# YOUR CREDIT SCORE

HOW TO IMPROVE THE 3-DIGIT NUMBER  
THAT SHAPES YOUR FINANCIAL FUTURE

LIZ WESTON

*Award-Winning, Nationally Syndicated Personal Finance Columnist*

## Praise for the Previous Edition of *Your Credit Score*

“It’s never been more important to get a firm grip on your credit. Whether you’re looking to build your score, better it, or simply understand it, Liz Weston is the ultimate guide.”

—**Jean Chatzky**, financial journalist, author, and financial editor for the *Today Show*

“Recommended reading!”

—*Wall Street Journal* Online

“A great credit score can help you finish rich! Liz Weston gives solid, easy-to-understand advice about how to improve your credit fast. Read this book and prosper.”

—**David Bach**, bestselling author of *The Automatic Millionaire* and *The Automatic Millionaire Homeowner*

“Excellent book! Insightful, well written, and surprisingly interesting. Liz Weston has done an outstanding job demystifying an often intimidating and frustrating topic for the benefit of all consumers.”

—**Eric Tyson**, syndicated columnist and bestselling author of *Personal Finance for Dummies*

“No one makes complex financial information easy to understand like Liz Weston. Her straight talk and wise advice are invaluable to anyone with a credit card or checkbook—and that’s just about all of us.”

—**Lois P. Frankel**, Ph.D., author of *Nice Girls Don’t Get the Corner Office* and *Nice Girls Don’t Get Rich*

“In a country where consumers increasingly pay more when they have bad credit, Liz Weston’s book provides excellent tips and advice on ways to improve your credit history and raise your credit score. If you just apply one or two of her insightful suggestions, you’ll save many times the cost of this book.”

—**Ilyce R. Glink**, financial reporter, talk show host, and bestselling author of *100 Questions Every First-Time Home Buyer Should Ask*

“Your credit score can save you money or cost you money—sometimes a lot of money. Yet, most people don’t even know their scores, much less know how to make them better. Liz Weston can help you fix that. In this easy-to-understand guide, you’ll learn how to make sure your score helps you get the best deal on loans and insurance. You can’t afford not to read it.”

—**Gerri Detweiler**, consumer advocate and co-author of the book *Debt Collection Answers*

# Acknowledgments

Credit and credit scoring can be a complex subject, which means any journalist trying to cover this area of personal finance needs great sources. I've been extraordinarily fortunate to have found experts who not only knew their fields, but who were willing to spend time helping me understand them, too.

At the top of this list is Craig Watts, former spokesman for Fair Isaac Corp., who invested hours researching and carefully answering my endless questions. Others at Fair Isaac were also generous with their time and expertise, including Ryan Sjoblad, Lamont Boyd, Barry Paperno, Anthony Spauve, Christina L. Goethe and David Shellenberger. VantageScore CEO Barrett Burns and spokesman Jeff Richardson were valuable resources as well.

John Ulzheimer, founder of [www.CreditExpertWitness.com](http://www.CreditExpertWitness.com), is another of my go-to sources. John has a few decades' experience with credit, including stints at both Fair Isaac and Equifax, which gives him a unique depth of experience and authority.

Special thanks also to credit expert Gerri Detweiler, Robert Hunter of the Consumer Federation of America, Gail Hillebrand of the Consumer Financial Protection Bureau, Deanne Loonin and Robin Leonard at Nolo Press, and the folks at Insurance Information Institute, VISA, and Citibank. Thanks, too, to Beth Givens of the Privacy Rights Clearinghouse and Linda and Jay Foley, formerly of the Identity Theft Resource Center for their insights into credit fraud.

Sam Gerdano, executive director of the American Bankruptcy Institute and U.S. Senator Elizabeth Warren, author of *The Two-Income Trap: Why Middle-Class Mothers and Fathers Are Going Broke*, provided their vast knowledge and perspective about the bankruptcy epidemic in America.

Richard Jenkins, formerly my editor at *MSN Money*, conceived and helped shape the series of bankruptcy stories I wrote for that Web site. The project deepened my understanding of the bankruptcy process and its effect on people and their credit. Thanks, too, to the hundreds who volunteered their personal stories about the often-difficult decision to file.

