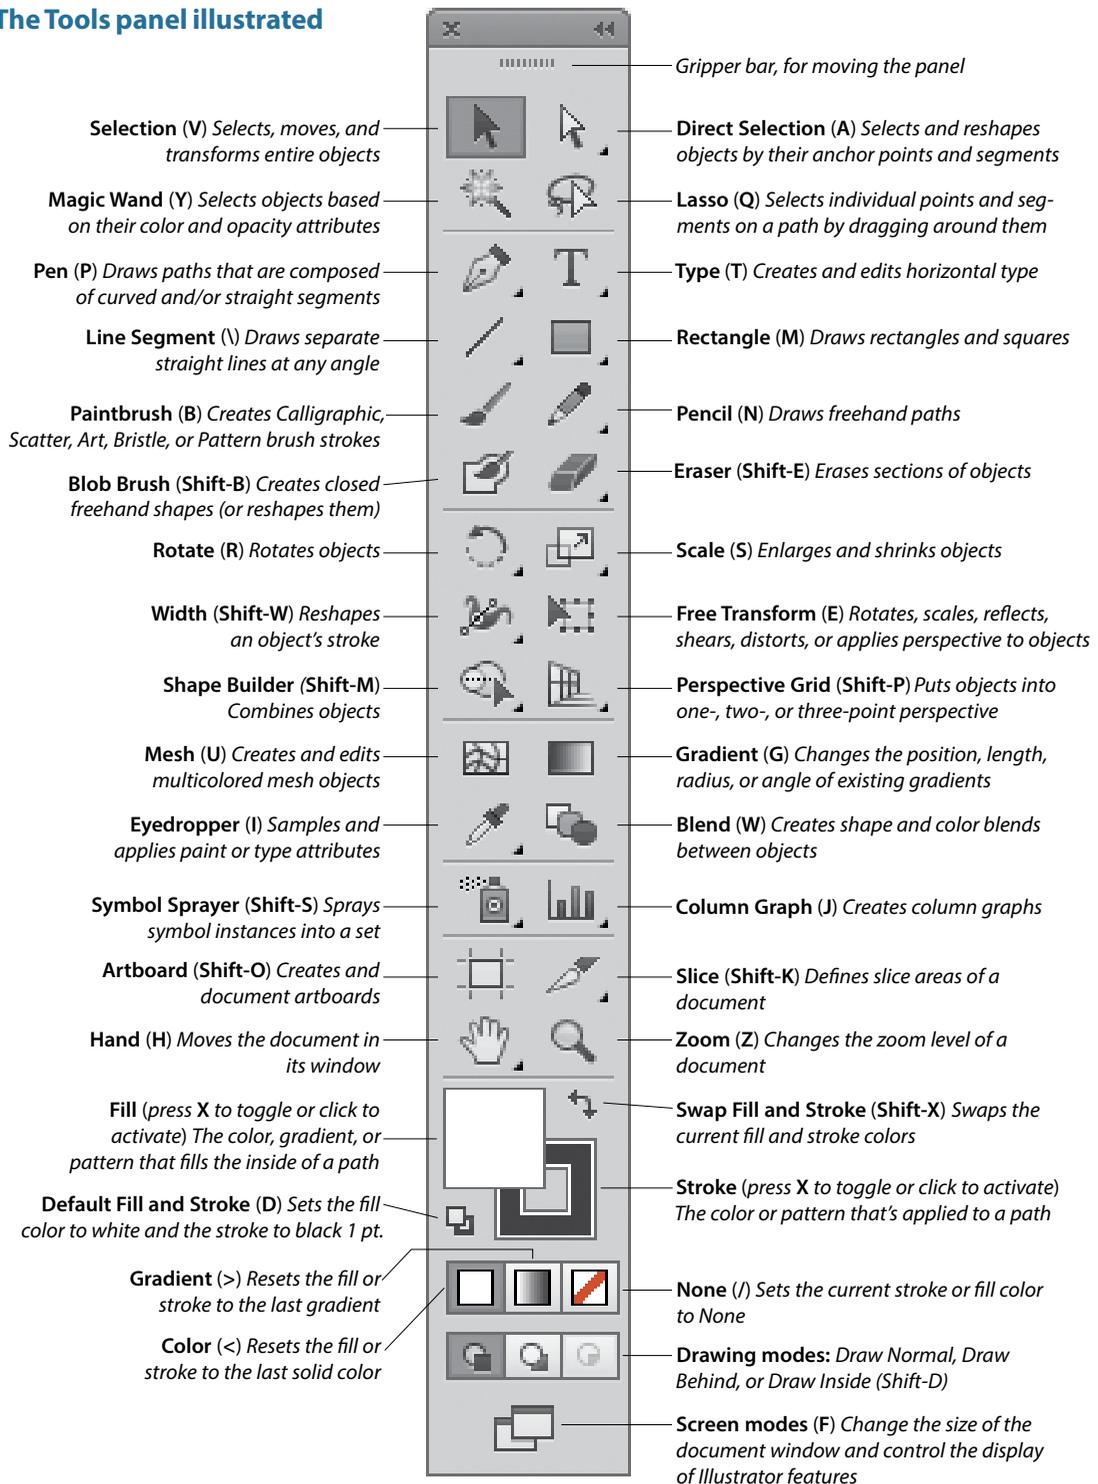

**F** ... to vertical.

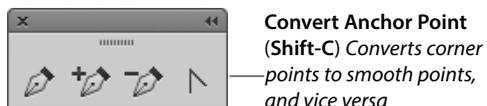

**G** Via the tool tip, you can identify a tool and learn its shortcut.

## The Tools panel illustrated

## The tearoff toolbars\*

**Add Anchor Point (+)** **Delete Anchor Point (-)**

**Convert Anchor Point (Shift-C)** Converts corner points to smooth points, and vice versa

**Arc** Creates curve segments **Spiral** Creates spiral lines **Rectangular Grid** Creates rectangular grids

**Polar Grid** Creates circular grids

**Reflect (O)** Creates a mirror reflection of an object

### LIQUIFY TOOLS (apply distortion)

**Warp (Shift-R)** Distorts objects **Twirl** **Pucker** **Bloat** **Scallop** **Wrinkle**

**Live Paint Selection (Shift-L)** Selects sections of a Live Paint group

**Live Paint Bucket (K)** Recolors faces and edges in a Live Paint group

**Measure** Measures the distance between two points

### SYMBOLISM TOOLS (edit symbol instances)

**Symbol Shifter** **Symbol Scruncher** **Symbol Sizer** **Symbol Spinner** **Symbol Stainer** **Symbol Screener**

**Symbol Styler**

**Print Tiling** Positions the printable page

**Group Selection** Selects whole groups (and nested groups)

**Area Type** Creates and edits type horizontally inside an object

**Vertical Area Type** Creates and edits type vertically inside an object

**Touch Type (Shift-T)** Scales, rotates, and shifts characters manually

**Type on a Path** Creates and edits type horizontally along a path

**Vertical Type** Creates and edits vertical type

**Vertical Type on a Path** Creates and edits type vertically along a path

**Rounded Rectangle**

**Ellipse (L)**

**Polygon**

**Star**

**Flare** Creates drawings of lens flares

**Path Eraser** Erases sections of paths

**Smooth** Smooths path segments

**Knife** Carves up paths

**Scissors (C)** Splits paths

**Reshape** Reshapes sections of paths

**Shear** Skews objects

**Slice Selection** Selects slices, for Web output

\*The tearoff toolbars for the Perspective Grid and Graph tools aren't illustrated here.

