

Building and Editing an On-The-Go Playlist

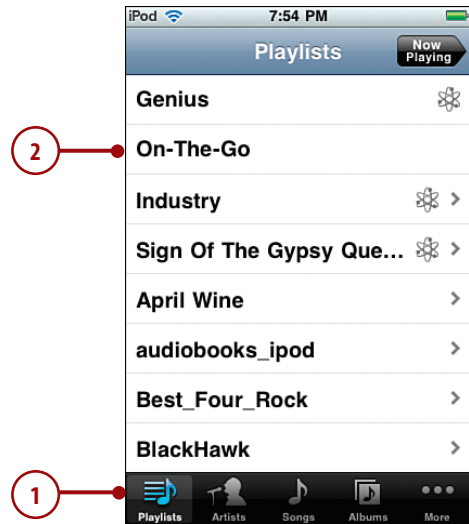

You can build a special playlist on iPod touch by selecting songs to include in your custom playlist. This is called the On-The-Go playlist because, well, you build it while you are on the go.

Creating and Listening to an On-The-Go Playlist

1. Move to the Playlists screen.
2. Tap On-The-Go. The Songs screen appears.

Add from Anywhere

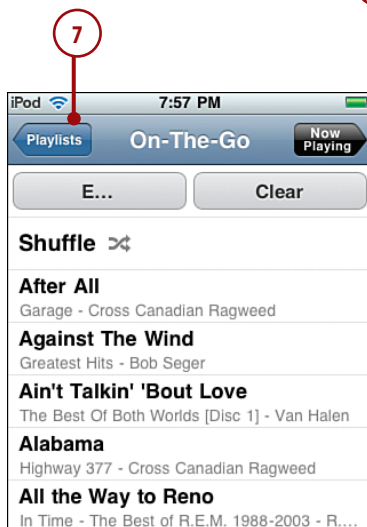

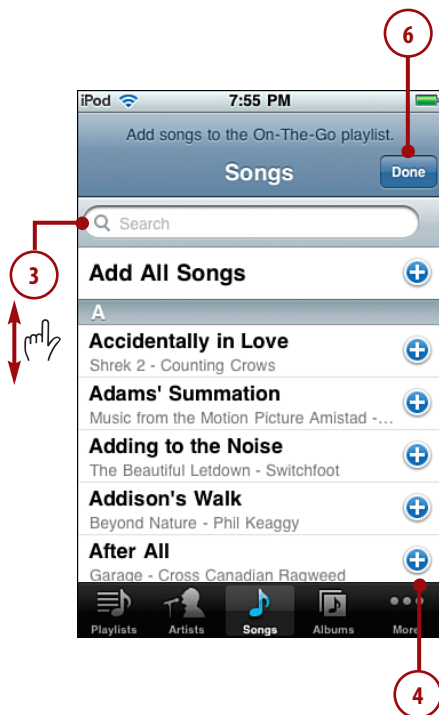

While you're in Playlist-building mode, you can add content from any iPod screen. For example, to add content by artist instead of by song, tap the Artists button. The Artists screen appears. Tap the artist whose music you want to add to the playlist and add the songs by that artist by tapping those songs or clicking the Add buttons. You can add content by genre, composer, and so on in the same way.

3. Browse all the songs on iPod touch or scroll to the top of the screen and search for songs.
4. To add a song to the playlist, tap the song or the Add button. After you add a song, it is grayed out to show it's already part of the playlist. You can add the same song to the playlist only one time.
5. Repeat steps 3 and 4 until you've added all the songs that you want the playlist to contain.
6. Tap Done. You move to the On-The-Go playlist screen and see the songs it contains.
7. Play the On-The-Go playlist just like playlists you've moved from the iTunes Library.

All at Once

You can add all the songs shown on any screen by tapping Add All Songs.

