# Ch12. McKinsey 7S

## Short Description

- The McKinsey 7S model is a diagnostic management tool used to test the strength of the strategic degree of fit between a firm's current and proposed strategies.
- It is a management tool designed to facilitate the process of strategy implementation within the context of organizational change.

# Ch12. McKinsey 7S

## Background

- Idea that structure will follow strategy had been a prominent concept in modern strategy theory.
- Consultants at McKinsey & Co. recognized a circular problem central to their client's failure to effectively implement strategy, and co-developed the McKinsey model.
- Successful implementation of strategy requires management of the interrelationships between seven elements.

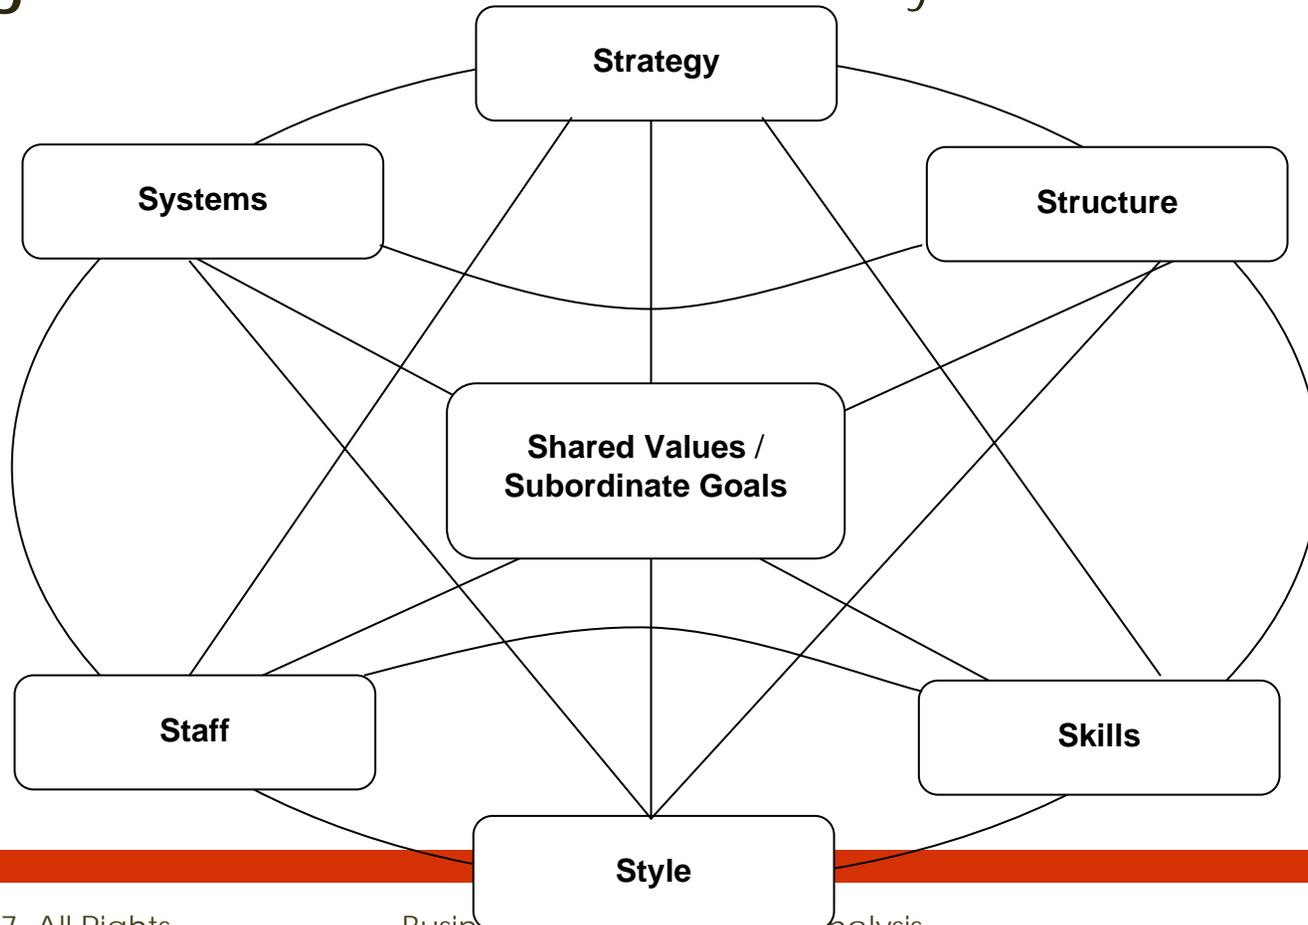

# Ch12. McKinsey 7S

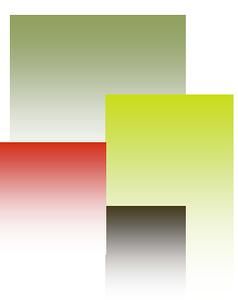

## Background

- Seven elements are:
  1. Structure
  2. Strategy
  3. Systems
  4. Style
  5. Staff
  6. Skills
  7. Shared values