## Creating custom tools panels

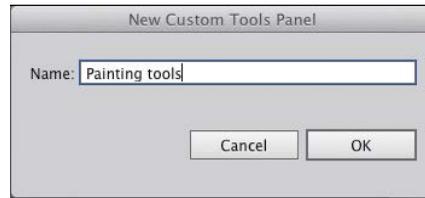

To conserve space on your screen and for more efficient editing, you can create separate, custom tools panels in which you store just the tools that you use for specific kinds of tasks. For example, you could create separate panels for drawing tools, reshaping tools, or tools for creating gradients and blends. You can open any custom tools panel from the Window > Tools submenu.

### To create a custom tools panel: ★

1. Choose Window > Tools > **New Custom Tools Panel**.
2. In the dialog, enter a name for your tools panel, **A** then click OK. A new panel appears onscreen. **B**  
Note: All custom tools panels contain a Fill square and a Stroke square, which cannot be deleted.
3. To add tools to your custom panel, drag any tool individually from the standard Tools panel into the tools (top) area of your panel (plus sign pointer). **C**
  - ▶ To copy a tool that is in a group but isn't currently visible on the Tools panel, select the tool first to make it the topmost tool. To quickly cycle through the tools within the current group, hold down Option/Alt and click the topmost tool. Or if you prefer to display all the tools in a group on a separate tearoff toolbar, press and hold on the arrowhead for a tool to open its menu, release, then click the vertical tearoff bar on the right edge of the menu.
4. To delete a tool from the custom panel, drag it out of the panel (a minus sign appears in the pointer).
5. To relocate a tool within a custom panel, drag it to the desired slot, then release it when the vertical drop zone bar appears.

### To rename, copy, or delete a custom tools panel: ★

1. Choose Window > **Manage Tools Panel**.
2. The Manage Tools Panel dialog opens. **D** Click the name of the panel that you want to rename, copy, or delete.
3. Do one of the following:
  - To rename the panel, change the name in the field, then click OK.
  - To duplicate the panel, click the New Custom Tools panel button,  type the desired name, then click OK.
  - To delete the panel, click Delete.

**A** We're entering a name for a new custom tools panel.

**B** A new blank tools panel appears.

**C** We're adding tools to the panel one at a time.

**D** Use the Manage Tools Panel dialog to rename, duplicate, or delete a custom tools panel.

### OPENING A TEMPORARY PANEL

- ▶ Click a **link** (word or letter that has a blue underline) on the Control panel to open a related panel. For example, you could click Stroke to open a temporary Stroke panel, or click Opacity to open a temporary Transparency panel.
- ▶ Click the **Stroke** or **Fill color square** on the Control panel to open a temporary Swatches panel, or Shift-click either square to open a temporary Color panel.
- ▶ You can open other temporary panels by clicking a **thumbnail** or **arrowhead**. For example, you could click the Style thumbnail or arrowhead to open a temporary Graphic Styles panel.

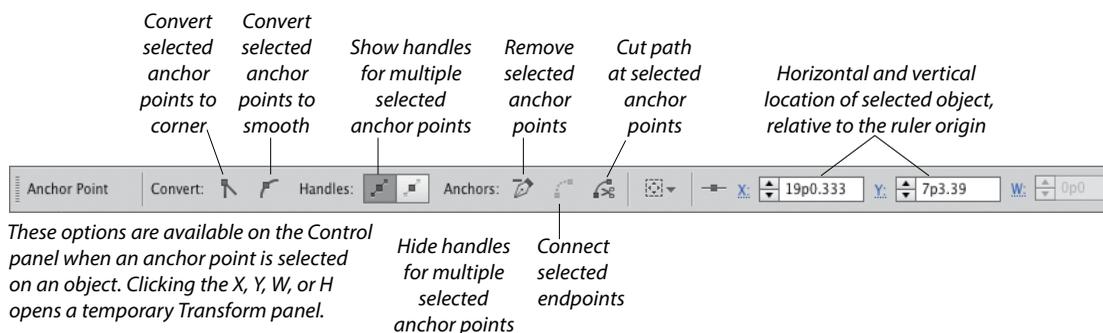

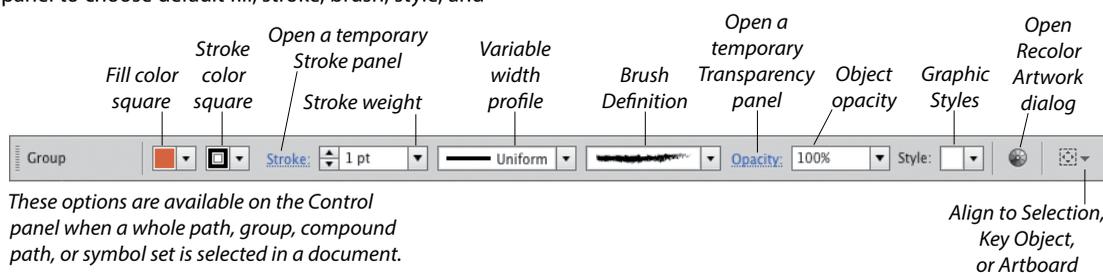

## The Control panel

The Control panel houses many frequently used controls conveniently under one roof, and changes contextually depending on what tool and kind of object are selected. Two of the many variations are shown below. For example, you can use this panel to apply fill and stroke colors; change an object's variable width profile, brush stroke definition, or opacity; apply basic type attributes, such as the font family and point size; align and distribute multiple objects; access controls for editing symbols, Image Trace, and Live Paint objects; and embed or edit linked images.

When no objects are selected, you can use this panel to choose default fill, stroke, brush, style, and

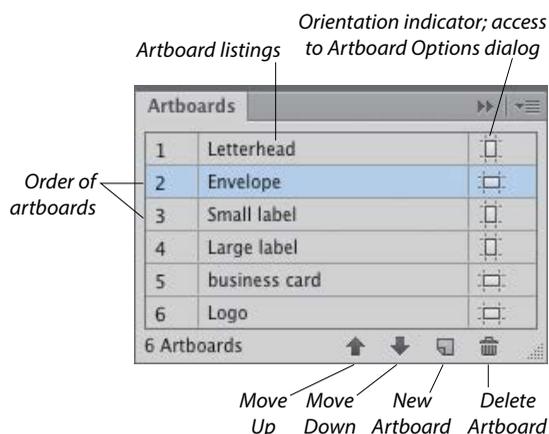

opacity settings for the current document and quickly access the Document Setup or Preferences dialog by clicking the button with that name.

To move the Control panel to the top or bottom, respectively, of the Application frame, choose Dock to Top or Dock to Bottom from the menu at the right end of the panel. Or if you prefer to make the panel free-floating, drag the gripper bar on the far left side. To control which options display on the panel, uncheck or check any of the items on the panel menu.

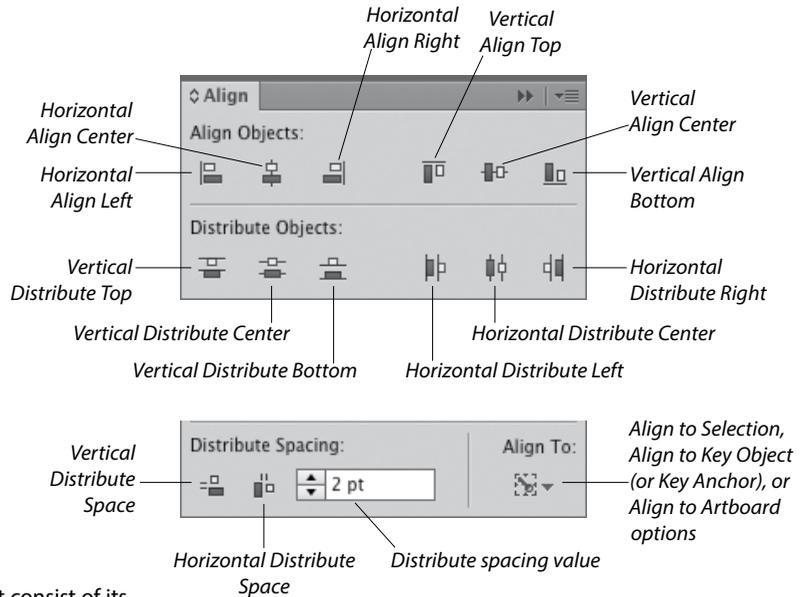

## Artboards panel

In addition to listing all the artboards in the current document, the Artboards panel lets you display, create, rename, and duplicate artboards; change their order; rearrange them in the document; choose options for them; change their orientation; and delete them. The Artboard Options dialog opens when you double-click the artboard orientation icon, which is located to the right of the artboard name. See pages 7–12 and 28.