Then there are the cheerleaders—the people who encouraged me to take on and complete this sometimes daunting project. Leading the charge was my husband, Will Weston, who picked up a lot of slack around the house and encouraged me to return to my computer on those many nights when I would have much rather watched a rerun of *Friends*.

My friend and colleague, Kathy Kristof, gave a realistic assessment of what was in store when juggling family, full-time work, and book writing—but told me to go for it anyway.

My first editor at FT Press, Jim Boyd, instantly understood why this book needed to be written and guided me expertly along its route to completion. He and his staff at FT Press were and are terrific.

Finally, I'd like to thank my readers who generously shared their experiences, opinions, praise, and criticism. Your letters and emails helped shape the information in this book and inspired me to keep digging for answers that could make a real difference in your lives.

# About the Author

**Liz Weston** is an award-winning personal finance columnist who authors the question-and-answer column “Money Talk,” which appears in the *Los Angeles Times* and other newspapers throughout the country.

Liz has been a regular commentator on American Public Media’s *Marketplace Money* and has contributed to NPR’s “Talk of the Nation” and “All Things Considered.” She has appeared on *Dr. Phil*, *Today Show*, and *NBC Nightly News*, and was for several years a weekly commentator on CNBC’s *Power Lunch*.

Her advice on credit and finance has been featured in *Consumer Reports*, *Marie Claire*, *Parents*, *Real Simple*, *Woman’s World*, *Woman’s Day*, *Good Housekeeping*, *Family Circle*, and many other publications.

Formerly a personal finance writer for the *Los Angeles Times*, Weston has won numerous reporting awards, including the 2010 Betty Furness Consumer Media Award by the Consumer Federation of America, designed to honor individuals who have made “exceptional progress in American consumerism.”

Her other books include *The 10 Commandments of Money*, which *The New York Times* praised as “a wonderful basic personal finance book... [with] enough counterintuitive ideas to keep even people who know a bit about personal finance reading further.” She is also the author of *Deal with Your Debt*, *Easy Money*, and *There Are No Dumb Questions About Money*, all published by Pearson.

Weston is a graduate of the certified financial planner training program at University of California, Irvine. She lives in Los Angeles with her husband and daughter. She can be reached via the “Contact Liz” form on her Web site, [AskLizWeston.com](http://AskLizWeston.com).

# Introduction

You have more power than ever before to shape your credit—and your financial future.

Twenty years ago, you didn't even have the right to know the numbers that lenders used to judge you. Today, you can get dozens of your scores online within seconds, along with detailed information about what goes into creating each one. Instead of having too little information, sometimes it can feel like you have too much, to the point where it's difficult to know what's truly important and what you can ignore.

That's where this book comes in. My goal is to help you get the scores you need to live a successful, financially responsible life without having to spend half that life learning about the process.

People's hunger to learn about credit scoring helped make previous editions of this book into national best-sellers. The book you have in your hands now has been completely updated to reflect current laws, trends, and lending practices. It gives you everything you need to know about how to protect your scores if they're high and improve them if they're not.

Now more than ever, knowing how to fix, improve, and protect your credit score is essential for successfully navigating your financial life.

# 1

## **Why Your Credit Score Matters**

In recent years, a simple three-digit number has become critical to your financial life.

This number, known as a credit score, is designed to predict the possibility that you won't pay your bills. Credit scores are handy for lenders, but they can have enormous repercussions for your wallet, your future, and your peace of mind.

### **How Your Credit Scores Affect You**

If your credit scores are high enough, you'll qualify for a lender's best rates and terms. Your mailbox will be stuffed with low-rate offers from credit card issuers, and mortgage lenders will fight for your business. You'll get great deals on auto financing if you need a car, home loans if you want to buy or improve a house, and small business loans if you decide to start a new venture.

If your scores are low or nonexistent, however, you'll enter a no-man's land where mainstream credit is all but impossible to come by. If you find someone to lend you money, you'll pay high rates and fat fees for the privilege. A bad or even mediocre credit score can easily cost you tens of thousands and even hundreds of thousands of dollars in your lifetime.

