serializers, selecting, 254

- using surrogates, 270-275
- versus encoding, 241-243
- XmlSerializer option, 249-251
- service behavior, exposing through configuration, 233-236**
- service behaviors, 181**
 - concurrency, controlling, 184-186
 - concurrent calls, 199-201
 - concurrent instances, 195-199
 - concurrent sessions, 201-204
 - default concurrency, 187-188
 - exposing through configuration, 233-236
 - metadata, exporting and publishing, 204-207
 - session-level instances, 193-195
 - single instances, multithreading, 189-190
 - singletons, implementing, 190-192
 - transaction service behaviors, 223-224
- Service Configuration Editor, 380, 387-388**
 - listeners, configuring, 391
 - logging options, 389-390
 - sources, configuring, 391
 - tracing options, 389
- service contracts, 34, 37**
 - asynchronous request-response operations, 41-44
 - duplex operations, 46-52
 - client portion, implementing, 53-54
 - exposing over multiple bindings, 177-179
 - one-way operations, 44-45
 - synchronous request-response operations, 38-41
- service endpoint behaviors, implementing message inspectors, 227-230**
- service exceptions, managing, 411-414**
- service hosting,**
 - IIS, 292-294
 - ASMX features, enabling, 294-301
 - self-hosting, 301
 - hosting multiple services in one process, 305-308
 - in managed Windows service, 302-305
 - WAS, 288-291
 - WCF service
 - base address, defining, 308-311
 - endpoint address, defining, 308-311
- service hosts, 287**
- service identity, 332-334**
- service quota settings, configuring, 543-544**
- Service Trace Viewer, 36, 376**
 - Activity View, 393
 - Graph View, 395-397
 - logs, analyzing from multiple sources, 397-399
 - Message View, 395-396
 - Project View, 395
 - results, filtering, 400-402
- service-enabled workflows**
 - controlling access to, 454
 - declarative access control, 455
 - programmatic access control, 455-457
 - hosting, 441
 - in IIS, 443
 - self-hosting, 442
- service-oriented architecture, 503**
- services**
 - ASMX, implementing WCF clients, 27-31
 - calling from WF, 426
 - with custom activity, 430-433
 - with Send activity, 427-429

- clients, implementing, 17-22
 - configuration files, 13-16
 - exposing from WF, 433-443
 - hosting, 14-16
 - in IIS, 23-26
 - WebHttpBinding binding, 512-529
 - implementing, 8-12
 - multiple contracts and endpoints, 54-57
 - Web services, hosting, 530-531
 - session-aware channel shapes, 99**
 - session-level instances, 193-195**
 - sessionless bindings, controlling concurrency, 187-188**
 - sessions, controlling concurrency, 201-204**
 - shape change binding elements, 176**
 - shape changing, 98**
 - shared listeners, 384**
 - sharing**
 - ports between services, 542-543
 - type with NetDataContractSerializer, 260-264
 - short-running transactions, 207**
 - Silverlight clients, creating from metadata, 541-542**
 - single concurrency mode, 185-186**
 - single instances, multithreading, 189-190**
 - singletons, implementing, 190-192**
 - SOAP (Simple Object Access Protocol), 2, 404**
 - faults, 405
 - message contracts, 78
 - typed messages, 79-82
 - untyped messages, 82-87
 - sources, configuring in Service Configuration Editor, 391**
 - SSL**
 - over HTTP, 323-324
 - over TCP, 326-327
 - state of workflow, persisting on server, 452-454**
 - stock quote service binding example, 119-123**
 - streamed mode, 276-277**
 - streaming messages, 276-277**
 - surrogates, type serialization, 270-275**
 - SVC files, creating, 24-25**
 - SvcUtil.exe, 36**
 - synchronous request-response operations, 38-41**
 - System.UriBuilder class, 508-509**
- T**
- TCP connections, configuring, 549-550**
 - TcpBinding binding, client authentication, 330-332**
 - terms (WSDL), controlling, 58-60**
 - text encoding, versus binary encoding, 282-283**
 - throughput, 184**
 - tracing, 376-377**
 - E2E, 377-378
 - enabling, 378-381
 - shared listeners, 384
 - verbosity, 381
 - transaction flow, 215-220**
 - transaction managers, 221**
 - transaction protocols, selecting, 221-222**
 - transaction service behaviors, 223-224**
- transactions, 207**
 - ACID, 208
 - flowing across operations, 215-220
 - within a service, 208-215
 - transfers, 378**
 - transport channels, 91-93, 172-173**

transport security, 317-318, 322

- client authentication
 - digital certificates, 330-332
 - Windows credentials, 329
- client authentication, 327-329
- service identity, 332-334
- SSL
 - over HTTP, 323-325
 - over TCP, 326-327

trust, 320**two-way communication,
request-reply, 97****typed messages, 79-82****U****unhandled exceptions, 405-408****untyped messages, 82-84**

- SOAP headers, 85-87

upgrades/helpers, 175**URIs, 504, 508**

- building, 509
- format of, 507
- GET, 506-507
- parameters, 505
- parsing, 510

user-defined bindings, creating, 171**V-W****verbose tracing options, 381****versioning data contracts, 72-74****WAS (Windows Process Activation
Service), service hosting, 288-291****Web hosting**

- WebScriptServiceHost class, 530
- WebScriptServiceHostFactory class,
530-531

**Web services, 131. *See also advanced
Web services***

- communication, basicHttpBinding
binding, 132-135

WebHttpBinding binding, 511

- hosting, 512-514
- WebGet attribute, 514
- WebInvoke attribute, 514-515
- WebOperationContext class, 523-529

WebMessageEncoder, 284-285**WebOperationContext class, 523-529****WebScriptServiceHost class, 530****WebScriptServiceHostFactory class,
530-531****WF (Windows Workflow
Foundation), 423**

- services, exposing, 433-443
- WCF integration, 424-425
- WCF services, calling, 426
 - with custom activity, 430-433
 - with Send activity, 427-429

**WICN (Windows Internet Computer
Names), 469****Windows authentication, 335****Windows Contacts, 482-483****Windows credentials**

- authentication, 343-346
- authorization, 346-348
- client authentication, 329

Windows Integrated Security, 340

- examples, 341-343

Windows Vista, P2P application**collaboration, 480**

- invitations, 483-491
- People Near Me, 481
- Windows Contacts, 482-483

**WMI (Windows Management
Instrumentation), 387****workflows**

- context, handling, 450-451
- correlation, 444-445
- durability, 444-445
- long-running, 445-450
- service-enabled, controlling access
to, 454-457
- state, persisting on server, 452-454

writing

- custom activities, 430-433
- WCF clients in code, 18-22
- WCF service, 8-12
 - configuration files, 13-16

WS-* specifications, 135**WS-AT (Web Service Atomic Transactions), 215**

- selecting, 221-222

ws2007HttpBinding binding, communication using advanced Web services, 140-143**WSDL (Web Service Description Language), 34-36**

- terms, controlling, 58-60

wsHttpBinding binding, 115

- communication using advanced Web services, 137-139
- message security, 335

X-Z**XML schema**

- class hierarchies, defining, 66-67
- defining for .NET class, 62-65

XmlSerializer option, 249-251

- custom serialization, 277-281