## Align panel

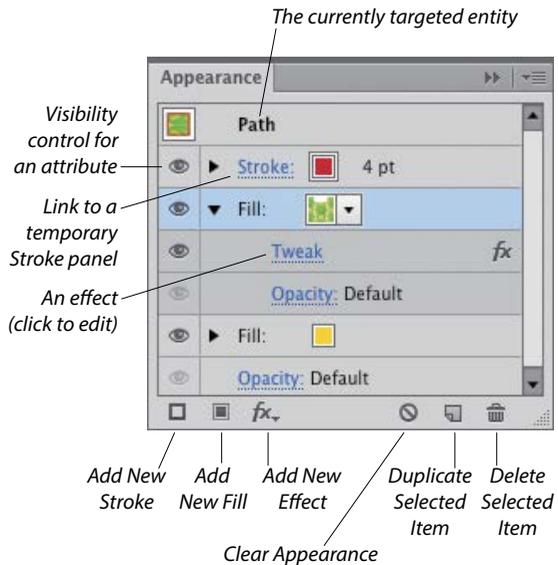

The buttons on the top two rows of the Align panel align and/or distribute two or more objects along their centers or along their top, left, right, or bottom edges. Objects can be aligned to a selection, an artboard, or a key object (one of the selected objects). Buttons in the lower part of the panel redistribute (equalize) the spacing among three or more objects. See pages 107–108. This panel can also be used to align anchor points (see page 174). Align buttons also appear on the Control panel when two or more objects are selected.

## Appearance panel

The appearance attributes of an object consist of its fill and stroke color, Stroke panel settings, effects, and Transparency panel settings. The Appearance panel lists the specific appearance attributes and settings for whichever layer, group, or object is currently targeted on the Layers panel. You can use the panel to add extra fill or stroke attributes, edit or remove attributes, apply and edit effects, and edit individual attributes within an applied graphic style.

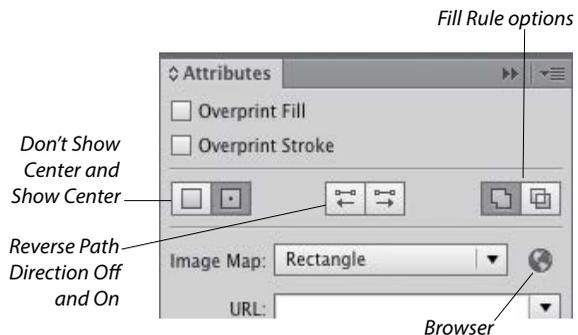

Using convenient in-panel features, you can edit attributes quickly. For example, you can click a link (blue underlined word) to open a dialog or a temporary panel: Click Stroke to open the Stroke panel, Opacity to open the Transparency panel, or the name of an effect to open its dialog. To open a temporary Swatches panel, click the Stroke or Fill color square, then click the thumbnail or arrowhead (or Shift-click the latter to open a temporary Color panel). See Chapter 14.

## Attributes panel

The Attributes panel lets you choose overprint options for an object (see page 431), show or hide an object's center point (see page 105), switch the fill between color and transparency in a compound path (see page 361), or change an object's fill rule.

You can also use this panel to create a hotspot for Web output. Assign an image map shape and a URL to a selected object, then to verify the URL in the Web browser that is currently installed on your system, click the Browser button.

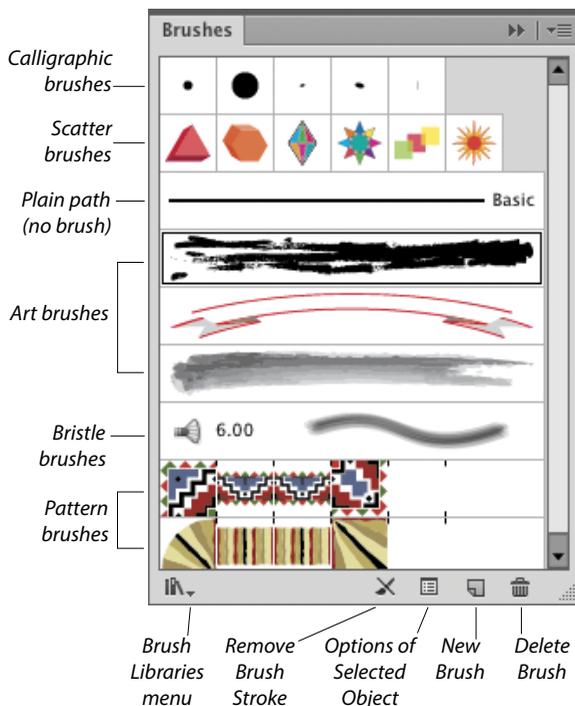

## Brushes panel

There are five varieties of decorative brushes that you can apply to paths: Calligraphic, Scatter, Art, Bristle, and Pattern. You can apply a brush either by choosing the Paintbrush tool and a brush and then drawing a shape, or by applying a brush to an existing path.

To personalize your brush strokes, you can create and edit custom brushes. If you modify a brush that's being used in a document, you'll be given the option via an alert dialog to update the paths with the revised brush. Brushes on the Brushes panel save with the current document. See Chapter 23.

To open a temporary Brushes panel, click the Brush Definition thumbnail on the Control panel, or for a selected Stroke listing on the Appearance panel, click the Brush Definition thumbnail.

### SHOWING OR HIDING PANEL OPTIONS

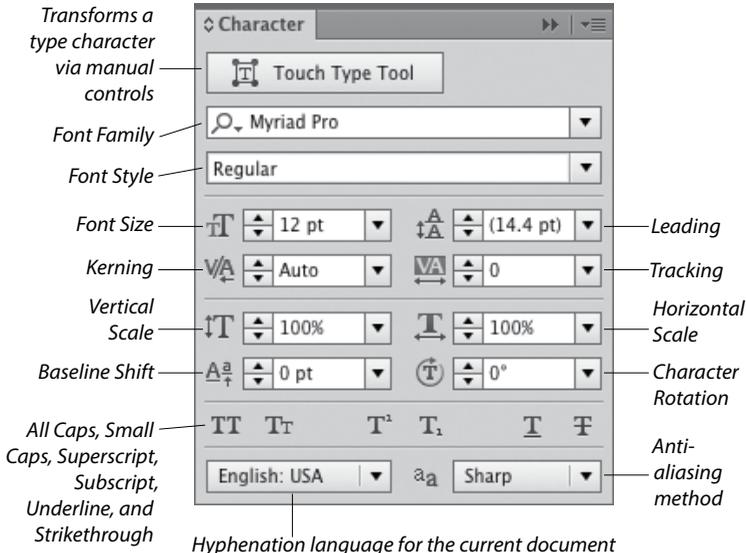

Some of the panels in Illustrator have extra options, which you may or may not see at first. To display or show a panel's full options, click the double arrow on its tab (once or twice).

## Character panel

You will use the Character panel to apply type attributes: font family, font style, font size, leading, kerning, tracking, horizontal scale, vertical scale, baseline shift, character rotation, and special glyphs. You can also use this panel to access the Touch Type tool, choose a language for hyphenation, and set the anti-aliasing method. See pages 267–272, 286, and 287.