You don't even have to have tons of credit problems to pay a price. Sometimes all it takes is a single missed payment to knock more than 100 points off your credit score and put you in a lender's higher risk category.

And we aren't just talking about loans. Landlords, insurers, wireless carriers, and utilities, among others, also use credit-based scores to evaluate applicants and determine deposits. A good score can save you money; a bad score can make life more expensive and difficult.

Yet too many people know far too little about credit scores and how they work. Here's just a sample of the kinds of emails and letters I get every day from people puzzling over their credit:<sup>1</sup>

*“I just closed all of my credit card accounts trying to improve my credit. Now I hear that closing accounts can actually hurt my score. How can I recover from this? Should I try to reopen accounts so that I can have a higher amount of available credit?” Hallie in Shreveport, LA*

*“How do you get credit if you don't have it? I keep getting turned down, and the reason is always ‘insufficient credit history.’ How can I get a decent credit score if I don't have credit?” Manuel in San Diego, CA*

*“I am a 25-year-old male who made a few bad credit decisions while in college, as many of us do. I need to improve my credit drastically so I do not continue to get my eyes poked out on interest. What can I do to boost my credit score fast?” Stephen in Dallas, TX*

*“I joined a credit-counseling program because I was in way over my head. But my wife and I plan on buying a house within the next three years, and she has expressed concern that my participation in this debt management program could hurt my credit score. What should I do to help my overall chances with the mortgage process and get the best rate possible?” Paul in Lodi, NJ*

*“I'm 33 and have never had a single late payment or credit issue in my life. Yet, my credit score isn't as high as I thought it would be. What does it take to get a perfect score?” Brian in South Bend, IN*

<sup>1</sup> As with other real-life anecdotes in this book, the writers' anonymity has been protected and their messages might have been edited for clarity.

What these readers sense, and what credit experts know, is that ignorance about your credit score can cost you. Sometimes people with great scores get offered lousy loan deals but don't realize they can qualify for better terms. More often, people with bad or mediocre credit get approved for loans, but don't realize the high price they're paying.

## **What It Costs Long Term to Have Poor or Mediocre Credit Scores**

If you need an example of exactly how much credit scores can matter, let's examine how these numbers affect two friends, Emily and Karen.

Both women got their first credit card in college and carried an \$8,000 balance on average over the years. (Carrying a balance isn't smart financially, but unfortunately, it's an ingrained habit with many credit card users.)

Emily and Karen also bought new cars after graduation, financing their purchases with \$20,000 auto loans. Every seven years, they replaced their existing cars with new ones until they bought their last vehicles at age 70.

Each bought her first home with \$350,000 mortgages at age 30, and then moved up to a larger house with \$450,000 mortgages after turning 40.

Neither has ever suffered the embarrassment of being rejected for a loan or turned down for a credit card.

But here the similarities end.

Emily was always careful to pay her bills on time, all the time, and typically paid more than the minimum balance owed. Lenders responded to her responsible use of credit by offering her more credit cards at good rates and terms. They also tended to increase her credit limits regularly. That allowed Emily to spread her credit card balance across several cards. All these factors helped give Emily excellent credit scores. Whenever a lender tried to raise her interest rate, she would politely threaten to transfer her balance to another card. As a result, Emily's average interest rate on her cards was 9.9 percent.

Karen, by contrast, didn't always pay on time, frequently paid only the minimum due, and tended to max out the cards that she had. That made lenders reluctant to increase her credit limits or offer her new cards. Although the two women owed the same amount on average, Karen tended to carry larger balances on fewer cards. All these factors hurt Karen's credit—not enough to prevent her from getting loans, but enough for lenders to charge her more.

Karen had much less negotiating power when it came to interest rates. Her average interest rate on her credit cards was 19.9 percent.

### *Credit Cards*

	<b>Emily</b>	<b>Karen</b>
Credit score	760	660
Interest rate	9.90%	19.90%
Annual interest costs	\$792	\$1,592
Lifetime interest paid	\$39,600	\$79,600
Karen's penalty		\$40,000

Emily's careful credit use paid off with her first car loan. She got the best available rate, and she continued to do so every time she bought a new car until her last purchase at age 70. Thanks to her lower credit score, Karen's rate was three percentage points higher.