# Ch12. McKinsey 7S

**Background:** Schematic of the McKinsey 7S Framework.

# Ch12. McKinsey 7S

## Background

- There are four key insights which can be derived from this model:
  - Five other elements comprise organizational effectiveness in addition to the traditional strategy and structure.
  - The lines connecting each element identify the mutual dependency between each element.
  - Strategic failure may be attributable to inattention to one or a combination of seven elements.
  - The circularity of the model focuses the analyst's attention on the absence of hierarchical dominance.

# Ch12. McKinsey 7S

## Strengths and Advantages

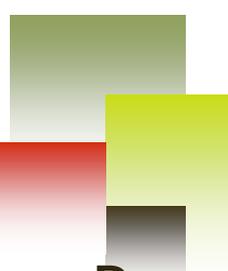

- Emphasis on a firm's strategy implementation.
- Organizational effectiveness was not dependent on just strategy and structure.
- Comprehensive because the analyst must consider each of the seven constructs, and how they interact.
- First model to meld the "hard" and "soft" aspects of the enterprise.
- Emphasizes coordination of key tasks.
- Model was also one of the first to help connect academic research with managerial practice.

# Ch12. McKinsey 7S

## Weaknesses and Limitations

- May miss some fine-grained areas in which gaps in strategy conception or execution can arise.
- Little empirical support for the model or of its originator's conclusions.
- Remains difficult to properly assess the degree of fit.
- Difficult for analysts to explain what should be done for implementation using the model.
- The 7S is mostly a static model.

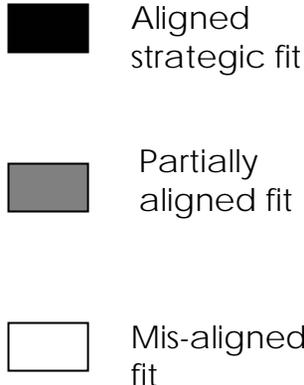

# Ch12. McKinsey 7S

## Process for Applying the Technique

- The first step is to closely examine each 'S'.
- The key success factors for each element need to be identified.
- Can create a 7 X 2 matrix with the top row containing critical features of each 'S' that the company does extremely well.
- The bottom row would contain the elements of each 'S' where the company is achieving sub-par performance. (Waterman, 1982)
- This matrix can be extremely useful in organizing the analysis.

- Process for Applying the Technique

	Structure	Strategy	Systems	Style	Staff	Skills	Shared Values	
Structure	Aligned	Partially	Partially	Mis-aligned	Mis-aligned	Aligned	Mis-aligned	
Strategy	Mis-aligned	Aligned	Mis-aligned	Mis-aligned	Mis-aligned	Mis-aligned	Mis-aligned	
Systems	Partially	Partially	Aligned	Partially	Partially	Partially	Partially	
Style	Mis-aligned	Mis-aligned	Mis-aligned	Aligned	Mis-aligned	Mis-aligned	Mis-aligned

# Ch12. McKinsey 7S

## Process for Applying the Technique

- After isolating the strategic distance between the seven elements of strategic fit, there are essentially three options:
  - The firm can work to change the required components of each 'S' so that they are consistent with strategy.
  - It can change the strategy to fit the existing orientation of the other six elements of the model.
  - Often, a compromise between each option is the realistic alternative.

## Case Study: Privatization of Kenya Airways

- Kenya Airways was originally established in 1977 as a corporation owned by the Kenyan Government.
- Senior management was appointed by politicians and had virtually no airline experience.
- The company lacked structure and direction, had very little equipment (seven planes), and was burdened with high interest foreign currency loans.
- By 1991 the airline was losing market share due to poor service and unreliable flight schedules and its debts were an enormous strain on the Kenyan Government.

## Case Study: Privatization of Kenya Airways

- In 1991, the commercialization process began.
- A new and capable management team was hired.
- Needs of all stakeholders were identified
- IT department was created to introduce new consistent systems and controls for accounting, scheduling, operations, management, and ticketing.
- By 1994, the airline recorded its first profits.
- 1995 created a strategic alliance with KLM Royal Dutch Airlines.
- In 1996 the Kenyan Government sold 26% of its stock to KLM, and most of the remainder of its stock to the Nairobi Stock Exchange, leaving only a 22% minority ownership block held in the airline.