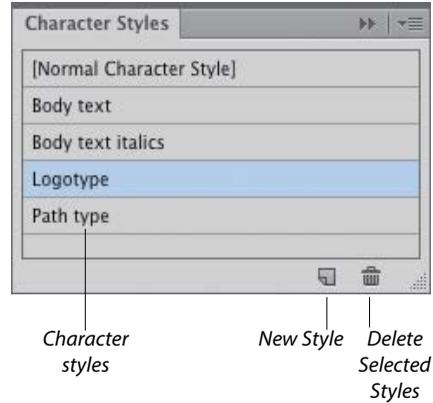

When a type tool or a type object is selected, the Control panel also provides some basic type controls. To open a temporary Character panel, click Character on the Control panel.

## Character Styles panel

A character style is a collection of settings for type characters, including a font family, font style, font size, leading, tracking, and kerning. Unlike paragraph styles, which apply to whole paragraphs, character styles are used to quickly format small amounts of type (such as bullets, boldfaced words, italicized words, or large initial caps) to distinguish them from the main text. When you edit a character style, any text in which it is being used updates accordingly.

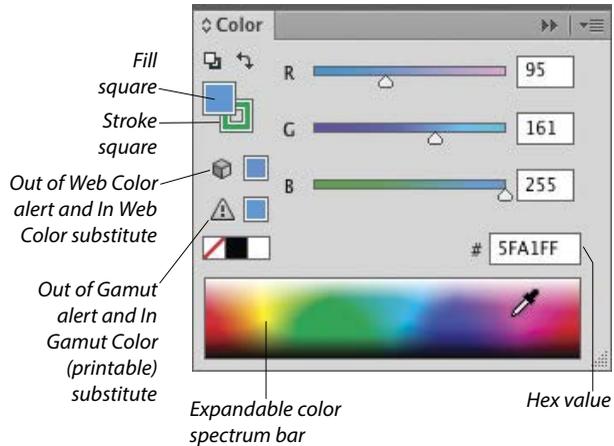

Using the Character Styles panel, you can create, apply, edit, duplicate, and delete styles. See pages 284–287. (Compare this panel with the Paragraph Styles panel, which is shown on page 51.)

## Color panel

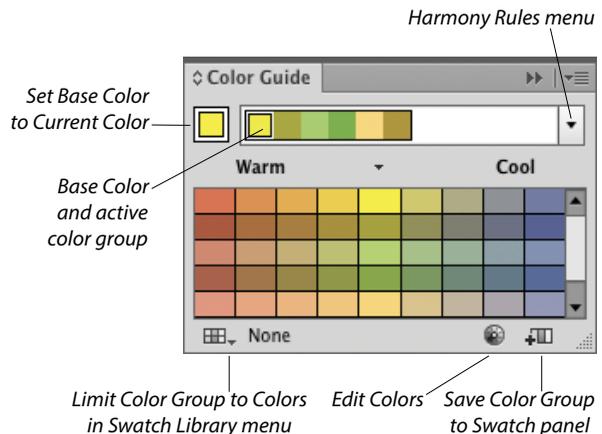

In Illustrator, colors are applied to an object's fill (interior) or stroke (edge). Use the Color panel to mix a global process color, enter a hexadecimal code, or set a tint percentage for a spot or global color. Choose a color model for the panel, such as RGB or CMYK, from the panel menu. Quick-select a color by clicking in the spectrum bar at the bottom of the panel, or click the black, white, or None button. You can expand the bar by dragging the bottom edge downward. See page 117.

To open a temporary Color panel, Shift-click the Fill or Stroke square or arrowhead on the Control panel or the Appearance panel.

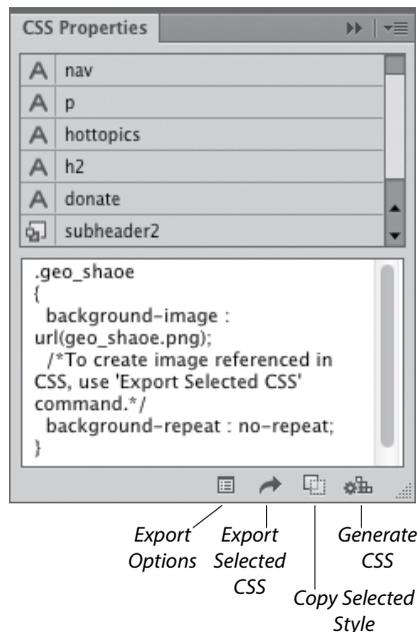

## Color Guide panel

Use the Color Guide panel to generate color schemes from a base color by choosing a harmony rule and/or a variation type (Tints/Shades, Warm/Cool, or Vivid/Muted). You can click any variation swatch to apply it as a fill or stroke color to one or more selected objects. You can also save variations from the Color Guide panel as a group to the Swatches panel, or edit the current color group via the Edit Colors dialog. See pages 115 and 128–130.

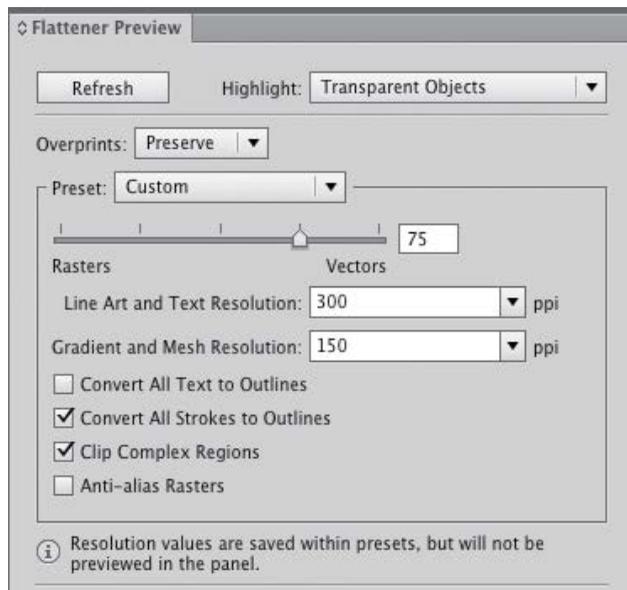

## CSS Properties panel

The CSS Properties panel lists all the character and graphic styles that are being used in the current Illustrator document, as well as the CSS code for the currently selected object(s). If you're designing a Web page and you want to ensure that it is styled correctly, you or a Web developer can copy the CSS code from this panel, and then paste the code into the HTML file. See pages 452–454.

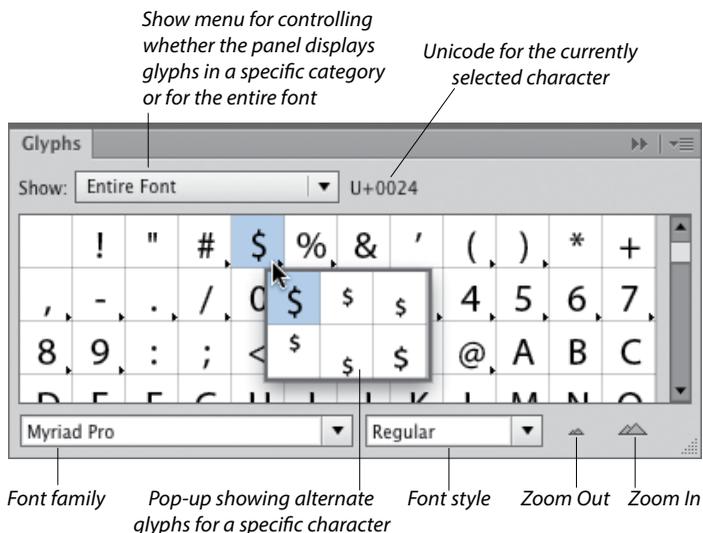

## Flattener Preview panel

Artwork that contains semitransparent objects must be flattened before it is printed. Using the Highlight menu options in the Flattener Preview panel, you can preview which objects in your document will be affected by flattening, adjust the flattening settings, then click Refresh to preview the effect of the new settings in your artwork. See page 436.