### *Auto Loans*

	<b>Emily</b>	<b>Karen</b>
Credit score	760	660
Interest rate	4.25%	8.25%
Monthly payment	\$371	\$408
Interest cost per loan	\$2,235	\$4,475
Lifetime interest paid	\$17,880	\$35,804
Karen's penalty		\$17,924

The differences continued when the women bought their houses. During the ten years that the women owned their first homes, Emily paid \$34,000 less in interest.

### *Mortgage 1 (\$350,000)*

	<b>Emily</b>	<b>Karen</b>
Credit score	760	660
Interest rate	4.38%	5.38%
Monthly payment	\$1,749	\$1,961
Total interest paid (10 years)	\$139,057	\$173,222
Karen's penalty		\$34,165

Karen's interest penalty only grew when the two women moved up to larger houses. Over the 30-year life of their mortgages, Karen paid nearly \$100,000 more in interest.

*Mortgage 2 (\$450,000)*

	<b>Emily</b>	<b>Karen</b>
Credit score	760	660
Interest rate	4.38%	5.38%
Monthly payment	\$2,248	\$2,241
Total interest paid (30 years)	\$359,319	\$406,807
Karen's penalty		\$98,338

Karen's total lifetime penalty for less-than-stellar credit? More than \$190,000.

If anything, these examples underestimate the true financial cost of mediocre credit:

- The interest rates in the examples are relatively low in historical terms. Higher prevailing interest rates would increase the penalty that Karen pays.
- Karen probably paid insurance premiums that were 20 percent to 30 percent higher than Emily's, and she might have had more trouble finding an apartment, all because of her credit.
- The examples don't count "opportunity cost"—what Karen could have achieved financially if she weren't paying so much more interest.

Because more of Karen's paycheck went to lenders, she had less money available for other goals: vacations, a second home, college educations for her kids, and retirement.

In fact, if Karen had been able to invest the extra money she paid in interest instead of sending it to banks and credit card companies, her savings might have grown by a whopping \$2 million by the time she was 70.

With so much less disposable income and financial security, you wouldn't be surprised if Karen also experienced more anxiety about money. Financial problems can take their toll in innumerable ways, from stress-related illnesses to marital problems and divorce.

So, if you've ever wondered why some families struggle while others in the same economic bracket seem to do just fine, the answers typically lie with their financial habits—including how they handle credit.

## How Credit Scoring Came into Being

The question remains: How did one little number come to have such an outsized effect on our lives?

Credit scoring has been in widespread use by lenders for several decades. By the end of the 1970s, most major lenders used some kind of credit-scoring formulas to decide whether to accept or reject applications.

Many were introduced to credit scoring by two pioneers in the field: engineer Bill Fair and mathematician Earl Isaac, who founded the firm Fair Isaac in 1956. Over the years, the pair convinced lenders that mathematical formulas could do a better job of predicting whether an applicant would default than even the most experienced loan officers.

A formula wasn't as subject to human whims and biases. It wouldn't turn down a potentially good credit risk because the applicant was the "wrong" race, religion, or gender, and it wouldn't accept a bad risk because the applicant was a friend.

Credit scoring, aided by ever more powerful computers, was also fast. Lending decisions could be made in a matter of minutes, rather than days or weeks.

Early on, each company had its own credit-scoring formula, tailored to the amount of risk it wanted to take, its history with various types of borrowers, and the kind of people it attracted as customers. The factors that fed into the formula varied, but many took into account the applicant's income, occupation, length of time with an employer, length of time at an address, and some of the information available on his or her credit report, such as the longest time that a payment was ever overdue.

These calculations took place behind the scenes, invisible to the consumer and understood by a relatively small number of experts and loan executives.

The cost to develop and implement these custom formulas was—and still is—considerable. It was not unusual to spend \$100,000 or more and take 12 months just to set one up. In addition, not every creditor had a big enough database to work with, especially if the company wanted to branch out into a new line of lending. A credit card lender that wanted to start offering car loans, for example, might find that its database couldn't adequately predict risk in vehicle lending.