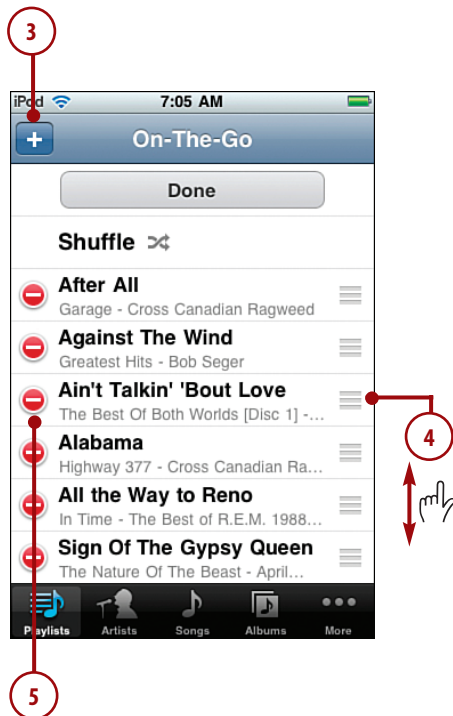

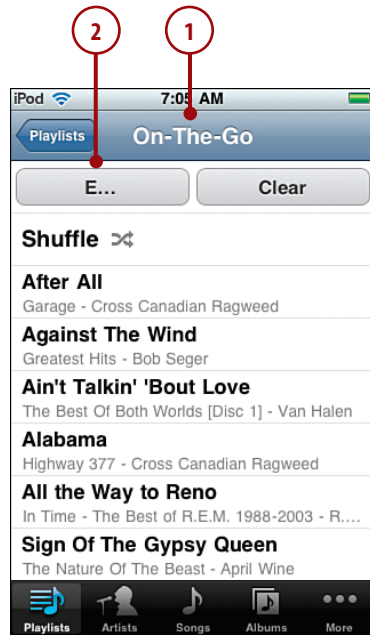

Changing an On-The-Go Playlist

1. Move to the Playlists screen as described in the previous task and tap the On-The-Go playlist option. You see the On-The-Go playlist screen.
2. Tap Edit. The screen changes to Edit mode.

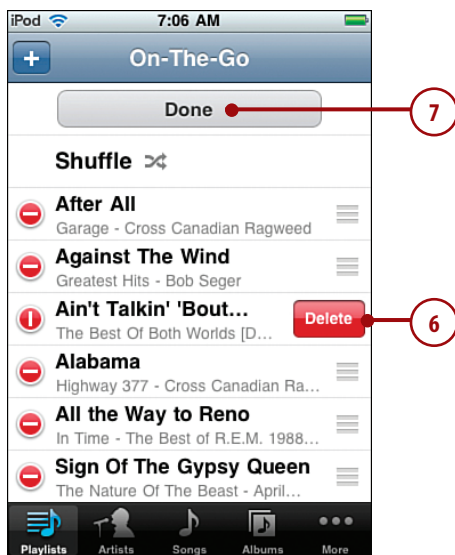

Clear It

To remove all songs from a playlist, tap Clear and then tap Clear Playlist again. The playlist is returned to an empty state.

3. To add songs, tap the Add button; this works just like when you added songs to the playlist originally. (See the previous section for details.)
4. To change the order in which songs play, tap the List button and drag a song to its new position on the playlist.
5. To remove songs, tap the Unlock button. The Delete button appears.

6. Tap Delete. The song is removed from the playlist.
7. When you're finished making changes, tap Done. You move back to the On-The-Go playlist screen.

SAVING THE ON-THE-GO PLAYLIST

When you sync iPod touch, the On-The-Go playlist moves into your iTunes Library where you can work with it just like playlists you create in iTunes. For example, you can change its name, its content, and so on.

Each time you change the On-The-Go playlist on iPod touch, a new version is created. When you sync, that version moves into iTunes, and its name is updated with a sequential number, as in On-The-Go1, On-The-Go2, and so on. Each version becomes a new playlist in your iTunes Library.