## Glyphs panel

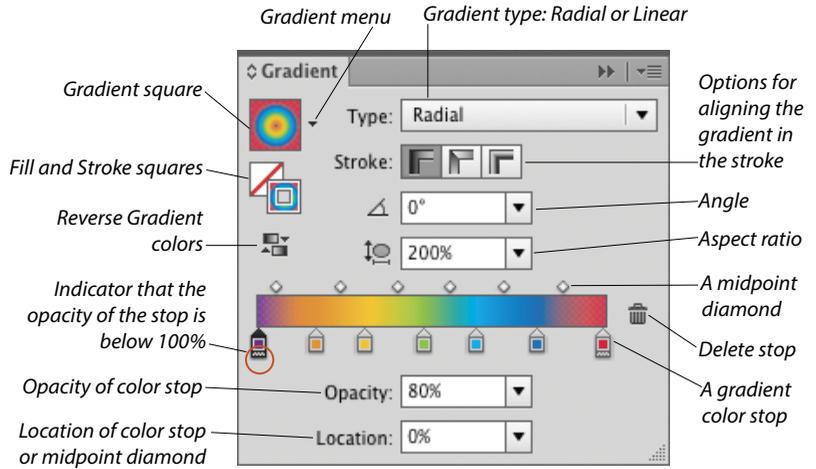

Using the Glyphs panel, you can find out which character variations (alternate glyphs) are available for any given character in a specific OpenType font, and insert specific glyphs from that font into your document (including glyphs that can't be entered via the keyboard). See page 279.

For the [Document Info](#) panel, see page 447.

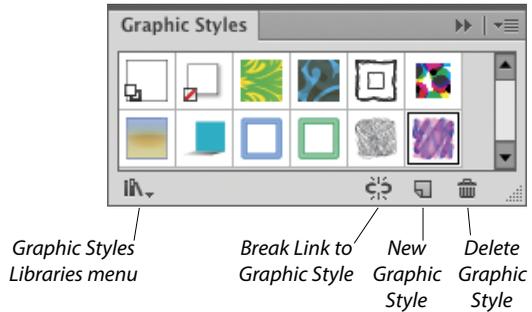

## Gradient panel

The Gradient panel lets you create, apply, and edit gradients, which are soft, gradual blends between two or more colors. You can use the panel to apply a gradient to an object's fill or stroke, adjust the amount of a color by dragging its stop, choose a different color or opacity value for a selected stop, click below the gradient slider to add new colors, move a midpoint diamond to change the location where two adjacent colors are mixed equally, reverse the gradient colors, change the overall gradient type or angle, or change the alignment of a gradient in an object's stroke. See Chapter 24.

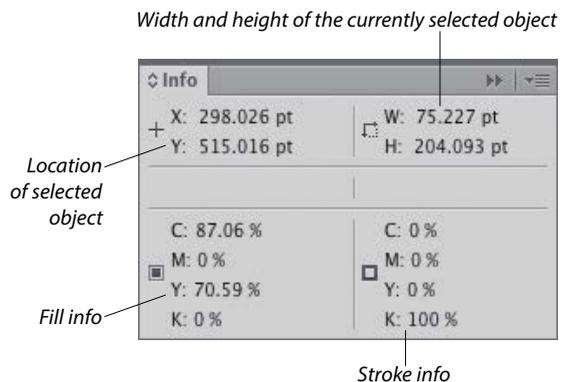

## Graphic Styles panel

The Graphic Styles panel enables you to store and apply collections of appearance attributes, such as multiple solid-color fills or strokes, transparency and overprint settings, blending modes, brush strokes, and effects. Using graphic styles, you can apply attributes quickly and create a cohesive look among multiple objects or documents (similar to how paragraph styles are used with type). See Chapter 16. To open a temporary Graphic Styles panel, click the Style thumbnail or arrowhead on the Control panel.

## Info panel

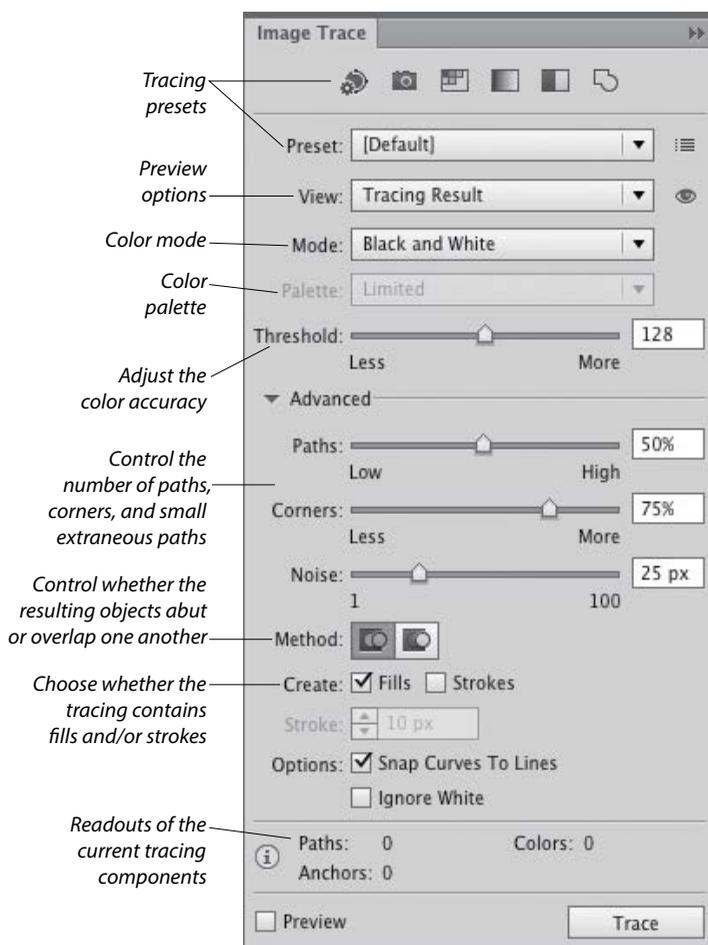

If no objects are selected in the current document, depending on the current tool, the Info panel lists the x/y (horizontal and vertical) location of the pointer. If an object is selected, the panel lists the location of the object, its width and height, and data about its fill and stroke colors (the color components; or the name of a pattern or gradient; or a color name or number, such as a PANTONE PLUS number). While an object is being transformed via a transform tool, the panel lists pertinent information, such as a percentage value for a scale transformation or an angle of rotation. When a type tool and type object are selected, the panel displays type specifications. When the Measure tool is used, the Info panel opens automatically and lists the distance and angle the tool has just calculated.

## Image Trace panel

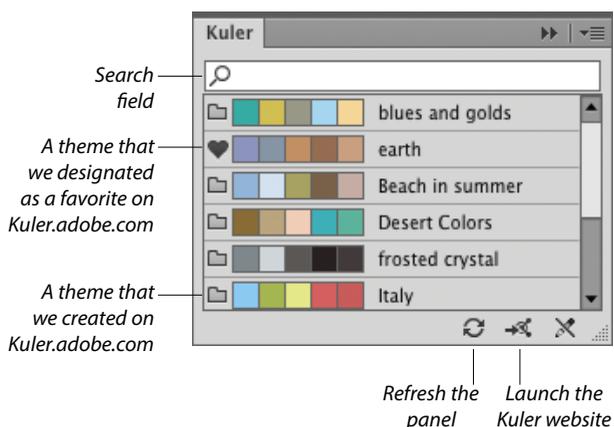

The Image Trace feature detects and traces areas of color and shade in a raster image that is opened or placed into Illustrator, such as a Photoshop, TIFF, or JPEG image or scanned artwork, and converts those areas to Illustrator paths.