That led to credit scores based on the biggest lending databases of all—those held at the major credit bureaus, which include Equifax, Experian, and TransUnion. Fair Isaac developed the first credit bureau-based scoring system in the mid-1980s, and the idea quickly caught on.

Instead of basing its calculations on any single lender's experience, this type of scoring factored in the behavior of literally millions of borrowers. The model looked for patterns of behavior that indicated a borrower might default, as well as patterns that indicated a borrower was likely to pay as agreed. The score evaluated the consumer's history of paying bills, the number and type of credit accounts, how much available credit the customer was using, and other factors.

This credit-scoring model was useful for more than just accepting or rejecting applicants. Some lenders decided to accept higher-risk clients but to charge them more to compensate for the greater chance that they might default. Lenders also used scores to screen vast numbers of borrowers to find potential future customers. Instead of waiting for people to apply, credit card companies and other lenders could send out reams of preapproved offers to likely prospects.

## How Credit Use Has Changed over the Years

Credit scoring is one of the reasons why consumer credit absolutely exploded in the 1990s. Lenders felt more confident about making loans to wider groups of people because they had a more precise tool for measuring risk. Credit scoring also allowed them to make decisions faster, enabling them to make more loans. The result was an unprecedented rise in the amount of available consumer credit. Here are just a few examples of how available credit expanded during that time:

- The total volume of consumer loans—credit cards, auto loans, and other nonmortgage debt—more than doubled between 1990 and 2000, to \$1.7 trillion.
- The amount of credit card debt outstanding rose nearly three-fold between 1990 and 2002, from \$173 billion to \$661 billion.
- Home equity lending soared from \$261 billion in 1993 to more than \$1 trillion ten years later.

Credit scoring got a huge boost in 1995. That's when the country's two biggest mortgage-finance agencies, Fannie Mae and Freddie Mac, recommended lenders use FICO credit scores, which is what Fair Isaac called its groundbreaking score. Because Fannie Mae and Freddie Mac purchase more than two-thirds of the mortgages made, their recommendations carry enormous weight in the home loan industry.

The recommendations are also what finally began to bring credit scoring to the public's attention.

If you've ever applied for a mortgage, you know it's a much more involved process than getting a credit card. When you apply for a credit card, you typically fill out a relatively brief form, submit it, and get your answer back quickly—sometimes within seconds, if you're applying online or at a retail store. The process is highly automated, and there typically isn't much personal contact.

Contrast that with a mortgage. Not only do you have to provide a lot more information about your finances, but getting a home loan also requires that you have ongoing personal contact with a loan officer or mortgage broker. You might be asked to clarify something in your application, be told to supply more information, or be given updates about how your request for funds is being received.

## **Consumer's Fight for Truth About Credit Scores**

It was in the course of those conversations that an increasing number of consumers started hearing about FICOs and credit scores. For the first time, people learned that the reason they did or didn't get the loan they wanted was because of a three-digit number. It became obvious that lenders were putting a lot of stock in these mysterious scores.

But when consumers tried asking for more details, they often hit a brick wall. Fair Isaac, the leader in the credit-scoring world, wanted to keep the information secret. The company said it worried that consumers wouldn't understand the nuances of credit scoring, or they would try to "game the system" if they knew more. Fair Isaac feared that its formulas would lose its predictive capability if consumers started changing their behavior to boost their scores.

Now, some sympathetic mortgage officials didn't buy into Fair Isaac's company line. They thought consumers deserved to know their score, and these officials also often tried to explain how the numbers were created.

Unfortunately, because Fair Isaac wouldn't disclose the formula details, a lot of these explanations were dead wrong. Even more unfortunately, some loan officers perpetuated these myths about credit scoring, even as we learned much more information about what goes into them. (You'll read more about these myths in Chapter 5, "Credit-Scoring Myths.")

Resentment about the secret nature of credit scores came to a head in early 2000. That's when one of the then-new breed of Internet lenders, E-Loan, defied Fair Isaac by letting consumers view their FICO credit scores. For about a month, people could actually take a peek at their scores online and learn some rudimentary information about what the numbers meant. Some 25,000 consumers took advantage of the free service before E-Loan's source for credit-scoring information was cut off.

