

Using an iPod touch as a Timer

The Timer counts down for a specific period of time and then notifies you when that amount of time has passed.

1. On the Home screen, tap Clock. The Clock screen appears.
2. Tap Timer. The Timer screen appears.
3. Drag the hour wheel up or down until the center bar shows the hour you want to set on the timer; you can select a timer up to 23 hours.
4. Drag the minute wheel up or down until the center bar shows the minute you want to set on the timer.
5. Tap When Timer Ends. The When Timer Ends screen appears.
6. Browse the action and sounds available. At the top of the screen, you see the Sleep iPod command, which shuts down iPod actions when the timer expires. Under that, you see the iPod touch's standard sounds.
7. Tap the action or sound you want to associate with the timer. What you select is marked with a check mark. Any sound you select plays.
8. Tap Set. You return to the Timer screen, which shows the sound or action you selected.

9. Tap Start. The countdown begins. When the countdown ends, an onscreen message appears, and the sound you selected plays, or the iPod functions go to sleep if you selected that action.
10. To change the sound or action while the timer is counting down, tap When Timer Ends and use steps 6 through 8 to choose a different sound or action.
11. To stop the timer, tap Cancel. The timer stops, but your most recent settings remain.

When a timer gets to 0, you see an onscreen message and hear the sound associated with the timer. (If the timer has the Sleep iPod action, you don't hear or see anything, but any music or video playing stops.)

Putting an iPod touch to Sleep

If you choose the Sleep iPod action, when the timer ends, any iPod functions pause. This is useful when you want music or video to stop playing after a specific time. This works just like a sleep timer on a TV.

Tap to stop the timer's alert.