You can choose from a wide array of tracing options on the Image Trace panel prior to the tracing—and because a tracing is “live,” you can also use the panel to fine-tune the results. You can use a built-in tracing preset (predefined settings) as a starting point, or create and apply custom presets. Among the numerous settings that you can specify are a mode (black and white, grayscale, or color), a color palette, the number of resulting colors, whether fill and/or stroke colors are produced, and the precision with which the image is traced. See Chapter 17.

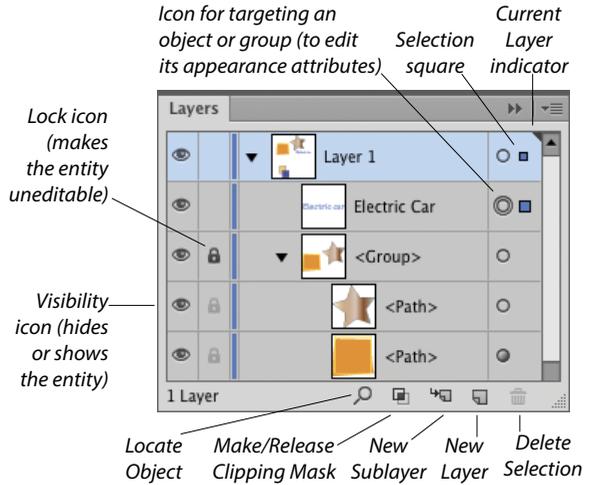

## Kuler panel

Kuler (pronounced “cooler”) is a free, Web-hosted Adobe application that lets users create, upload, and comment on color groups, called color themes. The Kuler panel in Illustrator displays the themes that you have created or designated as favorites on Kuler.adobe.com or that you have created using the Adobe Kuler app on an iPhone. Via the panel, you can apply colors directly to objects, or you can add colors to the Swatches panel for later use. To show the panel, choose Window > Kuler. See pages 133–135.

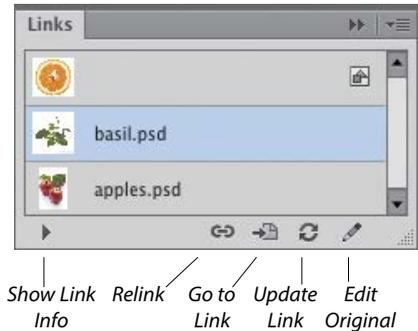

## Layers panel

The indispensable Layers panel lets you add and delete layers and sublayers in a document, and create layer groups. You can also use this panel to select, target, restack, duplicate, delete, hide, show, lock, unlock, merge, change the view for, or create a clipping set for a layer, sublayer, group, or individual object. When your artwork is finished, you can use a command on the panel menu to flatten the document into one layer or release all the objects to separate layers for export as a Flash animation. See Chapter 13.

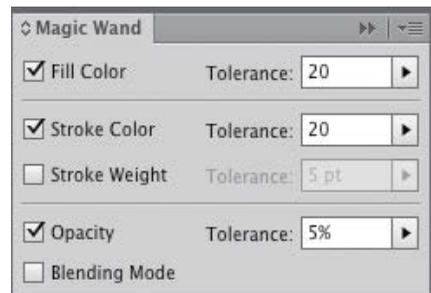

## Links panel

When you place an image from another application, such as Photoshop, into an Illustrator document, you can opt to have Illustrator embed a copy of the image into the file (and thereby increase the file size but allow the program to color-manage it) or merely link the image to your document (and minimize the file size but require the original file to be available for print output). Using the Links panel, you can monitor the status of linked images, convert a linked image to an embedded one (or vice versa), open a linked image in its original application for editing, update an edited image, restore the link to an image that is missing or modified, and view image data. See pages 314–317.

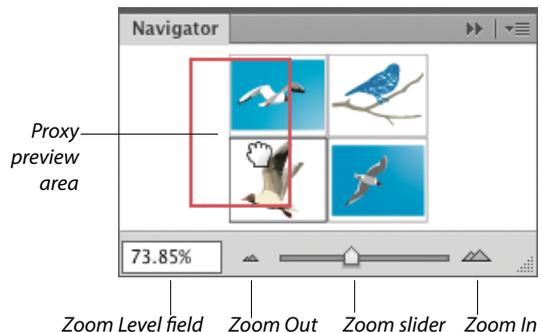

## Magic Wand panel

The Magic Wand tool selects objects that have the same or a similar fill color, stroke color, stroke weight, opacity, or blending mode as the currently selected object. Using the Magic Wand panel, you specify which attributes the tool may select and set a tolerance value for each attribute. For example, if you were to check Opacity, choose an opacity Tolerance of 10%, then click an object that has an opacity of 50%, the tool would find and select objects in the document that have an opacity between 40% and 60%. See page 99.

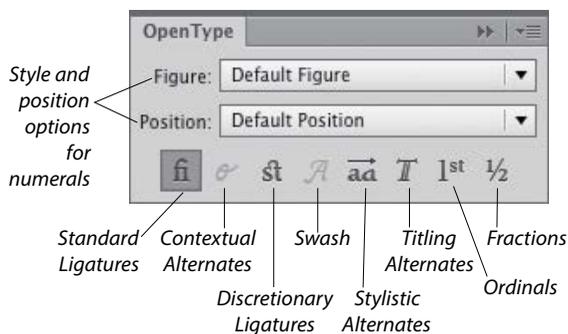

## Navigator panel

The Navigator panel has two main functions. To use it to move the current document in its window, drag or click in the proxy preview area (red outlined box). To change the document zoom level, use the zoom controls at the bottom of the panel. To both zoom to, and bring a specific area of, a document into view, Cmd-drag/Ctrl-drag in the proxy preview area.

## OpenType panel

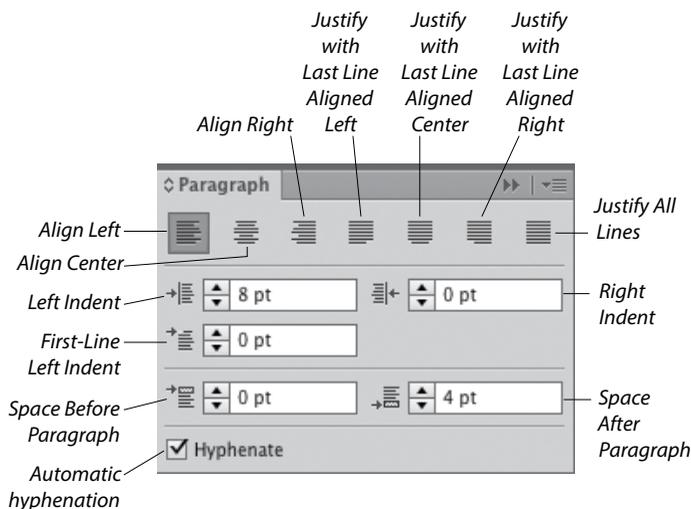

Among the Roman OpenType font families that ship with Illustrator, the fonts that contain an expanded character set and a large assortment of alternate glyphs are labeled with the word “Pro.” By clicking a button on the OpenType panel, you can specify which alternate characters (glyphs) will appear in your text when you type the requisite key or keys. The special characters for a given font may include ligatures, swashes, titling characters, stylistic alternates, ordinals, and fractions. You can also use the panel to specify options for numerals, such as a style (e.g., tabular lining or oldstyle) and a position (e.g., numerator, denominator, superscript, or subscript). See page 280.