But the proverbial cat was out of the bag. A few months later, with consumer advocates demanding disclosure and lawmakers drafting legislation requiring it, Fair Isaac caved. It posted the 22 factors affecting a credit score on its Web site, grouped into the five categories you'll read about in the next chapter. Shortly after that, the company partnered with credit bureau Equifax to provide consumers with their credit scores and reports for a \$12.95 fee.

In late 2003, Congress finally got around to passing a law that gave people a right to see their scores. By the time this update to the Fair Credit Reporting Act was signed into law, however, access to credit scores was already a fact.

Consumers' access to credit scores was further expanded in 2011, when a portion of the Dodd-Frank financial reform bill kicked in that required lenders to disclose credit scores to applicants.

## **Credit Controversies**

Controversies over credit scoring continue to rage. Here are just a few of them.

### **Credit Scoring's Vulnerability to Errors**

No matter how good the mathematics of credit scoring, it's based on information in your credit report—which may be, and frequently is, wrong. Sometimes the errors are small or irrelevant, such as when your credit file lists a past employer as a current employer. Other times the problems are significant, such as when your file contains accounts that don't belong to you. Many people discover this misinformation only after they've been turned down for credit.

The credit bureaus handle billions of pieces of data every day, so to some extent errors, outdated information, and missing information are inevitable—but the credit-reporting system often makes it difficult to get rid of errors after you spot them.

The rise in automated lending decisions means a human might never see your application or notice that something's awry. The explosion in identity theft, with its millions of victims a year, means more bad, fraudulent information is included in innocent people's credit files every day.

Patricia of Seattle, Washington, tells of the ongoing horror of becoming a victim:

*“I’ve always been careful about protecting my identity. Unfortunately, when I was trying to purchase a home, the real estate broker, to whom I’d given my application with birth date and Social Security number, had her laptop stolen. My worst fears came true when, four months later, I suddenly had creditors calling me like crazy asking why I wasn’t paying on accounts that were just recently opened in my name. On top of this, I learned the criminals had also stolen my mail with preapproved credit cards. This has created a nightmare of time, work, and frustration trying to clean up my credit history. It’s been over two years now, and I’m still working with the major credit-reporting agencies as we speak.”*

## Credit Scoring’s Complexity

You’re being judged by the formula, so shouldn’t it be easy to understand and predictable? Not even credit-scoring experts can always forecast in advance how certain behaviors will affect a score. Because the formula takes into account so many variables, the best answer they can muster is, “It depends.”

The variety of different scoring formulas and different approaches among lenders can confuse matters even further.

Lenders can get scores calculated from different versions of the FICO formula, as well as formulas that have been modified for auto or bankcard lenders, for example. They also can have in-house formulas that incorporate a FICO score along with other information that might punish or reward certain behaviors more heavily than the FICO formula does on its own. Some call the result a FICO score, even though that’s not technically correct.

Not surprisingly, this causes confusion for consumers and mortgage professionals alike.

A. J. Cleland, an Indianapolis mortgage broker, discovered how different scores could be when trying to help a client who had been turned down for a

loan by a bank. The bank reported the client's FICO score was 602, whereas the FICO score Cleland pulled for the client—on the same day and from the same credit bureau—was 31 points lower:

*“I called my credit provider and was informed that there are different types of reports and different scores,” Cleland said. “I thought your score was your score, period.”*

## Credit Scoring's Use for Noncredit Decisions

I mentioned earlier that many businesses might check your credit and your credit score when evaluating your application; however, the most controversial noncredit use of scoring is in insurance.

Insurers have discovered an enormously strong link between the quality of your credit and the likelihood you'll file a claim. They can't really explain it, but every large study of the issue has confirmed that this link exists. The worse your credit, the more likely you will cost an insurer money. The better your credit, the less likely you are to have an accident or otherwise suffer an insured loss.

As a result, most homeowners and auto insurers use credit scoring to decide who to cover and what premiums to charge them.

