

Using the Songs Tool to Find Music

You can use the Songs tool to easily find specific songs.

1. On the Home screen, tap the Music button.
2. Tap Songs. You see a screen showing all of the songs on the iPod touch, organized alphabetically. Under each song, you see the artist and album from which the song comes.
3. Drag your finger up and down the list to browse all available songs. (If you browse to the top of the screen, you see the Search tool with which you can search for specific songs. See “Searching for Music” later in this chapter.)
4. To jump to a specific song, tap the letter along the right side of the screen for the song’s name; to jump to a song whose name starts with a number, tap the # sign at the bottom of the alphabetical index.
5. Tap the song you want to play. The song begins to play, and the Now Playing screen appears.

6. Use the Now Playing screen to control the music (covered in detail in the "Playing Music" task later in this section).