## Paragraph panel

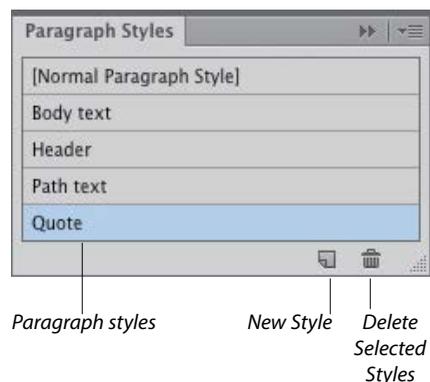

Use the Paragraph panel to apply settings that affect entire paragraphs, such as horizontal alignment, indentation, spacing before or after, and automatic hyphenation. Via the panel menu, you can choose hanging punctuation and composer options and open a dialog for choosing justification or hyphenation options. See pages 273, 277–279, and 284.

The Align Left, Align Center, and Align Right buttons are also available on the Control panel when a type object is selected. To open a temporary Paragraph panel, click Paragraph on the Control panel.

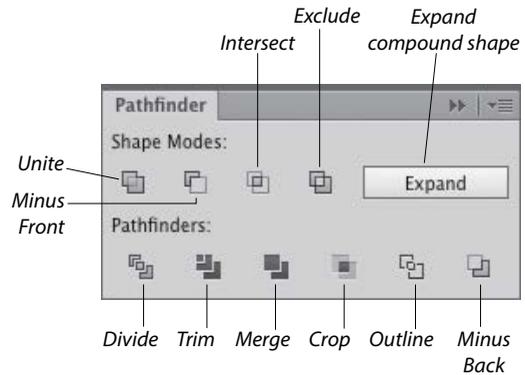

## Paragraph Styles panel

A paragraph style is a collection of paragraph specifications (including horizontal alignment, indentation, spacing before or after, word spacing, letter spacing, hyphenation, and hanging punctuation), as well as character attributes, such as the font family, font style, and font size. When you apply a paragraph style to one or more selected paragraphs, the type is reformatted with the specifications in that style. When you edit a paragraph style, the type in which it is being used updates accordingly. With paragraph (and character) styles, you can typeset text quickly and ensure that the formatting is consistent. Use the Paragraph Styles panel to create, store, apply, edit, duplicate, and delete paragraph styles for the current document. See pages 284–287.

## Pathfinder panel

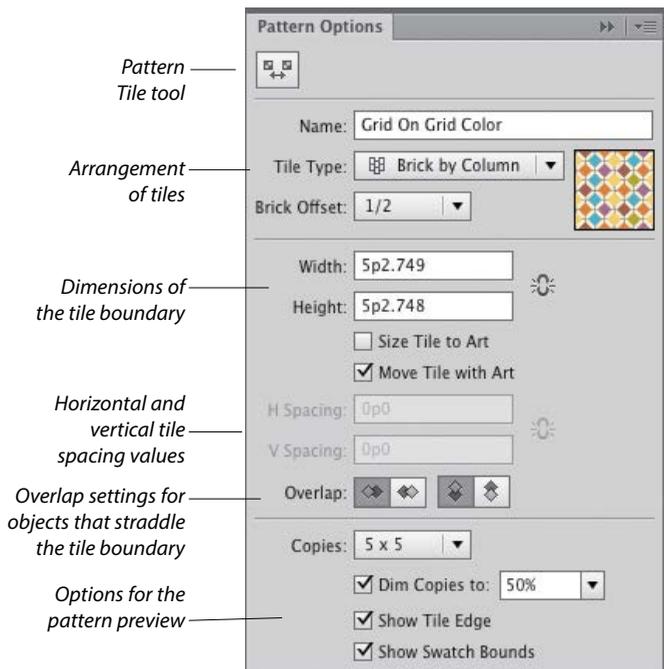

Depending on how they are applied, the Shape Mode commands on the top row of the Pathfinder panel combine selected, overlapping objects into one or more standard paths or into a compound shape. The Expand button converts a compound shape into either a path or a compound path (the latter if the command originally produced a cutout shape). The Pathfinder buttons on the bottom row of the panel produce flattened, cut-up shapes from multiple selected objects. See pages 362–364.

## Pattern Options panel

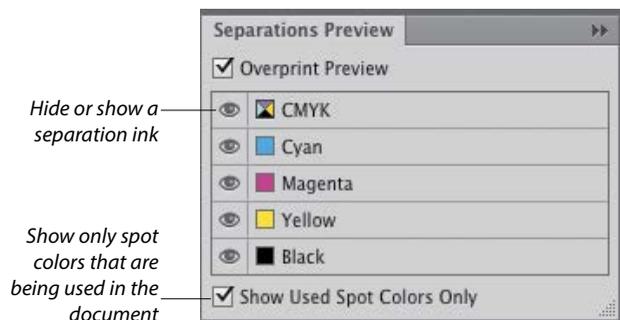

Via the Pattern Options panel, along with some intuitive on-image controls, you can create and edit seamless patterns. When you create a pattern, it appears automatically on the Swatches panel for the current document. You can apply any pattern swatch in the Swatches panel to an object's fill (interior) or stroke (edge).

The Pattern Options panel lets you change the pattern tiling configuration (Grid, Brick, or Hex); adjust the spacing between tiles; and for objects that straddle the tile boundary and overlap one another, control which objects are in front. You can also choose preview options for pattern-editing mode, including the number of copies that display, to what extent the copies are dimmed, and whether the tile and/or swatch boundaries display. See pages 137–144.

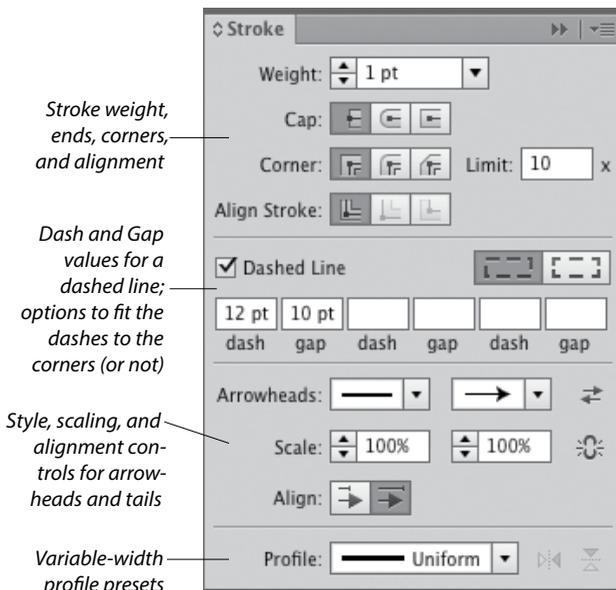

## Separations Preview panel

The Separations Preview panel gives you an idea of how the individual C, M, Y, and K color components in a CMYK document will separate to individual plates during the commercial printing process. You can use the panel to check that a color is properly set to knock out colors beneath it in your artwork, or to check whether a color is properly set to overprint on top of the other colors. Other uses for the panel are to monitor the use of spot colors in the artwork, to verify that any spot color is set to knock out colors beneath it, and to determine whether a specific black is a rich black (a mixture of C, M, Y, and K inks) or a simple black that contains only the K component. See pages 432–433.