That outrages many consumers and consumer advocates who don't see a logical connection between credit and insurance. Julie, a city worker in Poulsbo, Washington, saw her insurances soar after a divorce and subsequent bankruptcy trashed her credit:<sup>2</sup>

*“I have had the same insurer for 30 years, never been late, never missed a payment, never had an accident, and never filed a claim—yet now I pay the price of higher rates. I absolutely do not understand how this is fair.”*

This leads to another controversy, spelled out in the next section.

## Credit Scoring's Potential Unfairness

Developers of credit scoring point out their formulas are designed not to discriminate. Credit scores don't factor in your income, race, religion, ethnic background, or anything else that's not on your credit report.

<sup>2</sup> Like many divorced people, Julie discovered that her ex still had the power to trash her credit long after the marriage was over. His unpaid bills, run up on once-joint accounts, showed up on her credit report and ultimately led her to file bankruptcy.

But it's not clear whether the result of those formulas actually is non-discriminatory. Some consumer advocates worry that some disadvantaged groups might suffer disproportionately as a result of credit scoring.

Among their theories: People who have low incomes or who live in some minority neighborhoods might have less access to mainstream lenders and thus have worse credit scores. The lenders these disadvantaged populations do use—finance companies, subprime lenders, and community groups—might not report to credit bureaus, making it harder to build a credit history. If these lenders do report to the bureaus, their accounts might count for less in the credit-scoring formula than those of mainstream lenders. Seasonal work is also more prevalent in some neighborhoods, which can lead to a higher rate of late payments in the off-seasons.

Even if credit scoring doesn't discriminate against groups, it might discriminate against you.

No credit-scoring system is perfect. Lenders know that their formulas will reject a certain number of people who actually would have paid their bills. Another group will be accepted as good risks but then default.

If these groups get too large, the lender has trouble. When too many bad applicants are accepted, the lender's profits plunge. When too many good applicants are rejected, the lender's competitors can scoop them up and make more money.

But lenders accept a certain number of misclassified applicants as a cost of doing business. That's little comfort to you, if you're one of the responsible ones who loses out on the mortgage you need to buy a home, or if you end up paying more for it.

## Did Credit Scoring Cause the Financial Crisis?

Critics have pointed to the failure of credit-scoring formulas, especially FICO, to predict soaring default rates as evidence the scores don't work.

Fair Isaac has responded that credit scores were designed to be part of a larger decision-making system, with lenders also taking into account other factors such as the borrower's income, assets, other debts, and ability to repay the loan in question.

Indeed, as far back as 2005, acting U.S. Comptroller of the Currency Julie Williams warned lenders that they were relying too much on “risk-factor shortcuts,” such as credit scores that focus on past credit performance, without considering the borrowers’ ability to pay the new debt they were taking on.

Lenders paid little heed and in fact continued to lower the scores they found acceptable. By the peak of the mortgage boom in the Fall of 2006, many had stopped bothering to verify borrowers’ income or assets. What’s more, loan approvals were often based on the borrowers’ supposed (but unproven) ability to cover only the initial payments, not the much higher amount that would come due when the variable-rate mortgage rates inevitably adjusted higher.

Similar trends could be seen in auto lending, where some auto finance companies stopped asking about incomes at all, and in credit cards, where issuers continued extending credit limits to people who already carried debt that was greater than what they earned in a year.

Since the credit implosion, newly chastened lenders have once again begun to consider factors other than FICO’s, but they have not abandoned credit scores as a crucial part of their decision-making process.

---

Given all the problems with credit scoring, it’s understandable that some people think the system is fatally flawed. Some of my readers tell me they’re so angry about scoring and the behavior of lenders in general that they’ve cut up their credit cards and are determined to live a credit-free life.

The rest of us, though, live in a world where credit is all but a necessity. Few of us can pay cash for a home, and many need loans to buy cars. Credit can help launch or expand a business or pay for an education. And most Americans like the convenience of using credit cards. Although it’s true that improper use of credit can be disastrous, credit properly used can enhance your life.

If we want to have credit, we need to know how credit scoring works. Knowledge is power, and the tools I give you in this book will help you take control of your credit and your financial life.