## Stroke panel

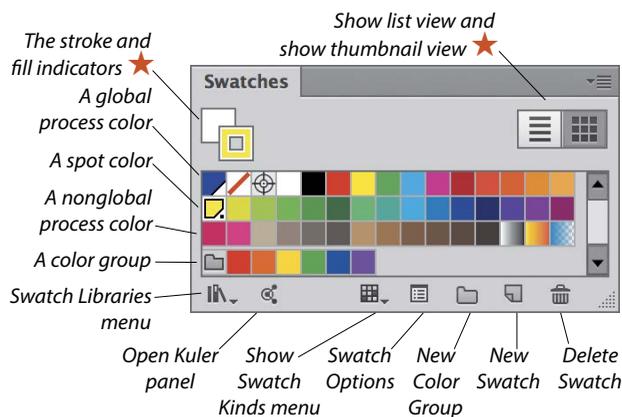

Stroke settings control the appearance of an object's path (edge). By using the Stroke panel, you can specify a stroke weight (thickness), cap (end) style, and corner (join) style, and an alignment option to control the position of the stroke on the path. You can also use the panel to create a dashed (or dotted) line or border, apply an arrowhead and/or tail style, and change the stroke width profile. See pages 122–124 and 166. To open a temporary Stroke panel, click Stroke on the Control or Appearance panel.

## Swatches panel

Use the Swatches panel to choose, store, and apply solid colors, patterns, gradients, and color groups. If you click a swatch, it becomes the current fill or stroke color (depending on whether the Fill or Stroke square is active on the Tools panel and Color panel), and it is applied to all currently selected objects.

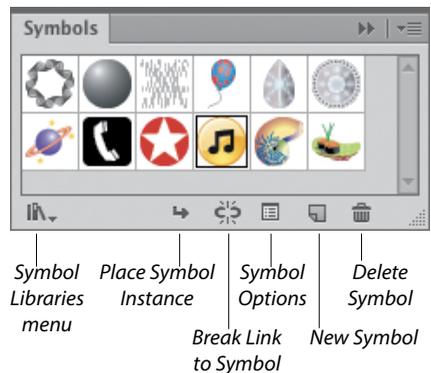

Double-clicking a swatch opens the Swatch Options dialog, in which you can change the swatch name or change its type to global process, nonglobal process, or spot. See pages 116, 118, 120, 126–129, and 136. To open a temporary Swatches panel, click the Fill or Stroke square or arrowhead on the Control or Appearance panel.

## Symbols panel

Symbols are Illustrator objects that are stored on the Symbols panel and save with the current document. Using symbols, you can quickly and easily create a complex collection of objects, such as a bank of trees or clouds. To create one instance of a symbol, you simply drag from the Symbols panel onto the artboard; to assemble multiple instances quickly into what is called a symbol set, you use the Symbol Sprayer tool.

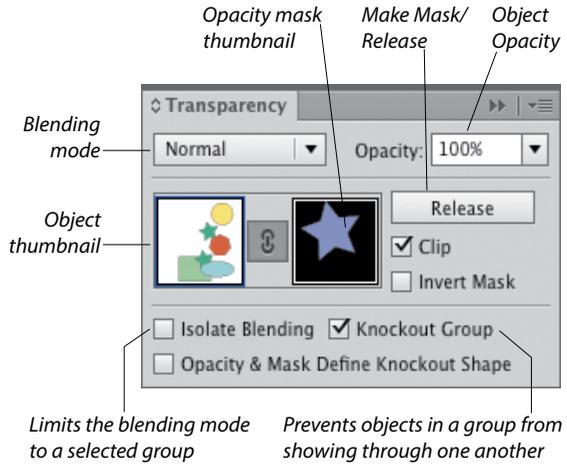

The other symbolism tools let you change the position, stacking order, proximity, size, rotation angle, or transparency of multiple instances in a set, or gradually apply a color tint or graphic style — while maintaining the link to the original symbol on the panel. If you edit the original symbol, all instances of that symbol in the document update automatically. See Chapter 28.

## Transparency panel

You can use the Transparency panel to change the blending mode or opacity of a layer, group, or individual object. The Make Mask button applies the opacity value and grayscale equivalent of a color (or colors), gradient, or pattern in the topmost object to underlying selected objects, and optionally hides sections of those objects that extend beyond its edges. See Chapter 27.

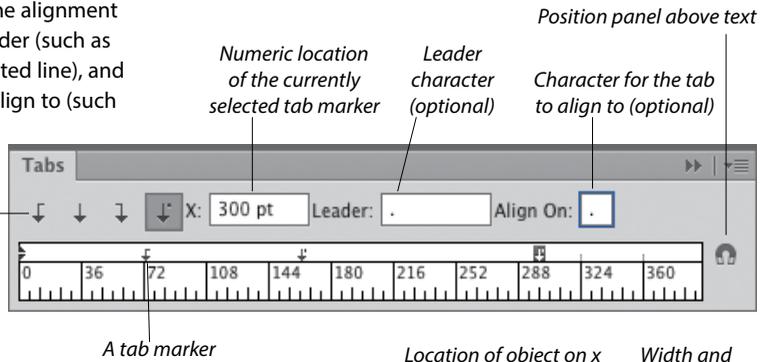

To open a temporary Transparency panel, click the Opacity link on the Control or Appearance panel. You can also change the opacity of an object directly via the Control panel.

## Tabs panel

The only way to align columns of text precisely is by using tabs and the Tabs panel. Using the panel, you can insert, move, and change the alignment of custom tab markers, specify a leader (such as a period character, to produce a dotted line), and specify a character for your text to align to (such as a decimal point). See page 288.

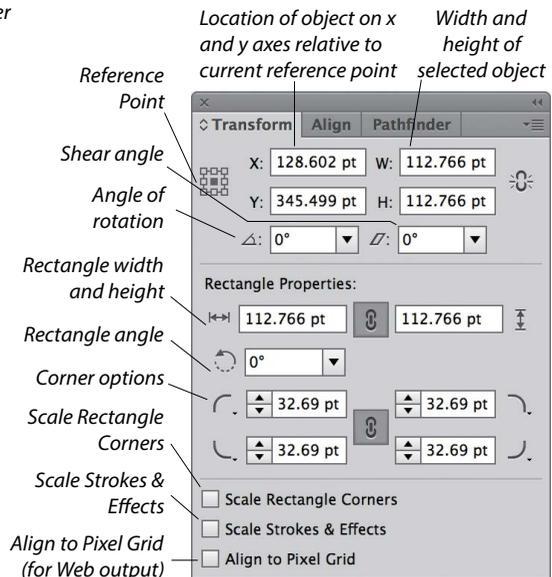

Left-, Center-, Right-, and Decimal-Justified alignment buttons for horizontal type (or Top-, Center-, Bottom-, and Decimal-Justified buttons for vertical type)

## Transform panel

The Transform panel lists the location, width, height, rotation angle, and shear angle of the currently selected object, and can be used to change those values. By clicking a reference point, you can control what part of the object the transformations are calculated from. The panel can also be used to align selected objects to the pixel grid. Via commands on the panel menu, you can control whether just the object, the object and a fill pattern, or just the fill pattern is transformed. See pages 152–153.

A reference point icon and X, Y, W, and H fields also appear on the Control panel when one or more paths are selected. To open a temporary Transform panel, click the X, Y, W, or H link (or if those fields aren't showing, click the word "Transform").

Unless noted otherwise, the entries in this index pertain to Illustrator.

## A

### acquiring images

- with drag-and-drop method, 307–308, 318
- dragging from Bridge, 318
- importing, 312–313
- methods, 307–308
- with Open command, 308
- with Place command, 309–310

**Add Anchor Point tool**, 41, 161

**Adobe Typekit dialog**, 63

**AI (Adobe Illustrator) format**, 13, 442

**alert dialogs**, 63, 240, 309

**Align panel**, 44, 107–108

### aligning

- anchor points, 108, 174
- artboards, 11
- center points, 102
- Control panel features, 107
- objects, 81, 84, 107–108
- paragraphs, 282
- shapes within symbol instances, 387
- with Smart Guides, 102–103
- strokes on paths, 122
- symbols, to pixel grid, 389
- text, 288

**Anchor Point tool**, 165

### anchor points

- adding, 161–163
- adjusting while drawing with Pen tool, 302
- aligning, 108, 174
